cognizant

CIS INFRA · INTERNAL OFFERING PROPOSAL · FOR SENIOR LEADERSHIP REVIEW

Agent Governance and Operations

Know every agent, prove how it is used, and prove the stop before relying on it

Configure Agent 365 and the Foundry Control Plane first, then build only the gaps · US, Europe, UK and Middle East pursuits

PROPOSED OFFERING

Configure Agent 365 first, then build only the gaps

Problem Agents spread across Copilot Studio, Foundry, custom hosts and other clouds. Few customers can list, own or stop them.

Offer Configure Agent 365, Foundry Control Plane and Entra agent identities; add usage evidence and a stop path proven in a pilot where they fall short.

Outcome Every in-scope agent has an owner, a usage status, a risk class and a rehearsed way to stop it.

Value Agents with an owner and a tested stop; audit findings closed with evidence.

Decision requested

- Adopt configure-before-build as the design rule
- Fund a 4 to 6 week kill-switch proof of concept
- Name who may stop and who may restart an agent

Limit: No universal instant stop and no complete inventory are claimed. Coverage depends on licences, runtimes and telemetry.

DRIVERS SOURCED, DEMAND TO VALIDATE

Agent 365 is GA and stops are not instant: act now

Agent 365 is GA

Since 1 May 2026 Microsoft offers one registry for Copilot Studio, Foundry and partner agents.

Source: Microsoft Security blog

Stop is not instant

Stopping a Foundry agent does not end runs already in progress.

Source: Foundry Control Plane docs, updated 15 Jul 2026

Audit questions arrive

EU AI Act and internal audit ask for an AI system inventory with owners.

Source: Orrick (third party); EUR-Lex not verified

Who buys

AI platform leader with the CISO delegate and IT service owner; internal audit often triggers the budget.

What triggers the purchase

Agent count growing faster than review; an incident or near miss; an audit request for an AI inventory.

No pipeline or customer demand is claimed. Account shortlist and qualification scorecard: appendix Q1.

PROPOSED PORTFOLIO

02 governs agents on the platform 01 builds

Microsoft ecosystem around the portfolio

M365 Copilot

Owned by Cognizant M365 and D365 teams; CIS Infra supplies

HANDOFF

Copilot Studio

Agents covered as a runtime in offerings 02 to 05

COVERED RUNTIME

Agent 365

Microsoft agent control plane; configure before any custom build

CONFIGURE FIRST

API Center

Registry for APIs and MCP tools, beside API Management

CIS INFRA BUILDS

Receives from 01 Landing Zone

Identities, private network, telemetry

Receives from 03 Gateway

Enforcement points, per-agent token metrics

Hands to 05 Managed Operations

Catalogue, reviews, containment runbooks

PROPOSED SCOPE

We configure and integrate; Security owns the policy

Included: CIS Infra delivers

- Agent 365 and Foundry setup to Security design
- Entra agent identity plumbing
- Usage evidence and reconciliation
- Runbooks and review drills

Optional: priced separately

- Stop-path pilot, then containment build
- More runtimes or clouds
- Gateway enforcement (03)
- Operation (offering 05)
- Licence advisory (offering 04)

Other owners

- AI: runtime limits, evaluations
- Security: policy, authority
- Power Platform: Copilot Studio admin
- DevOps: deployment registration
- Customer: restart approval

Limit: Agents outside supported platforms and licences stay invisible until registered and instrumented.

PROPOSED REFERENCE ARCHITECTURE

cognizant

Microsoft control plane first; we build only the gaps

LAYER 3: CIS INFRA CUSTOM GAP LAYER

- **Reconciliation** — joins inventory to usage
- **Usage catalogue** — status, owner, risk
- **Workbook views** — reviews and queues
- **Containment orchestrator** — block, cancel, deny, verify

LAYER 2: RUNTIME EVIDENCE (NATIVE SERVICES)

- **Application Insights** — runs, traces, tokens
- **Log Analytics** — gateway and platform logs
- **Resource Graph** — hosting resources, tags
- **Deployment pipelines** — agent ID, version, owner

LAYER 1: MICROSOFT CONTROL PLANE (CONFIGURE FIRST)

- **Agent 365** — registry and policy
- **Foundry Control Plane** — Foundry agents
- **Entra agent identity** — Conditional Access
- **Defender and Purview** — threats, data security

Runtimes covered: Copilot Studio · Foundry agents · Container Apps or AKS hosts · Logic Apps · AWS and Google via registry sync (preview)

Proposed reference architecture · CIS Infra custom design · Agent 365 shown as a concept box (Microsoft 365 product, no Azure icon)

CHECKED 11 OCT 2026

Microsoft covers the registry; we add evidence and a stop

Configure: Microsoft provides

- Agent registry across Microsoft, Copilot Studio, Foundry and partner agents
- Foundry runs, errors and token use per agent
- Agent identities and sign-in blocking (Entra)
- Threat alerts and data-security posture

Build: CIS Infra adds only where needed

- Usage evidence joined to deployment records, all runtimes
- Dormant and orphaned agent reviews with owners
- Cross-layer stop: block, cancel, deny, verify
- Coverage where licences or runtimes fall short

Decision: Licence prerequisite: Agent 365 ($15 per user per month, or in Microsoft 365 E7). Checked in the assessment, not assumed.

ESTIMATE, NOT APPROVED

cognizant

Assess in 3 to 4 weeks; pilot the stop after our PoC

Package	Effort (role days)	Elapsed time	Indicative fee band*
Coverage assessment	15 to 25	3 to 4 weeks	$15k to $25k
Configure control plane and evidence	30 to 60	6 to 10 weeks	$30k to $60k
Custom gap layer	30 to 60	6 to 10 weeks	$30k to $60k
Stop-path pilot (after our PoC)	15 to 30	3 to 4 weeks	$15k to $30k
Containment build after PoC	40 to 80	8 to 12 weeks	$40k to $80k

What moves an engagement to the high end: several runtimes or clouds, no Agent 365 licence, poor telemetry, many tool integrations.

Note: *Fee band = role days x illustrative $1,000 per day. Not a Cognizant rate or quote. Azure and licence spend are separate.

Unproven stops and missing licences are the main risks

Agents outside coverage

Effect: Catalogue looks complete but is not

Handle: Coverage report with stated denominator

Owner: CIS Infra with DevOps

Licence not in place

Effect: Native features unavailable

Handle: Licence check in assessment; custom fallback priced

Owner: Customer, advised by offering 04

Stop path unproven

Effect: Agent keeps acting after a block

Handle: Proof of concept before selling containment

Owner: CIS Infra, AI, Security

Containment authority unclear

Effect: Slow or contested stop

Handle: Named authority and restart approver

Owner: Customer risk owner

Security threat model and regulatory notes: appendix SEC1 and SEC2.

TARGETS AFTER PILOT

Measure coverage and stop time; fund the PoC today

Success measures

Coverage agents reconciled; gaps listed by reason

Ownership agents with a valid business and technical owner

Classification test agents classified in every state

Containment (after PoC) block, cancel, deny, identity drills

Stop time measured worst case per runtime

Decide today

- Configure-before-build rule
- Fund the kill-switch proof of concept
- Containment and restart authority

Decide after evidence or approval

- Stop-time targets (after PoC)
- Sell rates (Finance)
- AI tower commitment

90-day ask: budget and sponsor are inputs (deck 00 slide 10). Stop at day 45 if the PoC fails a K4 test.

APPENDIX

Technical and commercial appendix

Catalogue design, coverage, classification, kill-switch architecture, runtime controls, audit evidence, ISO/IEC 42001 readiness, delivery bench, account play, RACI, cost layers and sources.

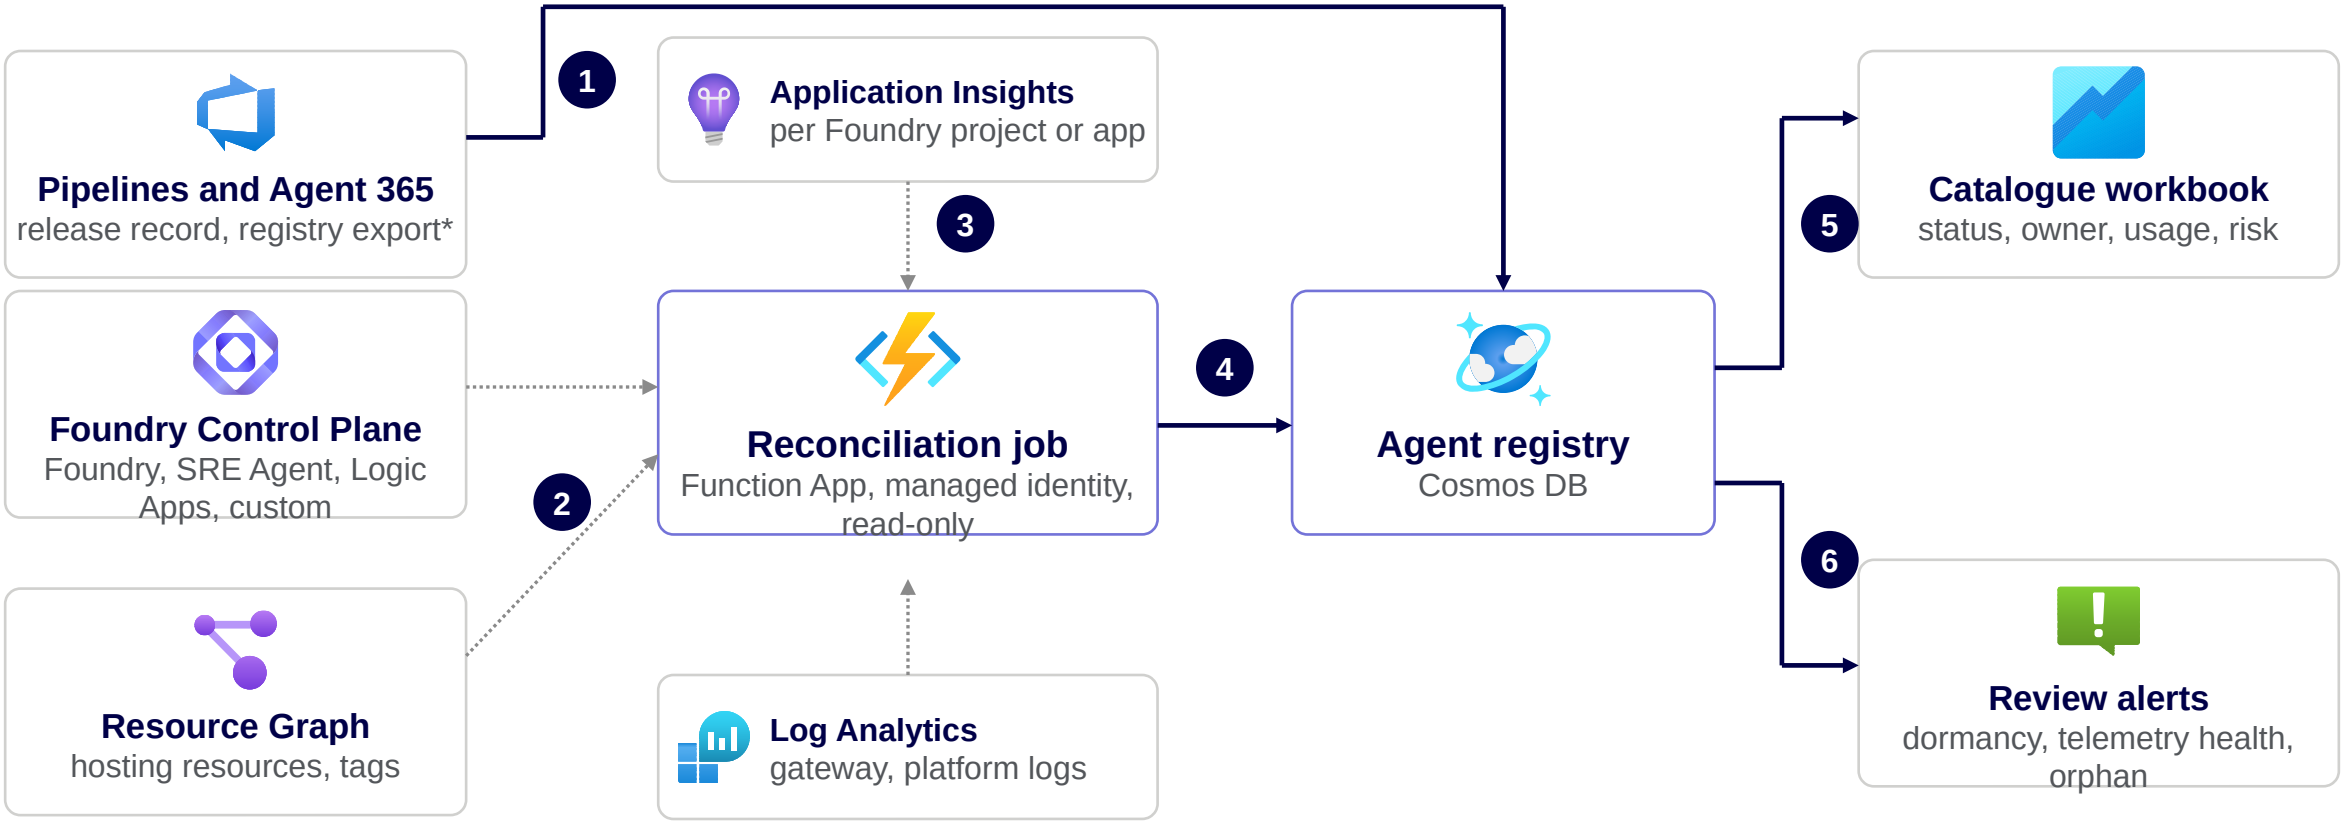

Appendix index

13 **A0** Usage states: no telemetry is not no usage
14 **A1** Catalogue architecture (detailed)
15 **A3** Minimum catalogue record
16 **A5** Usage classification rules
17 **A6** Coverage: native, custom, outside
18 **A7** Illustrative catalogue dashboard
19 **K1** Kill-switch reference architecture
20 **K2** Block, cancel, deny: what each layer does
21 **K3** Containment limits
22 **K4** Containment test scenarios
23 **K5** Kill-switch proof-of-concept plan
24 **K6** Kill-switch authority and liability
25 **A8** Foundry lifecycle actions by agent type
26 **A9** Runtime limits and approvals
27 **A10** Agentic retrieval loop (adapted)
28 **A11** Multi-agent workload (adapted)
29 **A12** Operations, quality and economics signals
30 **A13** Containment runbook
31 **A14** Delivery gates and acceptance
32 **A15** Dormant review and retirement
33 **A16** Build versus buy detail
34 **A17** Licence prerequisites
35 **A18** Copilot Studio governance roles
36 **FP1** Fixed-price risk controls
37 **AU1** Audit-ready control matrix and evidence pack
38 **ISO1** ISO/IEC 42001 readiness add-on
39 **Q1** Qualification scorecard and account shortlist
40 **E1** Estimate assumptions
41 **SEC1** AI threat model and controls
42 **SEC2** Regulation and EU AI Act roles
43 **G1** Glossary

45 **AC1** Account play and contract risk
46 **C1** Cost layers and pricing formula
47 **R1** RACI matrix
48 **R3** Delivery and commercial readiness
49 **D1** Decision and approval register
50 **S1** Sources and verification dates
51 **S1b** Sources and verification dates (continued)

No telemetry is not proof of no usage

Active	Qualifying runs in the last 30 days	**Action:** Monitor outcomes
Never observed	Deployed; no run recorded since onboarding	**Action:** Validate onboarding
Dormant candidate	No runs for 30 days; telemetry healthy	**Action:** Owner review
Telemetry unknown	Telemetry missing, stale or unhealthy	**Action:** Repair monitoring
Orphaned	No valid owner, or resource without record	**Action:** Assign or retire
Blocked or retired	Recorded lifecycle decision	**Action:** Verify residual resources

Custom gap layer: detailed reference architecture

Request / data flow Telemetry or state read

Purple outline = custom build. Others are native Azure capabilities.

Proposed reference architecture · CIS Infra custom design · not a Microsoft-published or Microsoft-endorsed architecture

Minimum catalogue record for each agent

Identity	Accountability	Exposure	Activity	Control
• Agent ID and version • Environment and hosting platform • Deployment location and endpoint	• Business owner • Technical owner and responder • Review date	• Identity and permissions • Models, tools and data dependencies • Risk classification	• Last observed run • Usage, error and cost indicators • Telemetry health	• Containment mechanism per layer • Lifecycle status • State version (quarantine)

Decision: A record with no owner or no containment mechanism is a finding, not a pass.

Usage classification rules

State	Rule (proposed)	Evidence used	Action and owner
Active	At least one qualifying production run in 30 days	App Insights or Control Plane runs	Monitor; agent owner
Never observed	Deployed, no run since onboarding	Pipeline record, no runs	Validate onboarding; technical owner
Dormant candidate	No runs for 30 days and telemetry healthy	Telemetry heartbeat present	Owner review in 14 days; business owner
Telemetry unknown	Missing, stale or unhealthy telemetry	No heartbeat; config drift	Repair monitoring; CIS Infra
Orphaned	Owner invalid, or resource without record	Directory lookup; Resource Graph	Assign or retire; service owner
Blocked	Containment or policy decision recorded	Registry state version	Verify enforcement; Security
Retired	Lifecycle decision; resources removed	Resource Graph shows none left	Verify residual resources; CIS Infra

VERIFIED 11 OCT 2026

Inventory coverage by agent type

Agent type	Inventory	Usage telemetry	Containment
Foundry prompt, workflow, hosted	Native	Native once configured	Stop when published; custom for in-flight
Azure SRE Agent	Native	Native runs count	Start or stop
Logic Apps agent loops	Native	No traces or metrics	Stop resource: all workflows
Custom agents on Container Apps or AKS	Register manually	Custom instrumentation	Block proxy; custom adapter
Classic agents, Azure OpenAI assistants	Not supported	Custom only	Custom only
Copilot Studio agents	Agent 365	Agent 365 and Purview	Entra controls; custom
AWS Bedrock, Google agents	Agent 365 sync (preview)	Custom only	Custom only
Unregistered SaaS or local agents	Outside coverage	Outside coverage	Outside coverage

Limit: Outside coverage means invisible until onboarded. Report coverage percentage with the denominator stated.

ILLUSTRATIVE, NO CUSTOMER DATA

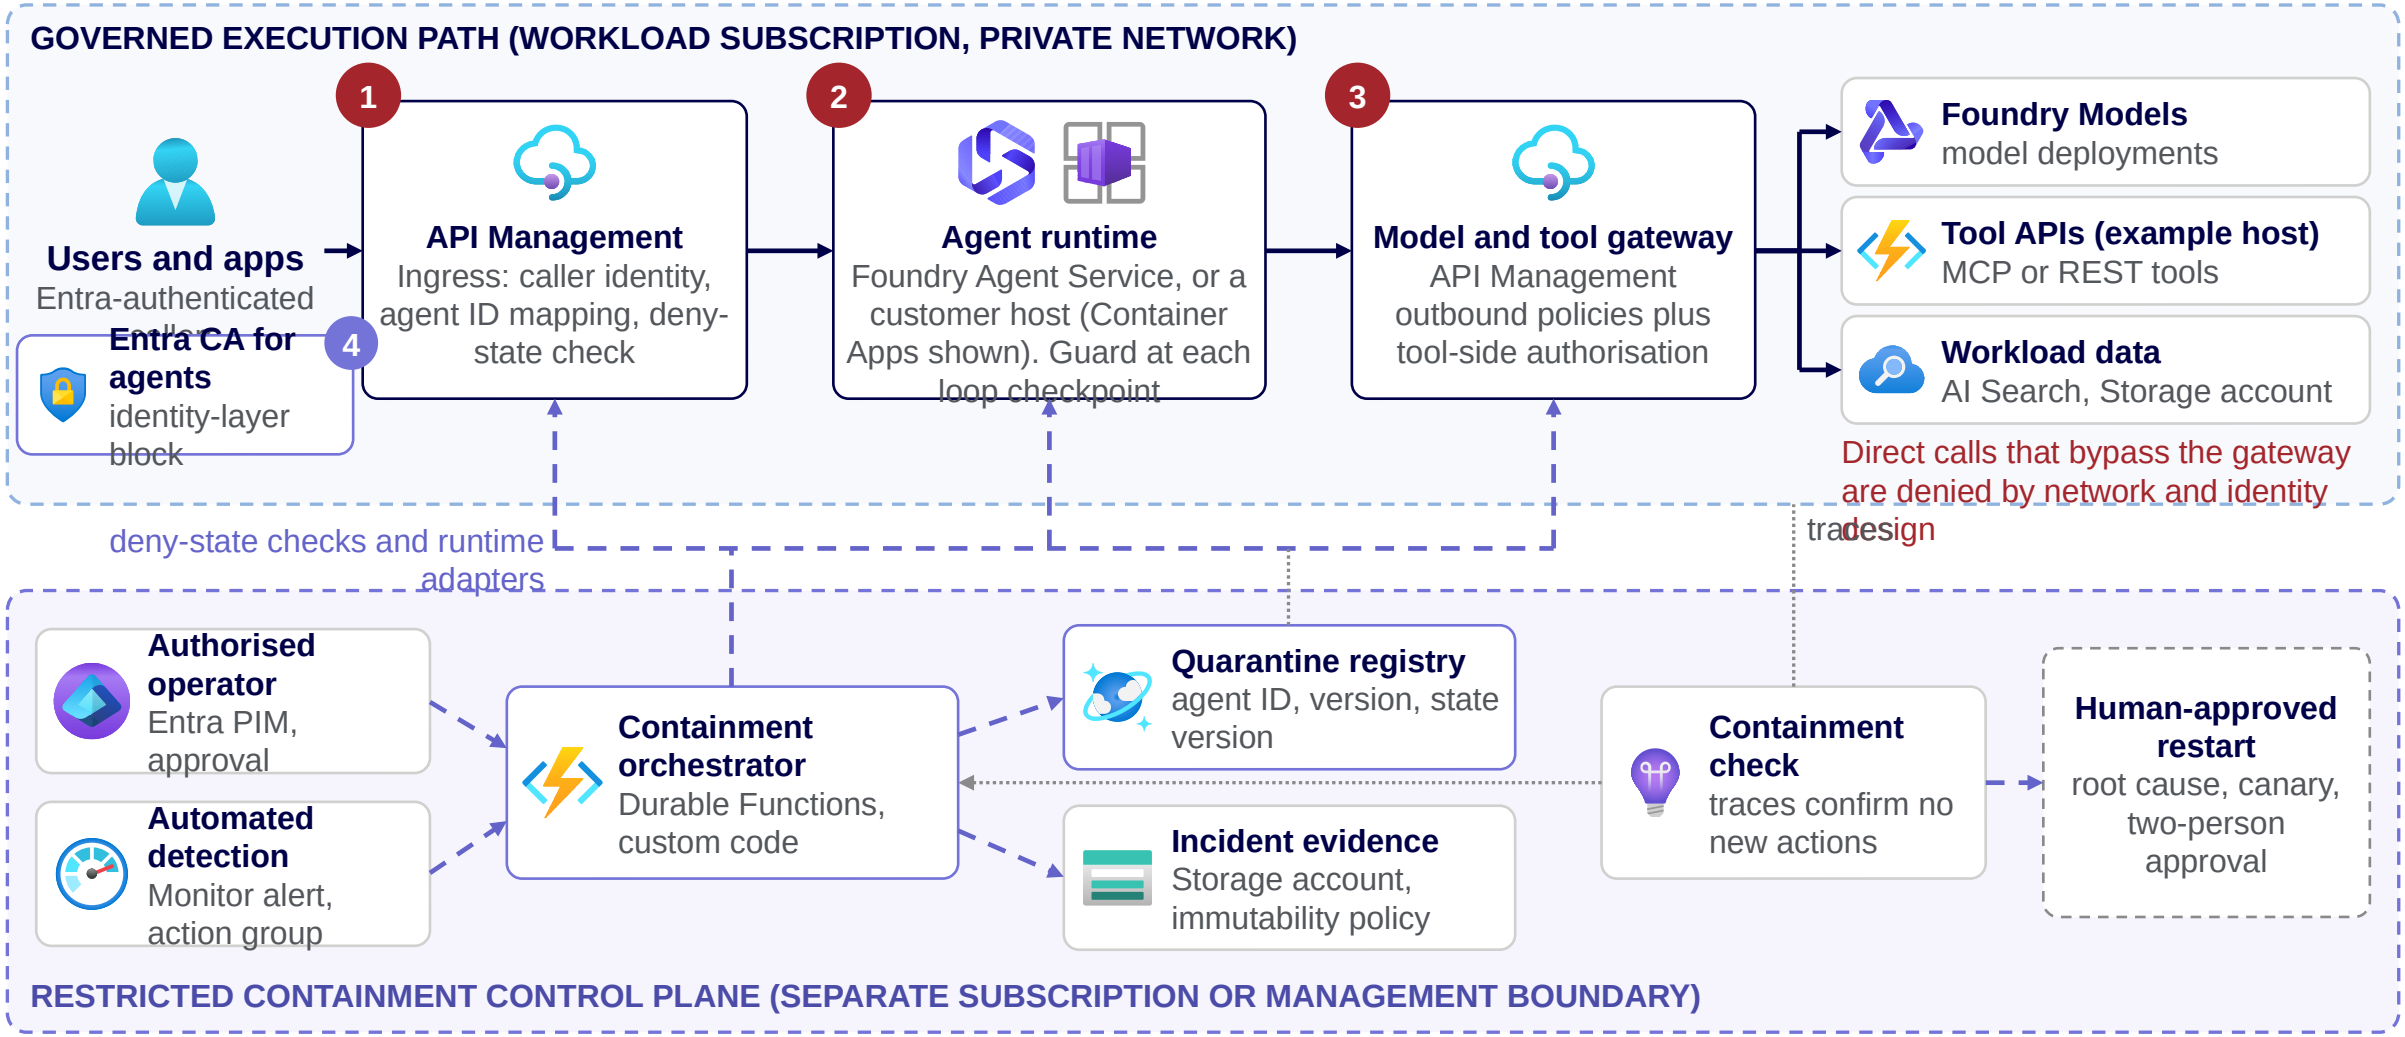

Agent estate view: what the workbook shows

ILLUSTRATIVE MOCK-UP · invented sample data · not customer evidence

24	17	4	3	1
Registered	Active, 30 days	Dormant review	Telemetry unknown	Orphaned

Agent (sample)	Owner	State	Last run	Containment
Knowledge assistant	Workplace	**Active**	Today	Block, cancel, deny tested
Invoice triage	Finance	**Dormant review**	42 days	Block tested
Ops helper	Platform	**Telemetry unknown**	Unknown	Not tested
Legacy summariser	None	**Orphaned**	96 days	None recorded

Rogue-agent containment on Azure

Three containment actions, three different mechanisms

1 Block new requests

What it does

API Management ingress rejects calls for the quarantined agent ID and version. Foundry Stop (published agents) or Block (custom agents) adds a platform-level control.

Limit

Does not touch runs already executing. A caller holding a direct endpoint or key bypasses it.

2 Cancel or isolate running work

What it does

Runtime adapter cancels supported runs, disables triggers and queue consumers, or isolates dedicated compute (Container Apps or AKS) where authorised.

Limit

Cancellation support differs by runtime. Managed Foundry runtimes may not allow process termination. Shared hosts widen the blast radius.

3 Deny further model and tool actions

What it does

Outbound gateway and tool-side authorisation reject model, tool and data calls for the quarantined scope, checked before irreversible actions.

Limit

Cannot undo side effects already completed. Token and RBAC revocation can lag; use resource-side denial as well.

Limit: No universal instant stop. Worst-case stop time is measured in drills, not assumed.

Known limits of agent containment on Azure

Limit	Why it matters	Design response
Gateway block does not stop an existing run	Foundry Stop "doesn't terminate existing runs" (Microsoft Learn)	Runtime checkpoint guard plus outbound denial
Token or RBAC revocation is not immediate	Cached tokens stay valid until expiry or propagation	Resource-side deny check; short token lifetimes
Runtime cancellation support varies	Foundry, Container Apps, AKS and Logic Apps differ	Runtime-specific adapters, tested per platform
Direct endpoint access bypasses a proxy	Agents holding keys or public endpoints skip API Management	Private endpoints, disable local auth, no shared keys
Circuit breaker is not a kill switch	It protects a backend dependency, not the agent scope	Separate quarantine state keyed by agent ID
Distributed state and caches delay enforcement	Replication and cache TTL set worst-case stop time	Bounded freshness contract; no caching of allow on high-impact tools
Fail-closed reduces availability	Unknown state blocks legitimate work	Agree fail-closed scope per risk class with the business owner
Identity block depends on licence and propagation	Entra CA for agents needs Agent 365 or E7 licensing; blocks apply at token issue, not to live sessions	Use as layer 4, never the only stop

Containment test scenarios before production

Scenario	Test	Pass evidence
Bypass	Call model and tool endpoints directly with the agent identity	Calls denied at network and resource level
Retries	Client retries and APIM retry policy after quarantine	No retried call reaches a backend
Queued work	Messages already queued for the agent when quarantined	Consumers disabled; messages held, not processed
Long-running run	Run in progress during quarantine	Next checkpoint halts; no new tool call recorded
Missing telemetry	Disable traces, then trigger containment	Manual path works; telemetry gap raised as incident
Partial failure	One enforcement point unavailable	Fail-closed where agreed; failure recorded in evidence
Control-plane outage	Orchestrator or registry unavailable	Documented break-glass path executes
Restart	Approved release after root cause	Two-person approval, canary, state version advanced

Kill-switch proof of concept: prove it, then sell it

1 Set up
Two runtimes, synthetic agents, test tool, gateway policies

→

2 Instrument
Timestamps at alert, state write, each enforcement point

→

3 Exercise
All K4 scenarios, three runs each

→

4 Measure
Worst-case stop time per runtime and layer

→

5 Report
Evidence pack; targets proposed from data

Item	Estimate
Effort	25 to 45 role days (CIS Infra, AI, Security)
Elapsed	4 to 6 weeks
Exit evidence	Measured stop time per runtime; all K4 tests recorded

PROPOSED, LEGAL TO CONFIRM

Who may stop an agent, who may restart it, and liability

Question	Proposed answer	Owner
Who may order a stop?	Named customer risk owner or delegated Security on-call; listed in the runbook	Customer risk owner
Who executes it?	CIS Infra on platform layers; AI tower and tool owners on their layers	Integrated service owner
Who may restart?	Two-person approval: customer business owner plus Security	Customer business owner
If a stop fails or is late	Escalate to break-glass path; record as incident; no penalty beyond agreed service levels	Security with CIS Infra
Liability position	Reasonable efforts on a tested runbook; no guarantee of instant stop; standard caps apply	Cognizant Legal
When is it in scope?	Only after the PoC passes and the drills are accepted	Offering owner

VERIFIED 11 OCT 2026

Foundry lifecycle actions differ by agent type

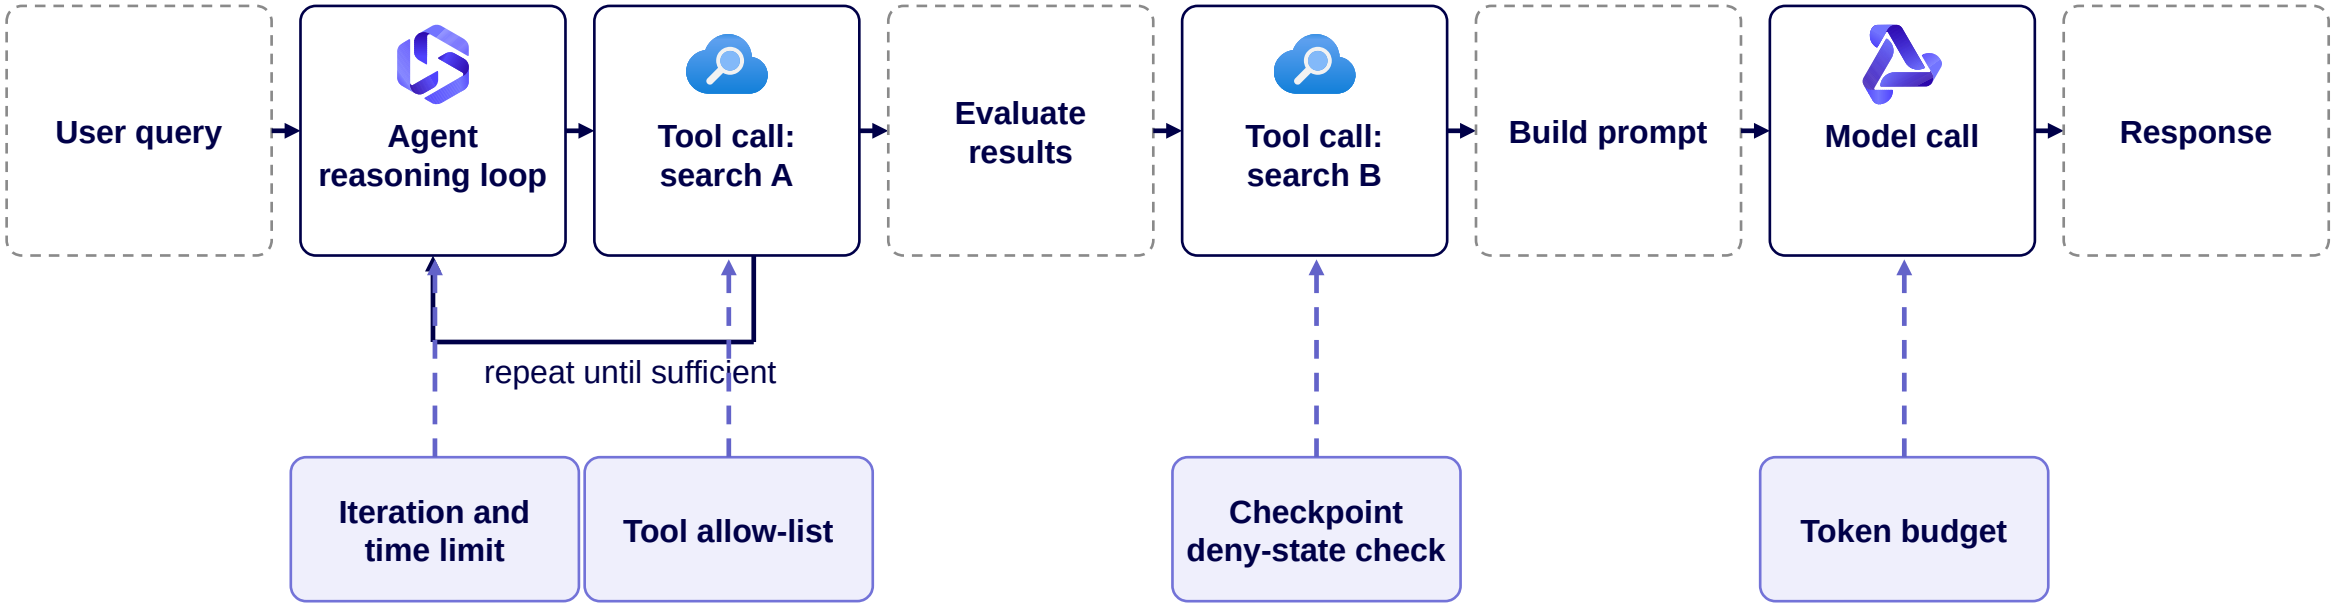

Agent route	Native action	Effect (Microsoft Learn)	Residual risk
Published Foundry agent	Start or stop	Stops deployment, deallocates compute	Existing runs not terminated
Unpublished prompt or workflow	None (delete to stop)	Deletion is the only stop	Needs a designed containment path
Hosted agent (unpublished)	Start or stop	Stops deployment, deallocates compute	Existing runs not terminated
Registered custom agent	Block or unblock	Agent runs but cannot take requests	Host and direct endpoints remain
Logic Apps agent loop	Stop resource	Stops all workflows in the resource	Collateral impact; no traces

Bound the work before a runaway needs detecting

Execution	Maximum runtime, iterations, tokens and concurrent runs per agent version
Tools	Allow-list, scoped identity, transaction limits, idempotency keys
Approval	Human approval before high-impact or irreversible actions

Note: Limits reduce blast radius; they do not replace containment. Owner: AI tower, with Security.

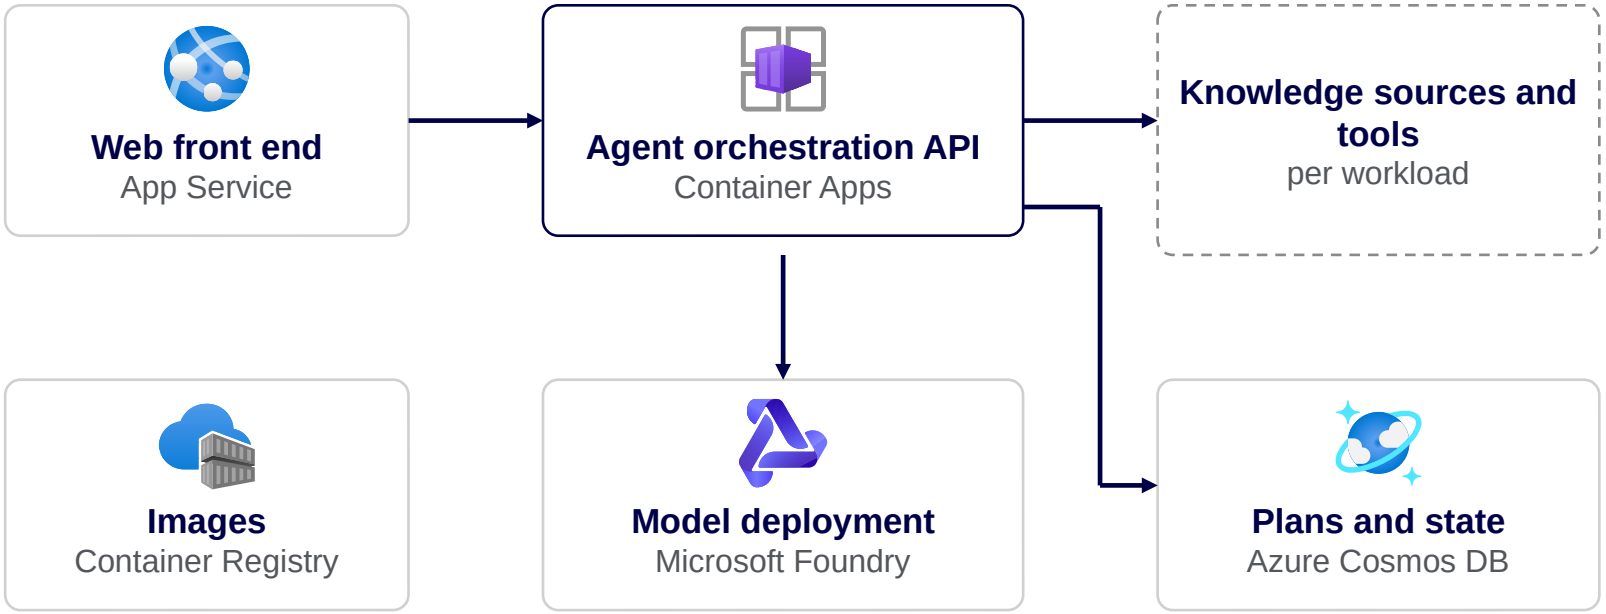

Where an agentic loop amplifies calls

Each loop multiplies model and tool calls. One user question can drive many backend calls, so budgets and stop checks belong at every checkpoint.

Adapted from Microsoft source; control points are proposed additions

Multi-agent workload: owners and stop points

Component	Owner	Stop action
Front end	AI / app team	Block at ingress
Orchestration API	AI	Scale to zero or isolate
Tools	Tool owners	Deny at tool side
Model	AI	Deny at gateway
State	AI with Data	Freeze writes

Adapted from Microsoft source; owners and stop actions are proposed

Monitor behaviour as well as technical success

Operations

- Errors and latency
- Tool failures
- Telemetry health

Owner: CIS Infra

Quality

- Task outcome
- Evaluation scores
- Escalation rate

Owner: AI tower

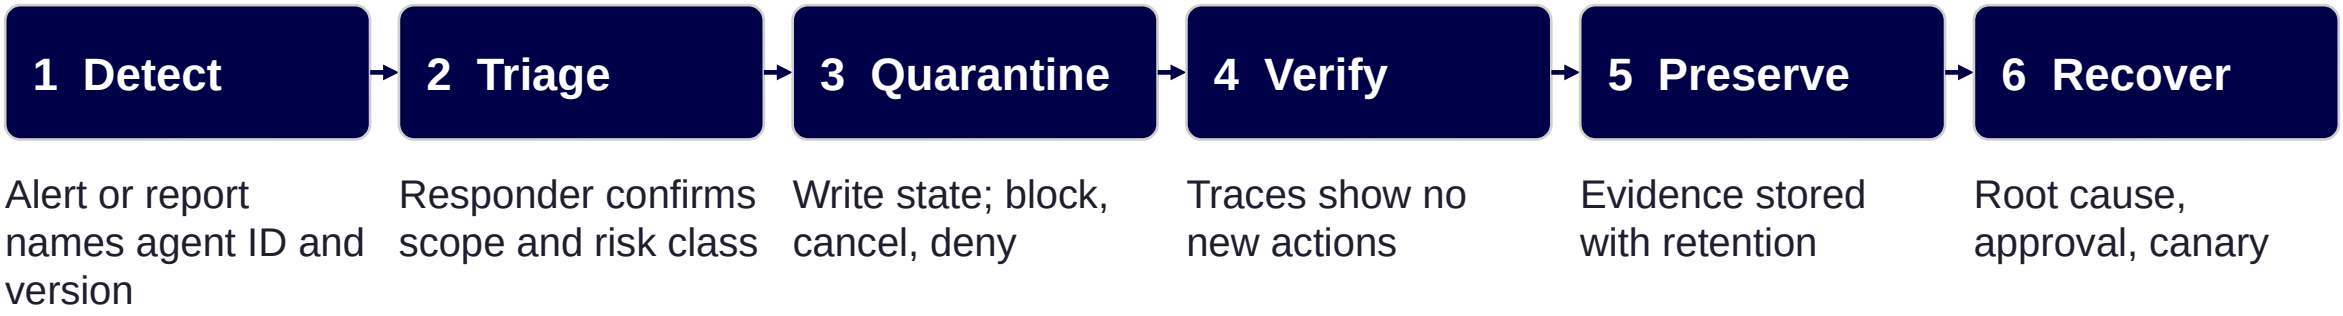

Economics

- Tokens per task
- Cost per useful task
- Retry and loop amplification

Owner: CIS Infra with AI

Limit: Quality scoring needs approved test data and evaluators. It is not automatic proof of safety.

Containment runbook sequence

Partial failure	Required behaviour
Proxy blocked, direct endpoint open	Bypass denied by network and identity
Worker continues after stop	Checkpoint guard and tool denial
Token revocation delayed	Resource-side denial
Monitoring unavailable	Manual containment path
Restart triggers retries	Idempotency and queue handling

Delivery gates and acceptance evidence

Gate	Pass evidence	Approver
Coverage	All in-scope agents reconciled; gaps listed by reason	Customer platform owner
Usage	Test agents correctly classified in every state	Customer service owner
Containment	New, in-flight and tool paths each tested separately	Customer security owner
Recovery	Controlled restart with two-person approval and evidence	Customer business owner
Operations	Runbooks, alert routing and review queues accepted	Integrated service owner

PROPOSED PROCESS

Dormant-agent review and retirement

Flag
Dormant candidate or orphaned state

→

Notify
Owner asked to confirm need

→

Decide
Keep with reason, or retire

→

Retire
Remove identity, secrets, endpoints, compute

→

Confirm
Resource Graph shows nothing left

Decision: No automatic deletion. Seasonal and standby agents keep an exception with a review date.

Build versus buy, capability by capability

Capability	Native option	Decision rule	Build if
Agent registry	Agent 365; Foundry Control Plane	Configure	No licence, or runtime not covered
Usage evidence	Foundry runs (last month); App Insights	Configure plus join	Need cross-runtime join to deployment records
Ownership and reviews	Agent 365 sponsor; Entra lifecycle (preview)	Configure	Review queues across runtimes
Identity block	Entra Conditional Access for agents	Configure	Never build
Threat detection	Defender AI threat protection	Configure (Security)	Never build
Cross-layer stop and verify	None claims this end to end	Build after PoC	Always, if containment is in scope

CHECKED 11 OCT 2026

Licence prerequisites to check in the assessment

Item	What to check	Source status
Agent 365	$15 per user per month, or included in Microsoft 365 E7	Microsoft blog (verified)
Microsoft 365 E7	Includes Agent 365 and Entra Suite; about $99 per user per month	Microsoft Learn; price third party
Entra agent controls	E7, or Agent 365 plus Entra P1 or Microsoft 365 E3	Microsoft Learn (verified)
Copilot Studio usage	$0.01 per credit, or $200 per 25,000-credit pack a month	Microsoft licensing guide (verified)

Copilot Studio agents: who does what

Activity	Power Platform team	CIS Infra	Security	AI tower
Environments and data policies	Accountable	Informed	Consulted	Informed
Agent inventory in Agent 365	Consulted	Accountable	Consulted	Informed
Custom connectors to Azure APIs	Responsible	Accountable (via APIM)	Consulted	Consulted
Data security posture (Purview)	Informed	Informed	Accountable	Informed
Containment of a Copilot Studio agent	Responsible	Responsible	Accountable	Consulted

Fixed price only after an assessment, with change triggers

1 Assess first
Short paid assessment before any fixed price

2 Name the triggers
Change triggers written into the SOW

3 Hold contingency
Amount set by Finance (input required)

4 Accept by gates
Evidence-based acceptance at each gate

Change trigger for this offering	Why it changes effort
More runtimes or clouds	New adapters and evidence sources
No Agent 365 licence	Custom catalogue carries more of the work
Poor telemetry	Instrumentation before classification
Containment scope added before the PoC	Not allowed: PoC first

PROPOSED DELIVERABLE

Audit-ready evidence: what internal audit can test

Control objective	Test	Evidence source
Every in-scope agent is registered	Compare registry with deployment records	Agent 365 registry, Resource Graph
Every agent has a business and technical owner	Sample agents; check owners are current	Catalogue record, Entra
Dormant agents are reviewed	Check review queue closure within the agreed period	Workbook review queue
Containment works as designed	Re-run drill evidence for a sampled agent	K4 drill evidence pack
Agent access is least privilege	Review roles and Conditional Access policies	Entra, PIM reports

Note: Deliverable: control matrix plus evidence pack, refreshed monthly in managed operations. Not an assurance opinion.

ESTIMATE, NOT APPROVED

ISO/IEC 42001 readiness: an optional add-on

Item	Proposal
Scope	Gap review of AI platform and agent operations evidence against ISO/IEC 42001
Effort (estimate)	15 to 30 role days over 3 to 5 weeks ($15k to $30k illustrative)
Customer dependency	AI management system owner, scope statement, risk assessment method
Output	Gap list, evidence map, remediation plan
Not included	Certification (accredited bodies only); legal advice

PROPOSED TOOL

Qualification scorecard and account shortlist template

Criterion (score 0, 1 or 2)	Evidence
Funded workload	Named owner, budget route, decision date
Platform authority	Who can approve tenant and network changes
Executive sponsor	Named and engaged
Data access	Source owner and rights confirmed
Region and capacity	Model, deployment type and quota checked
Data residency gate	UK or Middle East in-country need checked (deck 01)
Regulated bank	Model risk and DORA position known
Agent estate size	Count and runtimes, even rough
Licence position	Agent 365 or E7 owned or planned

Account shortlist (template, empty)

Account	Sponsor	Workload	Blocker	Score	Next action

Decision: Quote implementation at 14+ with no zero on funding, authority, sponsor or residency. Otherwise sell the assessment.

ESTIMATE, NOT APPROVED

How the effort and duration ranges were built

Package	Low case assumes	High case assumes
Coverage assessment	Two runtimes, licence in place	Four or more runtimes, no licence, poor telemetry
Configure control plane	Agent 365 already licensed; one tenant	Several tenants; Entra controls new to customer
Custom gap layer	Two runtimes to join	Multi-cloud and many tools
Stop-path pilot	Reuses our PoC on two runtimes	Three runtimes, regulated test environment
Containment build	PoC design carries over	PoC shows gaps needing redesign

Basis and recalibration plan

Basis: bottom-up author estimate. Assessment = workshops, registry and telemetry review, coverage report. Configure = set-up per runtime plus tests. Pilot reuses PoC assets. Recalibrate after every pilot: record actual role days per package, compare with the band, and reset bands each quarter. Owner: integrated service owner with Finance.

AI threat model: what can go wrong, and who controls it

Threat	Example	Control	Owner
Agent sprawl	Unknown agents with live access	Agent 365 registry, coverage report	CIS Infra
Excessive agency	Agent acts beyond its purpose	Tool allow-lists, approvals, runtime limits	AI with Security
Identity misuse	Agent credentials reused or stolen	Entra agent identity, Conditional Access	Security designs, CIS Infra implements
Prompt injection	Instructions hidden in documents or tools	Prompt Shields, tool-side checks	AI with Security
Orphaned agents	No owner after staff leave	Owner reviews, retirement process	Customer service owner
Containment bypass	Direct calls avoid the gateway	Private endpoints, no shared keys, layer 4 identity block	CIS Infra
MCP tool trust boundary	Agent registers or calls an unapproved MCP server	API Center allow-list (03), Agent 365 policies	Security with CIS Infra
Supply chain	Third-party agent with hidden capabilities	Registry review before approval; least-privilege identity	Security

CHECKED 11 OCT 2026

NOT LEGAL ADVICE

Regulation: who holds which duty, and where we help

Party	Likely EU AI Act role (indicative)	What this offering supports
Customer deploying AI systems	Deployer (usually)	Inventory, ownership, human oversight and logging evidence
Customer building its own AI system	Provider	Registration and post-market monitoring inputs
Cognizant CIS Infra	Usually neither: infrastructure service provider	Role stated in the contract; Legal confirms

Area	Checkpoint	Status (checked 11 Oct 2026)
EU AI Act	Annex III high-risk duties from 2 Dec 2027; Annex I from 2 Aug 2028	Third-party summary (Orrick); EUR-Lex not verified
EU DORA	ICT risk and ICT third-party contract terms for financial entities	Applies from 17 Jan 2025 (EUR-Lex)
EU NIS2	Cyber risk management for essential and important entities	National laws; deadline 17 Oct 2024
UK	Regulator-led AI principles; UK GDPR	Not re-verified: confirm current position
UAE	Federal Decree-Law 45 of 2021 (personal data)	Executive regulations: verify status
Saudi Arabia	PDPL (enforceable Sep 2024); NCA cloud controls CCC-1:2020	Third-party summary; verify transfer rules
US banks	Interagency model risk guidance (17 Apr 2026) replaced SR 11-7	Generative and agentic AI out of scope; governance still expected

Glossary of terms used in this deck

Term	Meaning
A2A	Agent-to-agent protocol for agents calling other agents
Agent 365	Microsoft control plane to register, observe and govern agents (per-user licence)
API Center	Azure registry for APIs and MCP servers; decides which tools exist
APIM	Azure API Management; the gateway that controls traffic
Copilot Studio	Microsoft low-code tool to build agents; consumption in Copilot credits
Data Zone	Model processing inside a Microsoft data zone (US, EU or APAC)
DORA	EU Digital Operational Resilience Act for financial entities
FOCUS	FinOps Open Cost and Usage Specification for cost data exports

Term	Meaning
Foundry	Microsoft Foundry: Azure platform for models and agents
FTE	Full-time equivalent person
MCP	Model Context Protocol: standard way for agents to call tools
MRM	Model risk management (banking supervision)
NIS2	EU directive on cybersecurity for essential sectors
PAYG	Pay as you go: pay per token used
PDPL	Personal Data Protection Law (Saudi Arabia, UAE)
PIM	Entra Privileged Identity Management: just-in-time admin access

Term	Meaning
PTU	Provisioned throughput unit: reserved model capacity, billed per hour
RACI	Responsible, Accountable, Consulted, Informed
RFP	Request for proposal
RTO / RPO	Recovery time objective / recovery point objective
SOW	Statement of work
Token	Unit of text a model reads or writes; the main pricing unit
TPM	Tokens per minute

INPUT REQUIRED

Who delivers it, and what sellers need before day one

Role	Skills needed	Certification (verify current)	Ramp-up (estimate)	Bench now
AI platform engineer	Foundry, Agent 365, Entra Agent ID	Azure AI Engineer Associate	3 weeks	Input required: delivery lead
Security engineer	Conditional Access, Defender, Purview	Identity and Access Administrator Associate	2 weeks	Input required: delivery lead
Integration developer	Functions, durable orchestration, APIM policies	Azure Developer Associate	2 weeks	Input required: delivery lead
Service designer	Runbooks, drills, review queues	None required	1 week	Input required: delivery lead

Presales kit item	Status	Owner
Executive deck, talk tracks, customer pitch	Exists (v4.0 draft)	Offering owner
Demo environment	To build	CIS Infra lab owner (input required)
SOW template and estimator	To build	Presales lead with Finance
RFP answer bank	Draft exists (register)	Presales lead
Case study	After first pilot	Account team
Kill-switch PoC evidence pack	After the PoC	Offering owner 02

How account teams use it, and the contract risks to manage

Fits in the account plan

Security, risk or audit programme with growing agent counts.

First deal (illustrative)

Assess $15k to $25k; stop-path pilot $15k to $30k after our PoC.

Expansion path

Containment build after the PoC, then managed operations (05).

Business-led entry

Chief risk officer: every agent has an owner, and the stop path is proven before it is relied on.

Contract topic	Proposed position	Owner
Liability cap	Per Cognizant standard terms; no uncapped liability for agent behaviour or customer data	Legal
Service-level penalties	Only on response targets inside coverage hours; none on Azure availability	Legal with delivery
IP of accelerators and code	Cognizant keeps reusable accelerators; customer owns its configuration and code	Legal
Change control	New scope, regions or runtimes priced by change request	Delivery with Finance
Containment liability	Reasonable efforts on a tested runbook; no instant-stop guarantee (K6)	Legal

Microsoft motion: engage the Security and AI specialists (Security; Cloud and AI Platforms); drives Agent 365, Defender, Purview and Foundry use.

NO APPROVED QUOTE

Six cost layers are priced and owned separately

Layer	Applies to this offering	Pricing formula or unit	Missing input (owner)
1 CIS Infra services	Assessment, catalogue build, containment plumbing	Fixed fee; role days x approved sell rate	Sell rates (Finance)
2 Specialist towers	AI runtime limits; Security policy; DevOps registration	Tower role days x tower rate	Tower estimates (tower leads)
3 Recurring managed service	Catalogue operation and drills (offering 05)	Base + agents x rate + coverage	Service rates (Finance)
4 Azure platform consumption	Functions, Cosmos DB, Log Analytics, App Insights	Meters x quantity; log GB is the main driver	Volumes (CIS Infra); prices (customer)
5 Model consumption	Not changed by this offering	n/a	n/a
6 GPU hosting	Not applicable	n/a	n/a

Revenue recognition (Finance owns): Milestones per gate; the customer stop-path pilot is a separate fixed fee. Owner: Finance.

Limit: Layers 4 to 6 are customer Azure spend unless a resale agreement says otherwise. They are not CIS Infra services revenue.

PROPOSED, VALIDATE WITH TOWERS

Delivery RACI: one accountable role per activity

Activity (proposed, validate with towers)	CIS Infra	Secu-rity	Dev-Ops	AI	Data	Data Eng.	Integr. service owner	Cust. work-load owner	Comm. / fin.
Agent 365, Entra CA, Purview and Defender policy	R	A	I	C	I	I	I	C	I
Catalogue and registry design	A/R	C	C	C	C	I	C	C	I
Reconciliation and workbook build	A/R	I	C	C	I	I	I	I	I
Deployment registration in pipelines	C	I	A/R	C	I	I	I	I	I
Agent instrumentation (traces)	R	I	C	A/R	I	I	I	I	I
Risk classes and containment authority	C	R	I	C	I	I	C	A	I
Containment control plane build	A/R	C	R	R	I	I	C	I	I
Runtime limits and tool guards	C	C	C	A/R	I	I	I	C	I
Containment drills (testing)	R	R	C	R	I	I	A	C	I
Service acceptance	R	C	I	R	I	I	R	A	I
Live containment (operations)	R	R	I	R	I	I	A	C	I
Restart and recovery approval	R	C	I	R	I	I	C	A	I
Pricing, attribution and quote	C	C	C	C	I	I	R	I	A

A accountable (one per row) **R** responsible C consulted I informed. **Integrated service owner** = named Cognizant delivery lead for the end-to-end outcome.

Delivery and commercial readiness checklist

Item	This offering
Entry criteria	Named agent cohort, runtimes, containment authority, access to subscriptions and workspaces
Discovery inputs	Agent list (any form), runtimes, identities, tools, telemetry setup, incident process
Deliverables	Registry, reconciliation, workbook, classification rules, containment plane, runbooks, drill records
Scope boundaries	Agreed runtimes and subscriptions; outside-coverage agents listed, not managed
Dependencies	AI instrumentation, DevOps registration, Security policy, offering 01 network design
Delivery phases	Inventory, instrument, control, exercise (estimate per engagement)

Item	This offering
Acceptance criteria	Appendix A14 gates and K4 tests
Customer responsibilities	Owners per agent, authority decisions, approvals for drills and restarts
Pricing units	Fixed assessment; role days per work package; recurring via offering 05
Change-control triggers	New runtime family, subscriptions, agents above cohort, new tool classes
Support handoff	Offering 05 or customer operations; review queues and drills scheduled
Success indicators	Coverage with stated denominator; owners; measured stop time once the pilot runs

Decisions that need an owner and a date

Decision	Decide when	Proposed owner	Evidence needed
Pilot agent cohort and runtimes	Now	AI platform leader	Agent list and runtimes
Containment and restart authority	Now	Customer risk owner	Named roles
Dormancy threshold and exceptions	After pilot	Customer service owner	Usage patterns from pilot
Stop-time targets per runtime	After drills	Integrated service owner	Measured drill timings
Sell rates and attribution	Finance approval	Finance	Costing model
AI tower commitment for runtime limits	Tower agreement	AI tower lead	Effort and owner
