cognizant

CIS INFRA · INTERNAL OFFERING PROPOSAL · FOR SENIOR LEADERSHIP REVIEW

AI Platform / Landing Zone

A governed Azure foundation for one funded AI workload, then the next

Assess, extend an existing landing zone, or establish a new foundation · US, Europe, UK and Middle East pursuits

PROPOSED OFFERING

An accepted AI platform in 12 to 20 weeks, not hours sold

Problem AI pilots stall at the platform: network, identity, environments, capacity and support ownership are unresolved.

Offer CIS Infra assesses, extends or establishes the Azure foundation for one approved workload, reusing Microsoft's AI Landing Zone accelerator.

Outcome An accepted, repeatable environment with tested controls, cost visibility and a named operating owner.

Value Weeks from approval to first production AI workload; governed Azure consumption for Microsoft.

Decision requested

- Nominate a sponsor and tower leads for a 90-day validation
- Adopt assess, extend, establish and transition as the packages
- Accept labelled estimate ranges for go or no-go

Limit: Proposed offering. No approved rate card, staffing commitment or customer evidence yet.

DRIVERS SOURCED, DEMAND TO VALIDATE

AI workloads reach production faster on a ready platform

Pilot to production

Microsoft guidance now expects AI workloads in governed landing zones with private networking.

Source: Cloud Adoption Framework, AI Ready

Models change yearly

gpt-4.1 retires 14 Apr 2027 and gpt-5.4 on 2 Sep 2027. Platforms must absorb model churn.

Source: Foundry retirement schedule, checked 11 Oct 2026

Regulation is landing

EU AI Act high-risk obligations apply from 2 Dec 2027 (Annex III).

Source: Orrick (third party); EUR-Lex not verified

Who buys

Platform or infrastructure leader as sponsor, with CIO funding, the business workload owner and a CISO delegate.

What triggers the purchase

A pilot blocked by network, identity or environment gaps; repeated manual setup; unclear support ownership.

No pipeline or customer demand is claimed. Account shortlist and qualification scorecard: appendix Q1.

PROPOSED PORTFOLIO

01 builds the platform every other offering runs on

Microsoft ecosystem around the portfolio

M365 Copilot

Owned by Cognizant M365 and D365 teams; CIS Infra supplies

HANDOFF

Copilot Studio

Agents covered as a runtime in offerings 02 to 05

COVERED RUNTIME

Agent 365

Microsoft agent control plane; configure before any custom build

CONFIGURE FIRST

API Center

Registry for APIs and MCP tools, beside API Management

CIS INFRA BUILDS

Receives from 04 Capacity and FinOps

Deployment type, processing boundary, quota plan

Hands to 03 Gateway and 02 Governance

Network, identities, hosting and telemetry

Hands to 05 Managed Operations

Accepted platform, runbooks and cost baseline

PROPOSED SCOPE

We build and prove the platform; workload teams own the rest

Included: CIS Infra delivers

- Subscriptions, policy, tags
- Hub links, private endpoints, DNS
- Foundry project and model endpoint
- Monitoring, budgets, recovery
- Integrated plan and handover

Optional: priced separately

- More workloads or regions
- Disaster recovery
- AI Gateway (offering 03)
- Agent governance (offering 02)
- Operations (offering 05)

Other owners

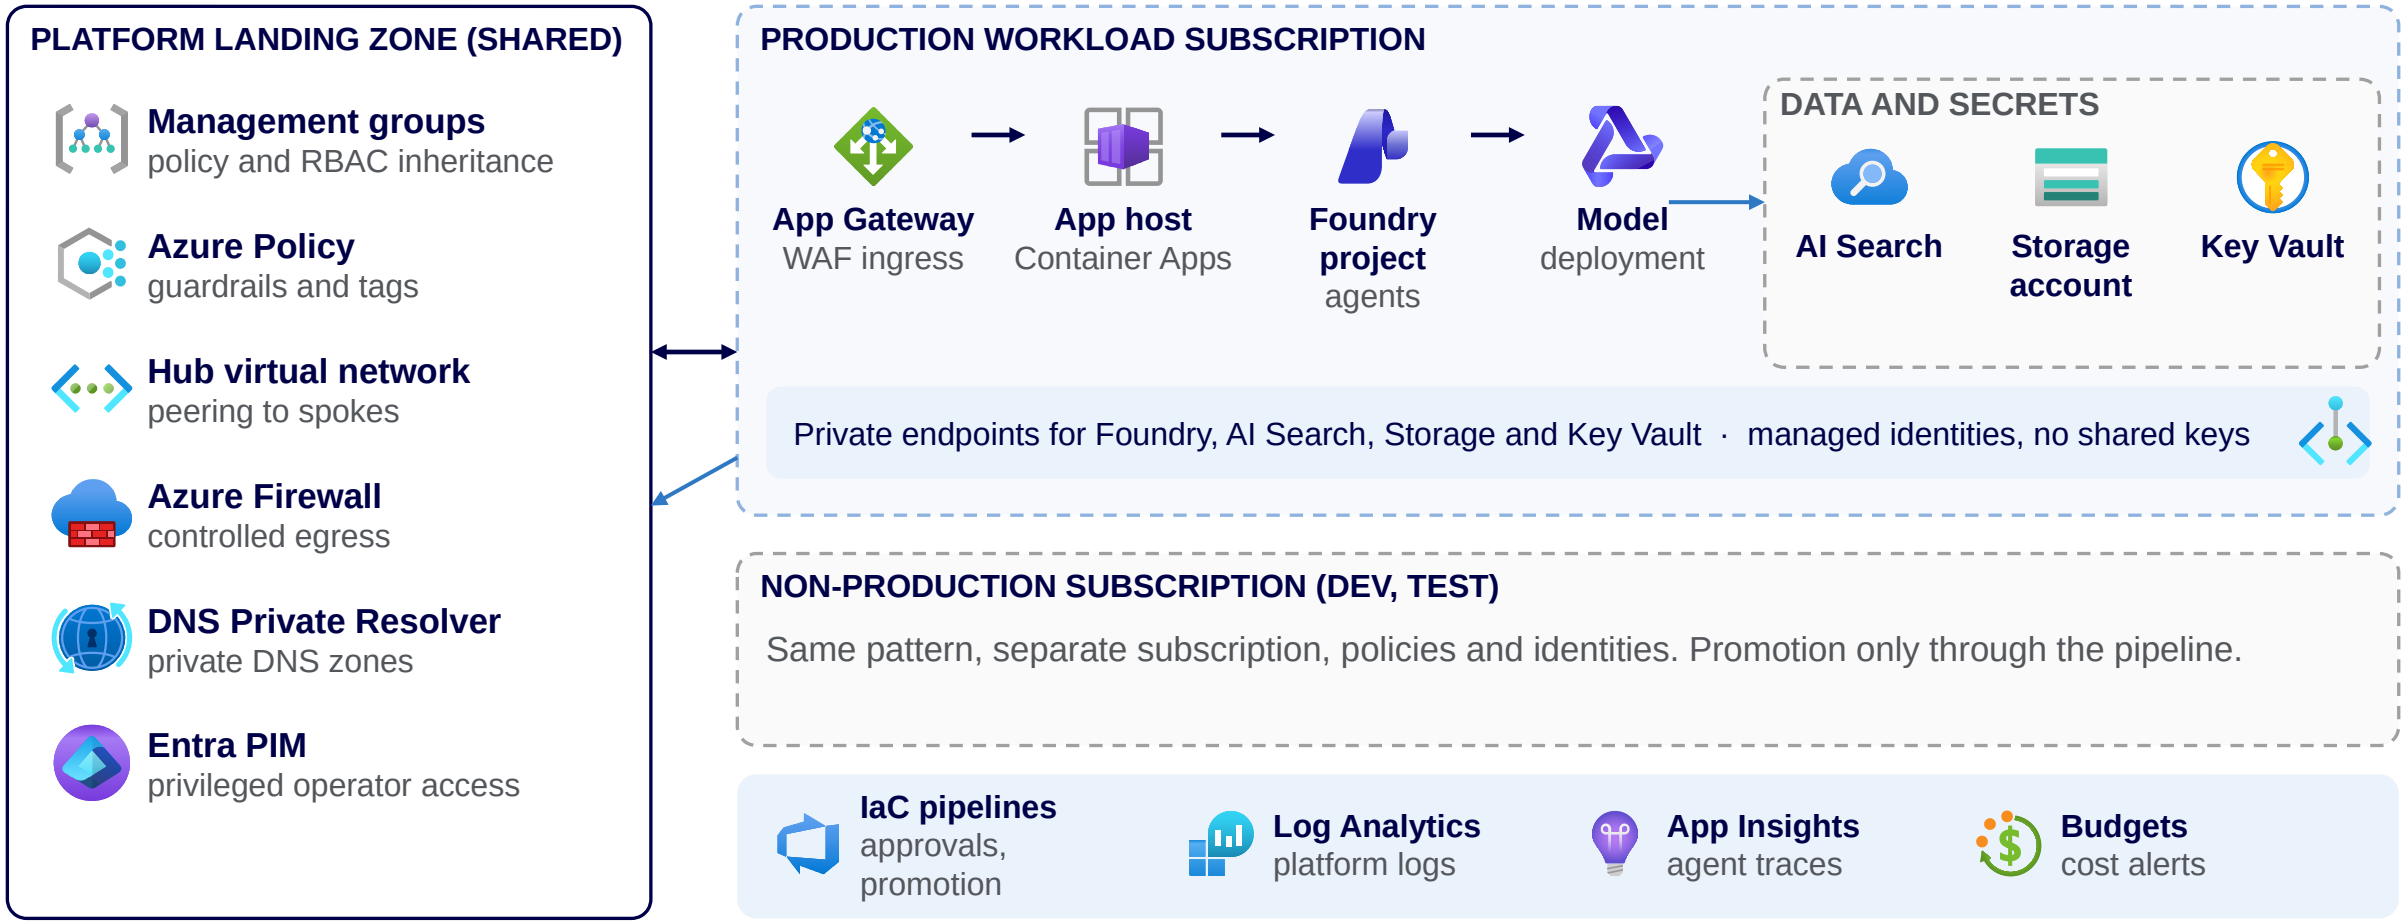

- Security: control design
- DevOps: Terraform pipelines
- AI: models, agents, quality
- Data teams: data and ingestion
- Customer: data rights, risk

Limit: CIS Infra does not own model quality, application behaviour, data quality or security operations.

PROPOSED REFERENCE ARCHITECTURE

cognizant

A shared platform keeps each AI workload private

Request / data flow Data access Double arrow: hub peering. Blue arrow: egress to hub firewall. Detail: appendix A5, A6.

Proposed reference architecture · CIS Infra custom design · not a Microsoft-published or Microsoft-endorsed architecture

PROPOSED PACKAGES

Three routes in, all on Microsoft’s landing zone accelerator

Assess first

When: Unknown access, connectivity or capacity

Result: Gap register and priced plan

Extend

When: Mature landing zone in place

Result: AI environments added to it

Establish

When: Platform gaps or new tenant

Result: Platform baseline plus AI environments

Shared accelerator: Microsoft AI Landing Zone (Agent and AI Gateway landing zones, Bicep and Terraform on Azure Verified Modules)

Then: Transition package hands an accepted platform to managed operations (offering 05)

ESTIMATE, NOT APPROVED

Assess in 3 to 5 weeks; establish in 12 to 20 weeks

Package	Effort (role days)	Elapsed time	Indicative fee band*
Assess first	15 to 30	3 to 5 weeks	$15k to $30k
Extend existing landing zone	70 to 110	8 to 12 weeks	$70k to $110k
Establish new foundation	140 to 220	12 to 20 weeks	$140k to $220k
Operational transition	15 to 30	4 to 6 weeks	$15k to $30k

What moves an engagement to the high end: unvalidated hub or DNS, extra environments or regions, more data sources, regulated-industry controls and slow customer approvals.

Note: *Fee band = role days x illustrative $1,000 per day. Not a Cognizant rate or quote. Azure and licence spend are separate.

Access, capacity and ownership decide success

No funded workload

Effect: An empty platform with weak value

Handle: Qualify with the scorecard; sell assessment only

Owner: Account lead

Model, region or capacity gaps

Effect: Redesign or delay

Handle: Check deployment type, quota and capacity in assessment

Owner: AI with CIS Infra

Tower capacity not committed

Effect: Critical path slips

Handle: Signed dependency register before quoting

Owner: Integrated service owner

Security and regulation late

Effect: Rework before go-live

Handle: Threat model and checkpoints in design phase

Owner: Security tower

Security threat model and regulatory notes: appendix SEC1 and SEC2.

TARGETS AFTER PILOT

Success is a reproducible build; choose the route today

Success measures

Reproducible build redeploy from code, rollback passes

Network controls allowed paths pass, denied paths fail

Cost visibility resources tagged with owner and cost centre

Operational readiness restore and containment drills recorded

Time to platform weeks from start to accepted environment

Decide today

- Sponsor and tower leads named
- Four packages as sales baseline
- Terraform owner: DevOps or CIS Infra

Decide after evidence or approval

- Approved rates and margin (Finance)
- Reuse saving from pilot
- External launch (after pilot)

90-day ask: budget and sponsor are inputs (deck 00 slide 10). Stop at day 45 if lab build not working.

APPENDIX

Technical and commercial appendix

Detailed architecture, networking, regional decisions, residency gate, delivery bench, account play, contract risk, RACI, cost layers and sources.

Appendix index

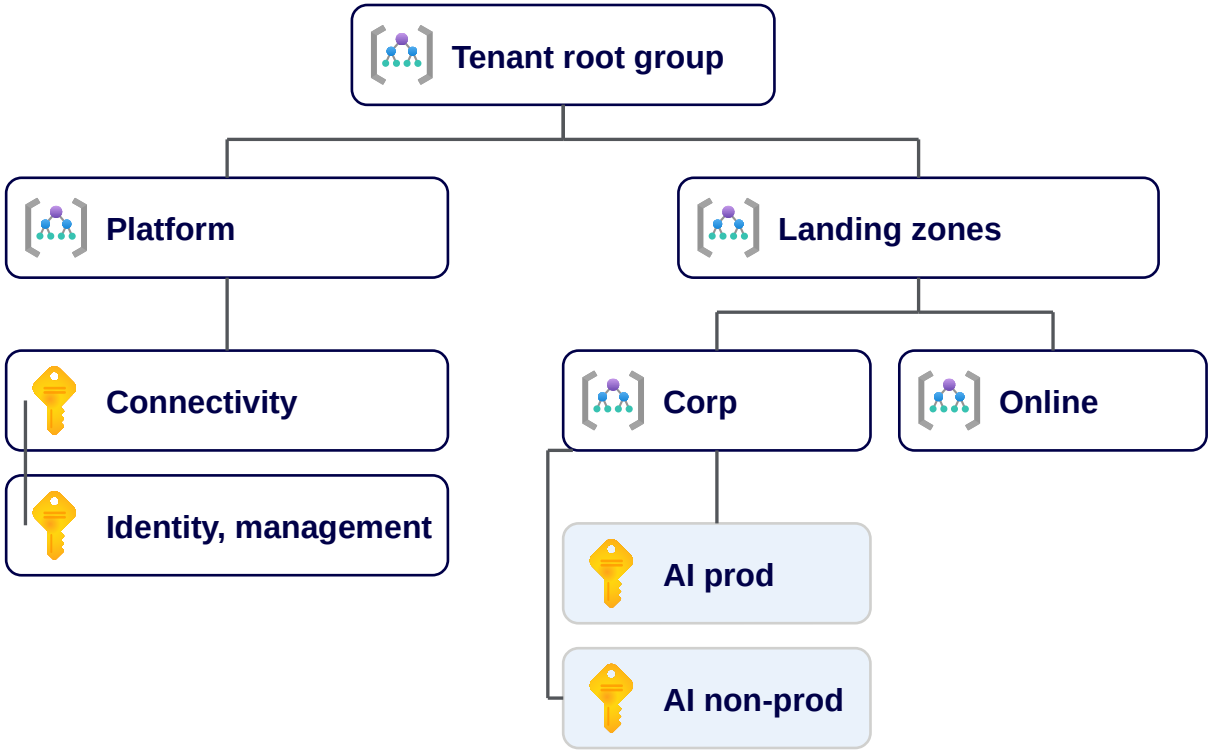

13 **A1** Extend versus establish: what changes
14 **A3** Governance: management groups, policy, tags
15 **A4** Identity, RBAC, managed identity, PIM
16 **A5** Network: hub, spoke, private endpoints, DNS
17 **A6** Controlled egress
18 **A8** Foundry workload baseline (simplified)
19 **A9** Foundry projects and agent hosting options
20 **A10** Search, storage and data dependencies
21 **A11** IaC, CI/CD and promotion
22 **A12** Environment separation
23 **A13** Monitoring, budgets, containment, recovery
24 **A14** Deployment types and processing boundary
25 **A15** Model availability snapshot by region
26 **A17** Acceptance gates and evidence
27 **A19** BOM checklist
28 **A0** AI Landing Zone accelerator reuse
29 **A20** Data platform paths and DR options
30 **RG1** Data residency qualification gate
31 **FP1** Fixed-price risk controls
32 **Q1** Qualification scorecard and account shortlist
33 **E1** Estimate assumptions
34 **SEC1** AI threat model and controls
35 **SEC2** Regulation and EU AI Act roles
36 **G1** Glossary
37 **DP1** Delivery bench and presales kit
38 **AC1** Account play and contract risk
39 **C1** Cost layers and pricing formula
40 **K** Kill-switch cross-reference
41 **R1** RACI matrix
42 **R3** Delivery and commercial readiness
43 **D1** Decision and approval register
44 **S1** Sources and verification dates
45 **S1b** Sources and verification dates (continued)

Extending a landing zone versus building a new one

Topic	Extend an existing landing zone	Establish a new foundation
Starting evidence	Accepted management groups, hub, DNS, policy and identity	Gaps, no platform, or a new tenant or region
CIS Infra builds	Workload subscriptions, spoke, private endpoints, AI resources, AI-specific policy	All of extend plus management groups, subscription vending, hub, DNS, firewall, identity integration
Main risk	Hidden gaps in the existing platform	Larger change surface and customer decisions
Customer decisions	Approve workload placement and AI policies	Platform design authority, connectivity, naming, policy baseline
Commercial basis	AI work packages only	Separate platform and AI work packages
Entry evidence	Validation checklist passes in assessment	Assessment gap register approved

Limit: New foundations are not included in an extension price. Existing shared hubs are reused only after validation.

Management groups, subscriptions, policy and tags

AI production and non-production are separate subscriptions under the Corp (or Online) group, inheriting platform policy.

Control	Minimum baseline (proposed)
Azure Policy	Allowed regions and deployment types; deny public network access for AI, Search, Storage, Key Vault; require diagnostics
Tags	owner, workload, environment, cost-centre, data-classification, agent-id (where applicable)
Subscription vending	Request, approval, naming and budget set at creation
Cost ownership	Budget and alert per subscription and workload
Exceptions	Time-bound, approved by customer risk owner

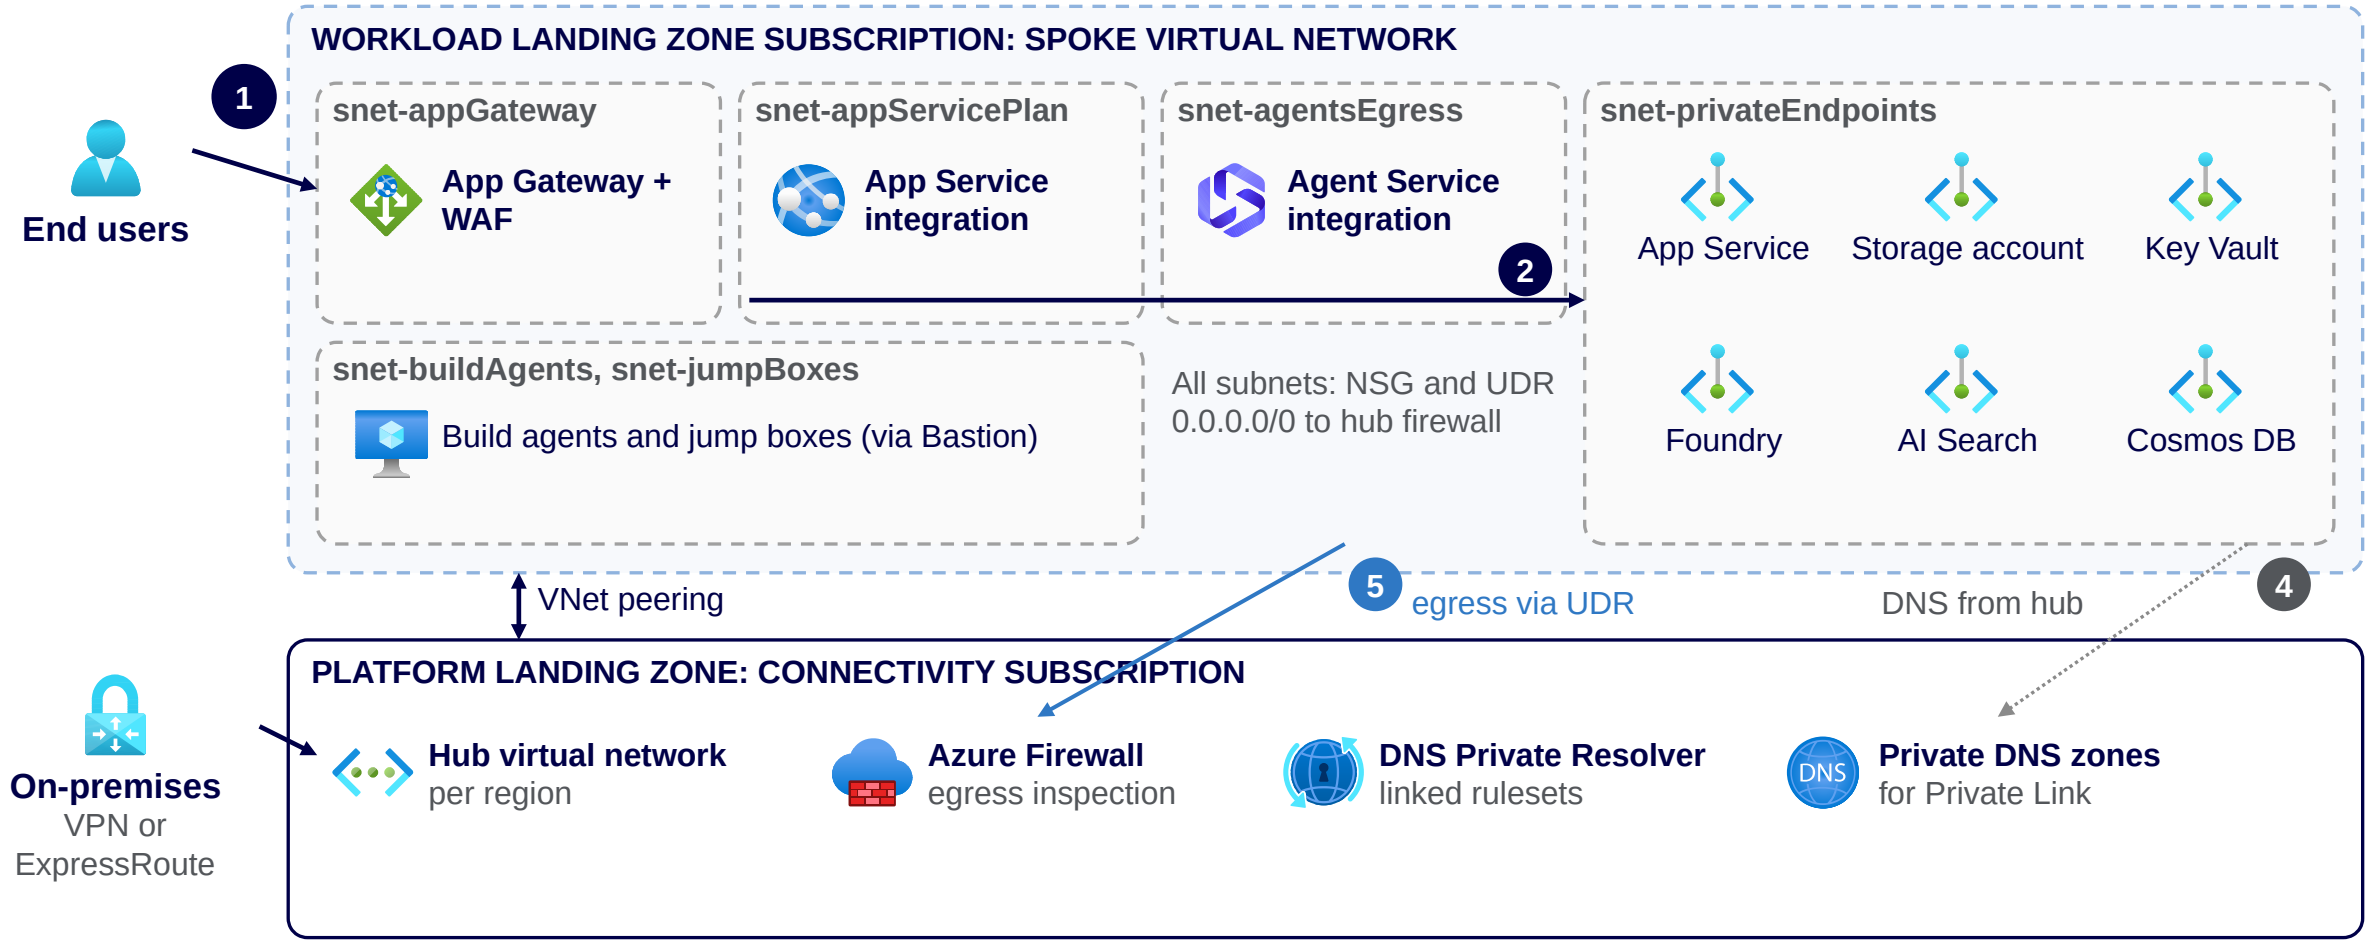

Identity, RBAC and privileged access

Identity type	Used for	Control	Implemented by
Workload managed identity	App host to Foundry, Search, Storage, Key Vault	Least-privilege data-plane roles; local auth disabled where supported	CIS Infra
Agent identity	Agent calls to models, tools and data	Scoped per agent and version; mapped server-side	AI with Security
Deployment identity	Pipelines that create resources	Federated credentials; no long-lived secrets; scoped per environment	DevOps
Privileged operators	Platform administration and containment	Entra PIM, just-in-time, approval for production	Security designs, CIS Infra operates
Break-glass accounts	Emergency access	Monitored, tested, excluded from automation	Customer with Security

Managed Identities, Entra Privileged Identity Management and Key Vault are the core Azure services for this layer.

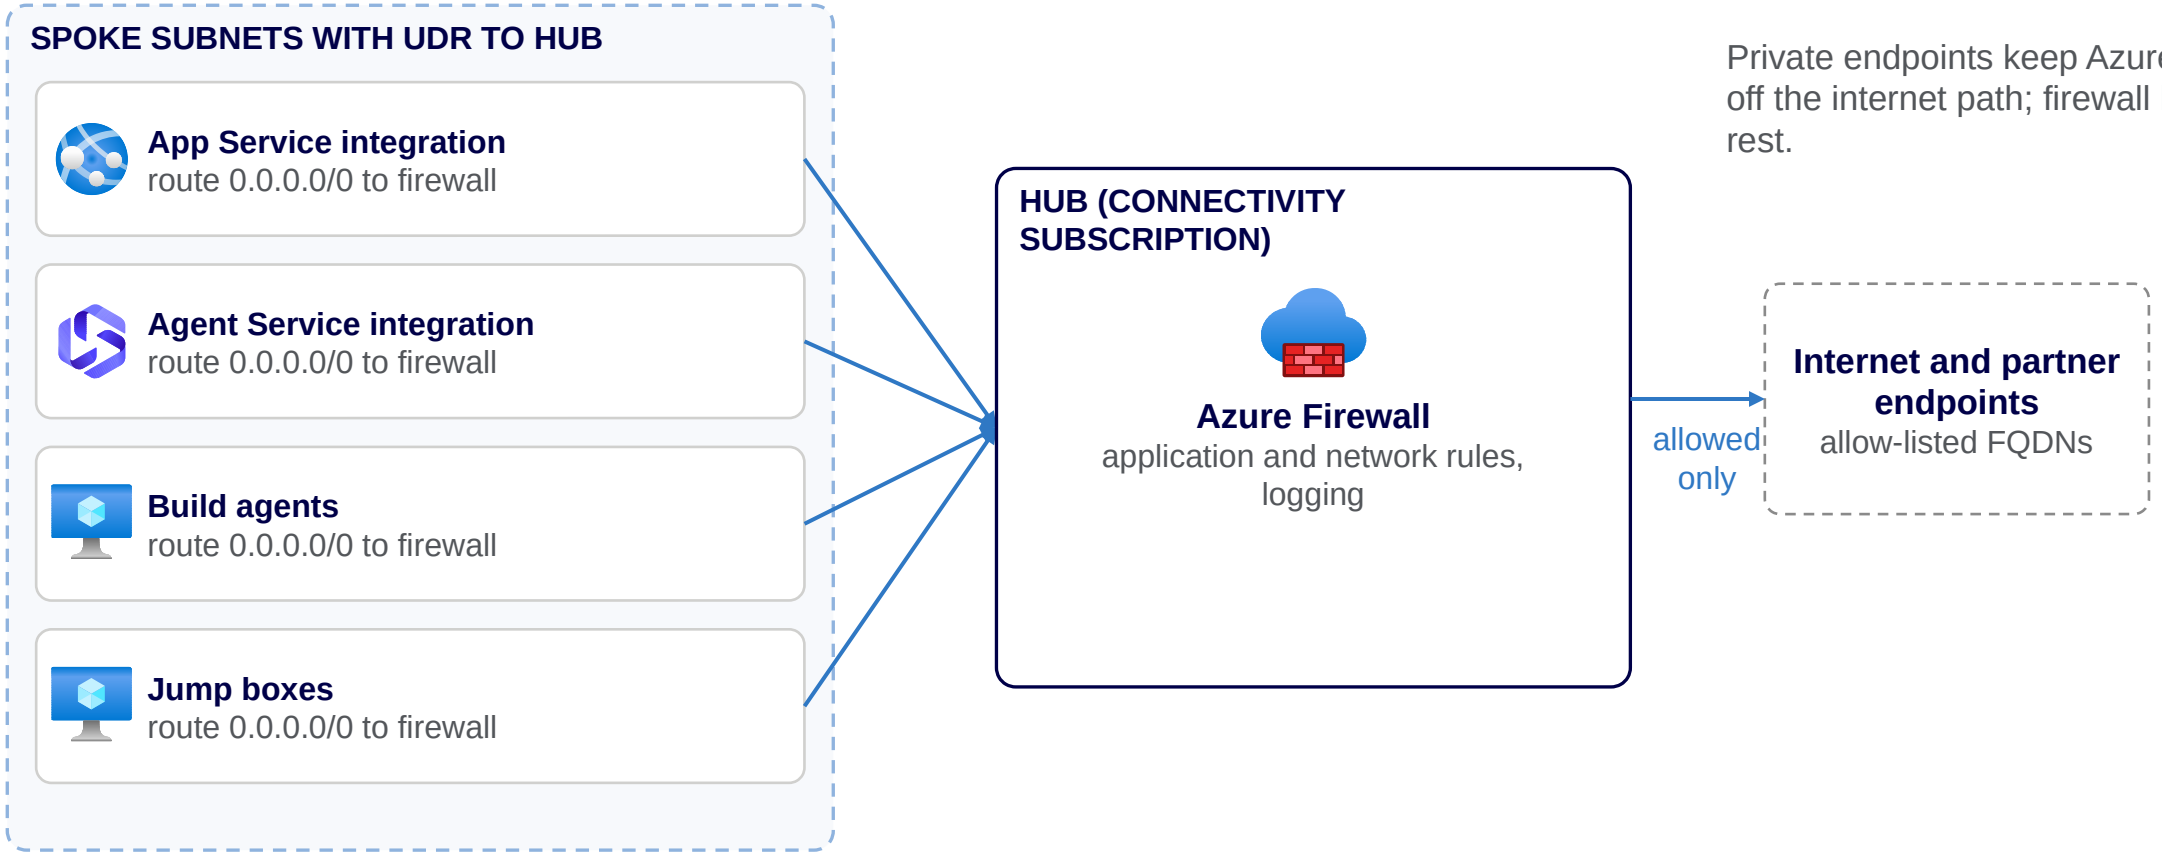

Hub connectivity, private endpoints and DNS

Request / data flow Data access Telemetry or state read Adapted from 11_baseline-landing-zone-networking.png

Adapted reference architecture · simplified from Microsoft source; validate subnets, DNS and routes per customer

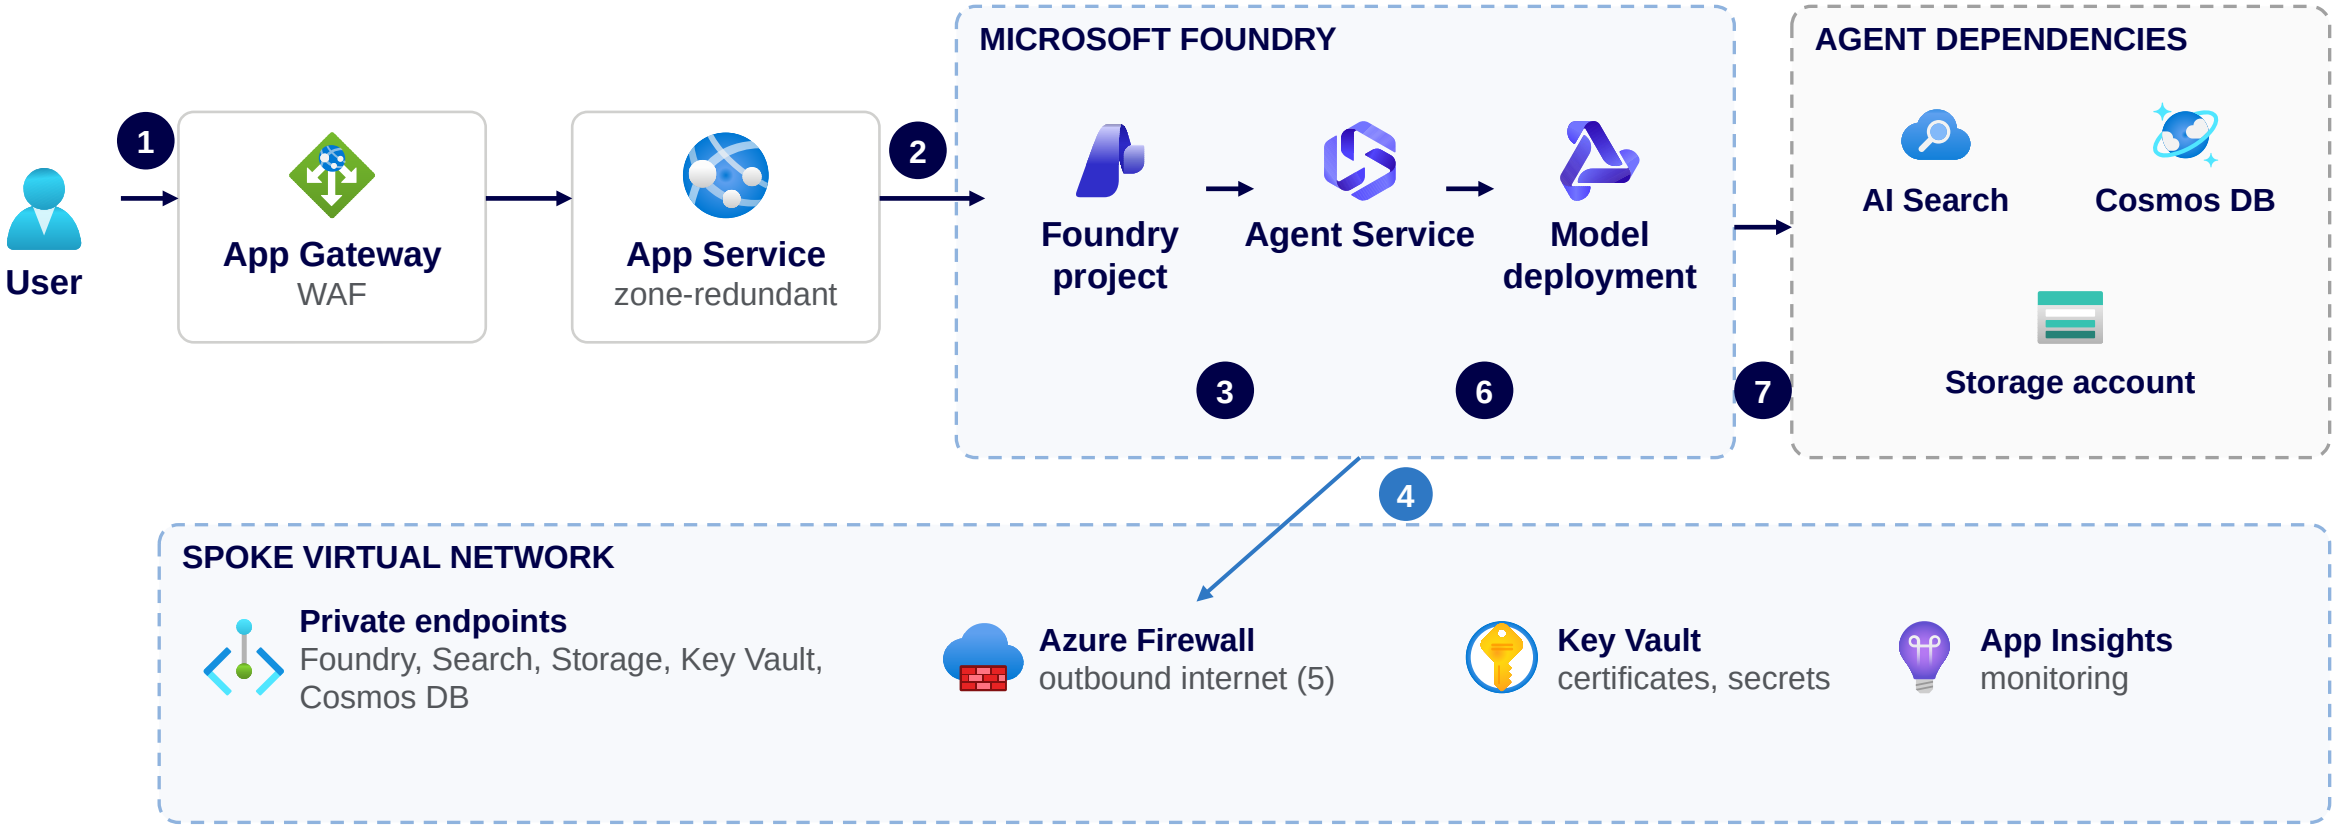

Controlled egress through the hub firewall

Limit: Validate effective routes and each managed service's egress support before enforcing forced tunnelling.

Adapted reference architecture · simplified from Microsoft source

Foundry workload baseline: request flow

Request / data flow Data access

Numbers follow the source diagram. Original: the original references pack.

Adapted reference architecture · simplified from Microsoft source; not a validated customer implementation

VERIFY PER ENGAGEMENT

Foundry projects, model endpoints and agent hosting

Hosting route	Platform pattern CIS Infra provides	Lifecycle control (verified)	Watch-outs
Foundry prompt agents and workflows	Foundry project, private endpoints, agent subnet	Stop when published; unpublished must be deleted to stop	Stop does not end existing runs
Foundry hosted agents	As above, plus compute quota	Start and stop; stop deallocates compute	Check region support
Customer-hosted (Container Apps, AKS)	Spoke subnet, identity, registry, ingress	Register as custom agent: Block or Unblock	Block covers proxy path, not host
Logic Apps agent loops	Logic Apps with VNet integration	Stop the Logic Apps resource	Stops every workflow in it; no traces

Item	Rule
Model endpoint	Approved deployment type and model version per environment; quota checked; processing boundary approved (appendix A14)

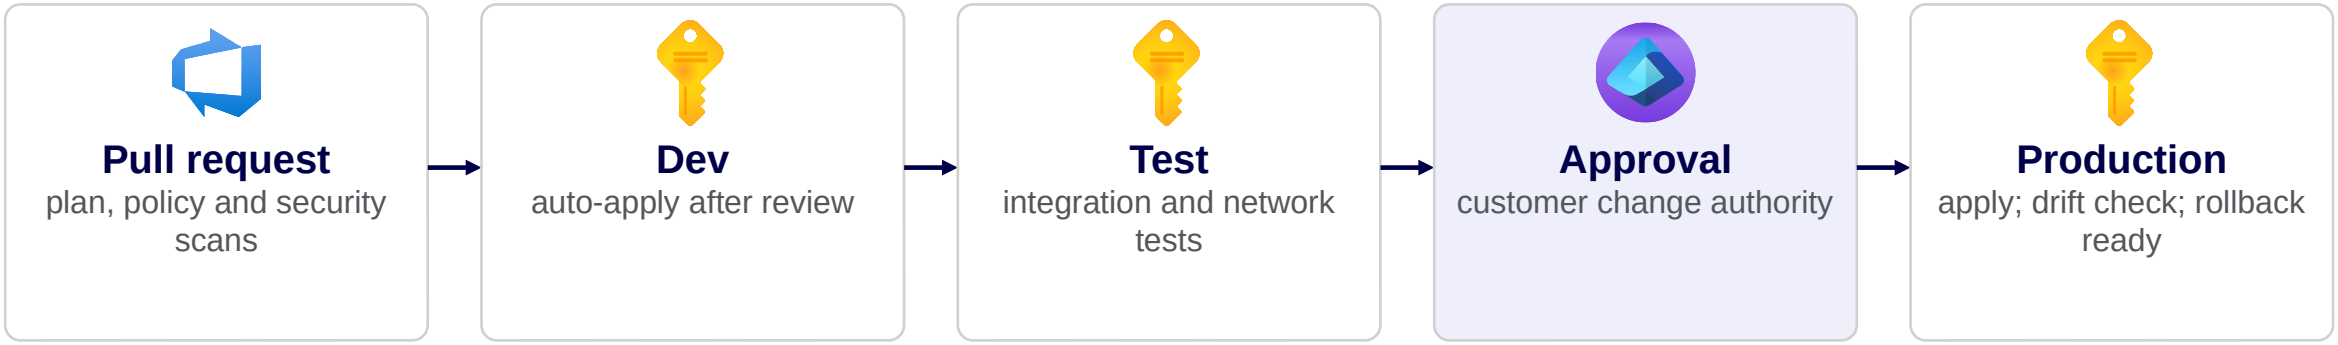

Search, storage and workload data dependencies

Dependency	Azure service	CIS Infra provides	Owned elsewhere
Retrieval index	Azure AI Search	Service, private endpoint, identity, diagnostics	Index design (Data); indexing pipelines (Data Eng.)
Documents and files	Storage account (blob containers)	Account, private endpoint, network rules, lifecycle policy	Classification and retention (Data); loads (Data Eng.)
Agent threads and state	Azure Cosmos DB	Account for Agent Service standard setup, backup policy	Data model (AI)
Secrets and certificates	Key Vault	Vault, RBAC, rotation alerts	Secret content (workload team)
Source systems	Customer systems	Network path and DNS only	Data rights and access (customer source owner)

Platform readiness does not imply data quality or permission propagation; those are separate acceptance gates.

Terraform, CI/CD, approvals and environment promotion

Control	Rule
State	Remote state per environment; locked; access by deployment identity only
Identity	Federated pipeline identity per environment; no stored secrets
Evidence	Plan output, test results and approval stored with each release
Rollback	Previous version redeployable; tested before acceptance

Development, test and production separation

Aspect	Development	Test (optional)	Production
Subscription	Non-production	Non-production	Production, separate
Data	Synthetic or masked	Approved test data	Live, per data owner approval
Model deployment	Standard, low quota	Same type as production	Approved type and processing boundary
Access	Engineers, PIM optional	Engineers via pipeline	Pipeline only; PIM for operators
Network	Private endpoints	Private endpoints	Private endpoints, WAF, egress firewall
Telemetry	Short retention	As production	Agreed retention; alerts routed

Monitoring, budgets, containment and recovery

Monitoring

Diagnostics to Log Analytics; Application Insights per Foundry project; alert rules with named owners

Budgets

Budget and alert per subscription and workload; model usage reported separately from platform cost

Containment hooks

Network and identity design that lets offering 02 block, cancel and deny (see appendix K)

Recovery

IaC redeploy, backups for stateful stores, restore drill recorded; RTO and RPO agreed per dependency

Limit: Log Analytics ingestion is a material consumption cost (East US 2 list: $2.76 per GB after the free allowance). Agree retention.

VERIFIED 11 OCT 2026

Processing location and residency are customer calls

Deployment type	Where prompts and responses are processed	Billing
Global Standard / Global Provisioned	Any Azure region where the model is deployed	Per token / reserved PTU
Data Zone Standard / Provisioned	Within the Microsoft data zone: US, EU or APAC	Per token / reserved PTU
Standard (regional) / Regional Provisioned	Within the customer-selected Azure geography	Per token / reserved PTU
Global or Data Zone Batch	As Global or Data Zone; 24-hour target, no real-time SLA	50% discount on tokens

Decision: No UK or Middle East data zone is published. Those pursuits need regional deployments or an approved Global boundary.

Approve both the resource region and the model processing boundary. Then verify model support, subscription quota and deployable capacity, which are three different things.

Model availability snapshot: gpt-5.4, selected regions

Deployment type	East US 2	Sweden Central	West Europe	Germany W. Central	France Central	UK South	UAE North
Global Standard	Listed	Listed	Listed	Listed	Listed	Listed	Listed
Data Zone Standard	Listed	Listed	Listed	Listed	Listed	Not listed	Not listed
Standard (regional)	Not listed	Not listed	Not listed	Not listed	Not listed	Not listed	Not listed
Global Provisioned	Listed	Listed	Listed	Listed	Listed	Listed	Listed
Data Zone Provisioned	Listed	Listed	Listed	Listed	Listed	Not listed	Not listed
Regional Provisioned	Not listed	Listed	Not listed	Listed	Not listed	Listed	Not listed

Limit: No UK or Middle East data zone exists. UAE North lists gpt-5.4 for Global only. Published support is not quota or capacity.

Regions chosen: East US 2 for US; Sweden Central, West Europe, Germany West Central, France Central for EU; UK South for UK; UAE North for Middle East.

Acceptance requires demonstrable evidence

Gate	Pass evidence	Approver
Reproducible build	Deployed from versioned IaC; drift explained; rollback passes	Customer platform owner
Connectivity	Approved paths pass; prohibited paths fail; DNS and egress recorded	Security with CIS Infra
Access controls	Agreed positive and negative permission tests pass	Security
Recovery	Scoped restore demonstrated; limitations documented	Integrated service owner
Costs and handover	Allocation and budget alerts tested; runbooks accepted by named owners	Customer service owner
Workload quality (separate)	Business-approved evaluation set meets thresholds	Customer workload owner

Bill of materials checklist for a defensible quote

Resource group	Required pricing fields
Connectivity	Firewall and gateway SKU, data processed, DNS resolver, private endpoints, egress
AI and data	Model, version, deployment type, token volumes or PTU; AI Search tier and replicas; storage and retention
Hosting and release	App or container compute SKU, replicas, registry, build agents
Operations	Log ingestion and retention, alerts, backup, Defender plans in scope
Every line	Region, quantity, environment, USD unit rate, meter, pricing date, monthly total

ESTIMATE, NOT PROVEN

Reuse Microsoft’s AI Landing Zone accelerator

Agent Landing Zone

Foundry-based agent platform with private networking

AI Gateway Landing Zone

API Management as AI gateway for Foundry models

Azure Verified Modules

Bicep and Terraform modules Microsoft maintains

Design checklist

Assesses brownfield estates against CAF and WAF

Where CIS Infra adds value	Estimated effort effect
Fit to existing hub, DNS, policy and identity	Main effort driver; not reduced by reuse
Deploy modules through customer pipelines	Reduced: modules exist
Close gaps (preview services, policy exceptions)	Adds effort; varies by customer

Data paths and disaster recovery options

Data path	Azure services	CIS Infra role
Documents and files	Storage account, AI Search	Private endpoints, identity, lifecycle
Enterprise analytics data	Microsoft Fabric, OneLake (if used)	Network and identity integration only
Operational systems	Customer sources via connectors	Network path and DNS

DR option	How it works	Cost driver	Recovery
Single region, rebuild	Redeploy from code; restore data	Lowest	Hours to days
Warm standby	Second region pre-built, scaled down	Second region baseline, data replication	Hours
Active-active	Two regions serving traffic	Double capacity, global routing	Minutes, if capacity exists

Limit: Model capacity in a second region is not guaranteed on demand. Test failover before quoting a recovery time.

UK and Middle East residency: check before you quote

Need	UK	UAE	Saudi Arabia
Model processing in country	Regional PTU in UK South only	Not available for gpt-5.4 (Global only)	Not listed
Processing within a data zone	No UK data zone (EU zone differs)	No Middle East data zone	No Middle East data zone
Pay-as-you-go processing	Global Standard (any region)	Global Standard (any region)	Not listed
Data at rest in region	Yes, with UK South resources	Yes, with UAE North resources	Check region services

Decision: Gate: if in-country model processing is required and not available, stop and agree an option with the customer before quoting.

Fixed price only after an assessment, with change triggers

1 Assess first
Short paid assessment before any fixed price

2 Name the triggers
Change triggers written into the SOW

3 Hold contingency
Amount set by Finance (input required)

4 Accept by gates
Evidence-based acceptance at each gate

Change trigger for this offering	Why it changes effort
New region or data residency need	Network, DNS, policy and capacity work per region
Inherited landing zone gaps	Remediation beyond the assessed baseline
Late access or approvals	Idle team and re-planning
More workloads than scoped	Extra spokes, identities and tests

Qualification scorecard and account shortlist template

Criterion (score 0, 1 or 2)	Evidence
Funded workload	Named owner, budget route, decision date
Platform authority	Who can approve tenant and network changes
Executive sponsor	Named and engaged
Data access	Source owner and rights confirmed
Region and capacity	Model, deployment type and quota checked
Data residency gate	UK or Middle East in-country need checked (deck 01)
Regulated bank	Model risk and DORA position known
Existing landing zone maturity	Design docs, policy, hub in place

Account shortlist (template, empty)

Account	Sponsor	Workload	Blocker	Score	Next action

Decision: Quote implementation at 14+ with no zero on funding, authority, sponsor or residency. Otherwise sell the assessment.

ESTIMATE, NOT APPROVED

How the effort and duration ranges were built

Package	Low case assumes	High case assumes
Assess first	One workload, one region, access granted in week 1	Several workloads, unclear ownership, slow access
Extend	Mature hub, DNS and policy; accelerator fits; one data source	Gaps found in hub or DNS; extra environment; two data sources
Establish	Single region, standard policy baseline	New tenant, new connectivity, regulated industry controls
Transition	Customer operations team ready	New operations model, offering 05 onboarding

Basis and recalibration plan

Basis: the GTM proposal V3 worked example (88 role days for a bounded landing zone extension), scaled by the drivers above. Recalibrate after every pilot: record actual role days per package, compare with the band, and reset bands each quarter. Owner: integrated service owner with Finance.

AI threat model: what can go wrong, and who controls it

Threat	Example	Control	Owner
Data exfiltration	Agent sends data to an external site	Private endpoints, firewall egress allow-list	CIS Infra
Credential theft	Keys in code or config	Managed identity, local auth off, Key Vault	CIS Infra with Security
Privilege misuse	Standing admin access	Entra PIM, approval for production	Security designs, CIS Infra runs
Supply chain	Unvetted modules or images	Verified modules, registry scanning, pipeline gates	DevOps
Prompt injection	Malicious content in retrieved documents	Content Safety, Prompt Shields, retrieval permissions	AI with Security
Logging gaps	No evidence during an incident	Diagnostics to Log Analytics, retention policy	CIS Infra
MCP tool trust boundary	Agent reaches an unapproved tool host	Private endpoints; tools only via the gateway (03)	CIS Infra with Security
Agent identity misuse	Agent identity with broad rights	Managed identities, least privilege, Conditional Access for agents	Security

Regulation: who holds which duty, and where we help

Party	Likely EU AI Act role (indicative)	What this offering supports
Customer deploying AI systems	Deployer (usually)	Network isolation, logging and access records
Customer building its own AI system	Provider	Platform documentation inputs for the technical file
Cognizant CIS Infra	Usually neither: infrastructure service provider	Role stated in the contract; Legal confirms

Area	Checkpoint	Status (checked 11 Oct 2026)
EU AI Act	Annex III high-risk duties from 2 Dec 2027; Annex I from 2 Aug 2028	Third-party summary (Orrick); EUR-Lex not verified
EU DORA	ICT risk and ICT third-party contract terms for financial entities	Applies from 17 Jan 2025 (EUR-Lex)
EU NIS2	Cyber risk management for essential and important entities	National laws; deadline 17 Oct 2024
UK	Regulator-led AI principles; UK GDPR	Not re-verified: confirm current position
UAE	Federal Decree-Law 45 of 2021 (personal data)	Executive regulations: verify status
Saudi Arabia	PDPL (enforceable Sep 2024); NCA cloud controls CCC-1:2020	Third-party summary; verify transfer rules
US banks	Interagency model risk guidance (17 Apr 2026) replaced SR 11-7	Generative and agentic AI out of scope; governance still expected

Glossary of terms used in this deck

Term	Meaning
A2A	Agent-to-agent protocol for agents calling other agents
Agent 365	Microsoft control plane to register, observe and govern agents (per-user licence)
API Center	Azure registry for APIs and MCP servers; decides which tools exist
APIM	Azure API Management; the gateway that controls traffic
Copilot Studio	Microsoft low-code tool to build agents; consumption in Copilot credits
Data Zone	Model processing inside a Microsoft data zone (US, EU or APAC)
DORA	EU Digital Operational Resilience Act for financial entities
FOCUS	FinOps Open Cost and Usage Specification for cost data exports

Term	Meaning
Foundry	Microsoft Foundry: Azure platform for models and agents
FTE	Full-time equivalent person
MCP	Model Context Protocol: standard way for agents to call tools
MRM	Model risk management (banking supervision)
NIS2	EU directive on cybersecurity for essential sectors
PAYG	Pay as you go: pay per token used
PDPL	Personal Data Protection Law (Saudi Arabia, UAE)
PIM	Entra Privileged Identity Management: just-in-time admin access

Term	Meaning
PTU	Provisioned throughput unit: reserved model capacity, billed per hour
RACI	Responsible, Accountable, Consulted, Informed
RFP	Request for proposal
RTO / RPO	Recovery time objective / recovery point objective
SOW	Statement of work
Token	Unit of text a model reads or writes; the main pricing unit
TPM	Tokens per minute

INPUT REQUIRED

Who delivers it, and what sellers need before day one

Role	Skills needed	Certification (verify current)	Ramp-up (estimate)	Bench now
Platform architect	Azure landing zones, Foundry, networking	Azure Solutions Architect Expert	2 weeks	Input required: delivery lead
IaC engineer	Terraform or Bicep, Azure Verified Modules, CI/CD	Azure DevOps Engineer Expert	2 weeks	Input required: delivery lead
Network engineer	Hub, private endpoints, DNS, firewall	Azure Network Engineer Associate	1 week	Input required: delivery lead
Identity engineer	Entra, PIM, managed identities	Identity and Access Administrator Associate	1 week	Input required: delivery lead

Presales kit item	Status	Owner
Executive deck, talk tracks, customer pitch	Exists (v4.0 draft)	Offering owner
Demo environment	To build	CIS Infra lab owner (input required)
SOW template and estimator	To build	Presales lead with Finance
RFP answer bank	Draft exists (register)	Presales lead
Case study	After first pilot	Account team
Lab landing zone build	To build	CIS Infra lab owner

How account teams use it, and the contract risks to manage

Fits in the account plan

Next step after a cloud or data platform programme in the account plan.

First deal (illustrative)

Assess $15k to $30k; establish $140k to $220k.

Expansion path

Gateway (03), agent governance (02), then managed operations (05).

Business-led entry

Head of operations: first AI workload live in weeks, not quarters.

Contract topic	Proposed position	Owner
Liability cap	Per Cognizant standard terms; no uncapped liability for agent behaviour or customer data	Legal
Service-level penalties	Only on response targets inside coverage hours; none on Azure availability	Legal with delivery
IP of accelerators and code	Cognizant keeps reusable accelerators; customer owns its configuration and code	Legal
Change control	New scope, regions or runtimes priced by change request	Delivery with Finance
Fixed price	Only after an assessment; change triggers in the SOW (FP1)	Delivery with Finance

Microsoft motion: engage the Azure specialist and cloud solution architect (Cloud and AI Platforms); drives Foundry, networking and monitoring consumption.

NO APPROVED QUOTE

Six cost layers are priced and owned separately

Layer	Applies to this offering	Pricing formula or unit	Missing input (owner)
1 CIS Infra services	Assessment, implementation, transition	Fixed fee; role days x approved sell rate	Sell rates (Finance)
2 Specialist towers	Security, DevOps, AI, Data, Data Eng. work packages	Tower role days x tower rate	Tower estimates (tower leads)
3 Recurring managed service	Optional, offering 05	Base + assets x rate + coverage	Service rates (Finance)
4 Azure platform consumption	Network, hosting, Search, Storage, logs	Azure meters x quantity, dated	Customer agreement prices (customer)
5 Model consumption	Tokens or PTU for the workload	Tokens x price, or PTU x hours or reservation	Volumes (AI tower); PTU rates (Microsoft)
6 GPU hosting	Not in baseline	Only if self-hosted inference is chosen (offering 04)	n/a unless selected

Revenue recognition (Finance owns): Fixed-price milestones per gate (assess, design, build, acceptance). Owner: Finance.

Limit: Layers 4 to 6 are customer Azure spend unless a resale agreement says otherwise. They are not CIS Infra services revenue.

Agent containment: how this offering contributes

1. **Block new requests**
   API Management ingress
2. **Cancel or isolate**
   runtime adapter
3. **Deny actions**
   outbound gateway, tool guard

What this offering provides

- Private endpoints and disabled local auth so agents cannot bypass the gateway
- Separate subnets and identities so a runtime can be isolated without affecting the hub
- Telemetry plumbing (Log Analytics, Application Insights) that containment verification depends on
- A restricted management boundary for the containment control plane

Note: No universal instant stop, and the design is unproven until the PoC passes. Deck 02 builds it; deck 05 operates it.

PROPOSED, VALIDATE WITH TOWERS

Delivery RACI: one accountable role per activity

Activity (proposed, validate with towers)	CIS Infra	Secu-rity	Dev-Ops	AI	Data	Data Eng.	Integr. service owner	Cust. work-load owner	Comm. / fin.
Platform design and integrated plan	A/R	C	C	C	C	C	R	C	I
Subscriptions, network, DNS, egress	A/R	C	C	I	I	I	I	C	I
Security control design and verification	R	A/R	C	C	C	I	I	C	I
Terraform modules and pipelines	R	C	A/R	I	I	I	I	I	I
Foundry project, model endpoint hosting	A/R	C	R	C	I	I	I	I	I
Data architecture and ingestion	C	C	I	C	A/R	R	I	C	I
Platform testing (build, network, access)	A/R	R	R	I	I	I	C	I	I
Platform service acceptance	R	C	C	I	I	I	R	A	I
Workload acceptance (quality)	I	C	I	R	C	C	C	A	I
Operational handover and runbooks	R	R	R	R	C	R	A	C	I
Containment hooks and recovery drill	R	C	C	R	I	I	A	C	I
Pricing, attribution and quote	C	C	C	C	C	C	R	I	A

A accountable (one per row) **R** responsible C consulted I informed. **Integrated service owner** = named Cognizant delivery lead for the end-to-end outcome.

Delivery and commercial readiness checklist

Item	This offering
Entry criteria	Funded workload, platform sponsor, data owner, deployment authority, tower commitments
Discovery inputs	Landing zone design, subscriptions, hub, DNS, identity, policy, region and model needs
Deliverables	Design, IaC, configured environments, test evidence, runbooks, handover pack
Scope boundaries	One workload, dev and prod, one region, one data pattern (reference)
Dependencies	Security, DevOps, AI, Data, Data Eng. work packages; customer approvals
Delivery phases	Assess, design, build, prove, transition (estimate per engagement)

Item	This offering
Acceptance criteria	Gates in appendix A17, agreed in the SOW
Customer responsibilities	Access, approvals, data rights, risk acceptance, named owners
Pricing units	Fixed assessment fee; role days per work package; capped transition fee
Change-control triggers	Environments, regions, connectivity, data sources, model or boundary change
Support handoff	Offering 05 or customer operations; runbooks and alert routing accepted
Success indicators	Gates passed first time; time to accepted environment; tag coverage

Decisions that need an owner and a date

Decision	Decide when	Proposed owner	Evidence needed
Nominate Infra sponsor and tower leads	Now	CIS Infra leadership	Named people and effort
Adopt three routes and scope boundaries	Now	Offering owner	This deck
Terraform ownership: DevOps or CIS Infra	Now	CIS Infra and DevOps leads	Who staffs and maintains modules
Sell rates, margin and attribution rules	Finance approval	Finance	Internal costing model
Reference estimate for extension	After pilot	Integrated service owner	Actual effort from validation
Approved demo environment and IaC assets	After pilot	CIS Infra	Working deployment
External launch and Microsoft alliance positioning	After pilot	Leadership	Offer card, evidence pack
