cognizant

CIS INFRA · INTERNAL OFFERING PROPOSAL · FOR SENIOR LEADERSHIP REVIEW

AI Gateway Implementation

Govern model and tool traffic through one controlled, observable path

API Management for traffic, API Center for which tools exist · US, Europe, UK and Middle East pursuits

PROPOSED OFFERING

cognizant

One governed path for every model and tool call

Problem Apps and agents call models and tools directly, often with keys. No shared limits, routing, cost split or tool allow-list.

Offer Build an API Management AI gateway with its policies and private network, plus an API Center registry of approved tools.

Outcome Every governed call is authenticated, metered, attributable and routable; only registered tools are reachable.

Value Share of AI calls governed and attributed; production AI traffic that grows Azure consumption.

Decision requested

- Production on GA API Management tiers; preview tiers only as pilots
- Adopt API Center as the tool and MCP allow-list
- Accept token caps are not exact currency caps

Limit: A gateway cannot govern calls it never receives. Closing bypass routes is part of the scope.

MCP tool sprawl and model churn make a gateway urgent

Tool sprawl via MCP

Agents now call tools through MCP servers. API Center can register them and sync with API Management.

Source: Microsoft Learn, API Center MCP registry

Several model generations

gpt-5.4 is GA and gpt-4.1 retires 14 Apr 2027. Routing must move traffic without app changes.

Source: Foundry retirement schedule

AI threats are real

Defender for Cloud now alerts on jailbreak and data leakage for model traffic.

Source: Defender for Cloud AI threat protection

Who buys

Platform or API owner with the FinOps lead and the CISO delegate; AI platform leader for routing.

What triggers the purchase

Several teams calling models directly; unexplained model spend; keys found in apps; throttling events.

No pipeline or customer demand is claimed. Account shortlist and qualification scorecard: appendix Q1.

PROPOSED PORTFOLIO

03 is the enforcement point for the whole portfolio

Microsoft ecosystem around the portfolio

M365 Copilot

Owned by Cognizant M365 and D365 teams; CIS Infra supplies

HANDOFF

Copilot Studio

Agents covered as a runtime in offerings 02 to 05

COVERED RUNTIME

Agent 365

Microsoft agent control plane; configure before any custom build

CONFIGURE FIRST

API Center

Registry for APIs and MCP tools, beside API Management

CIS INFRA BUILDS

Receives from 01 and 04

Private network and identities; capacity plan for routing

Hands to 02 Agent Governance

Enforcement points, per-agent token metrics

Hands to 05 Managed Operations

Policy register, dashboards, runbooks

PROPOSED SCOPE

We build the gateway and registry; others own policy

Included: CIS Infra delivers

- APIM instance, network, DNS
- Identity and managed identity
- Token, request, concurrency policies
- Routing, retries, circuit breakers
- API Center tool registry

Optional: priced separately

- Multi-region resilience
- Semantic caching (Redis)
- Chargeback reporting
- Copilot Studio connectors
- AI Gateway tier pilot

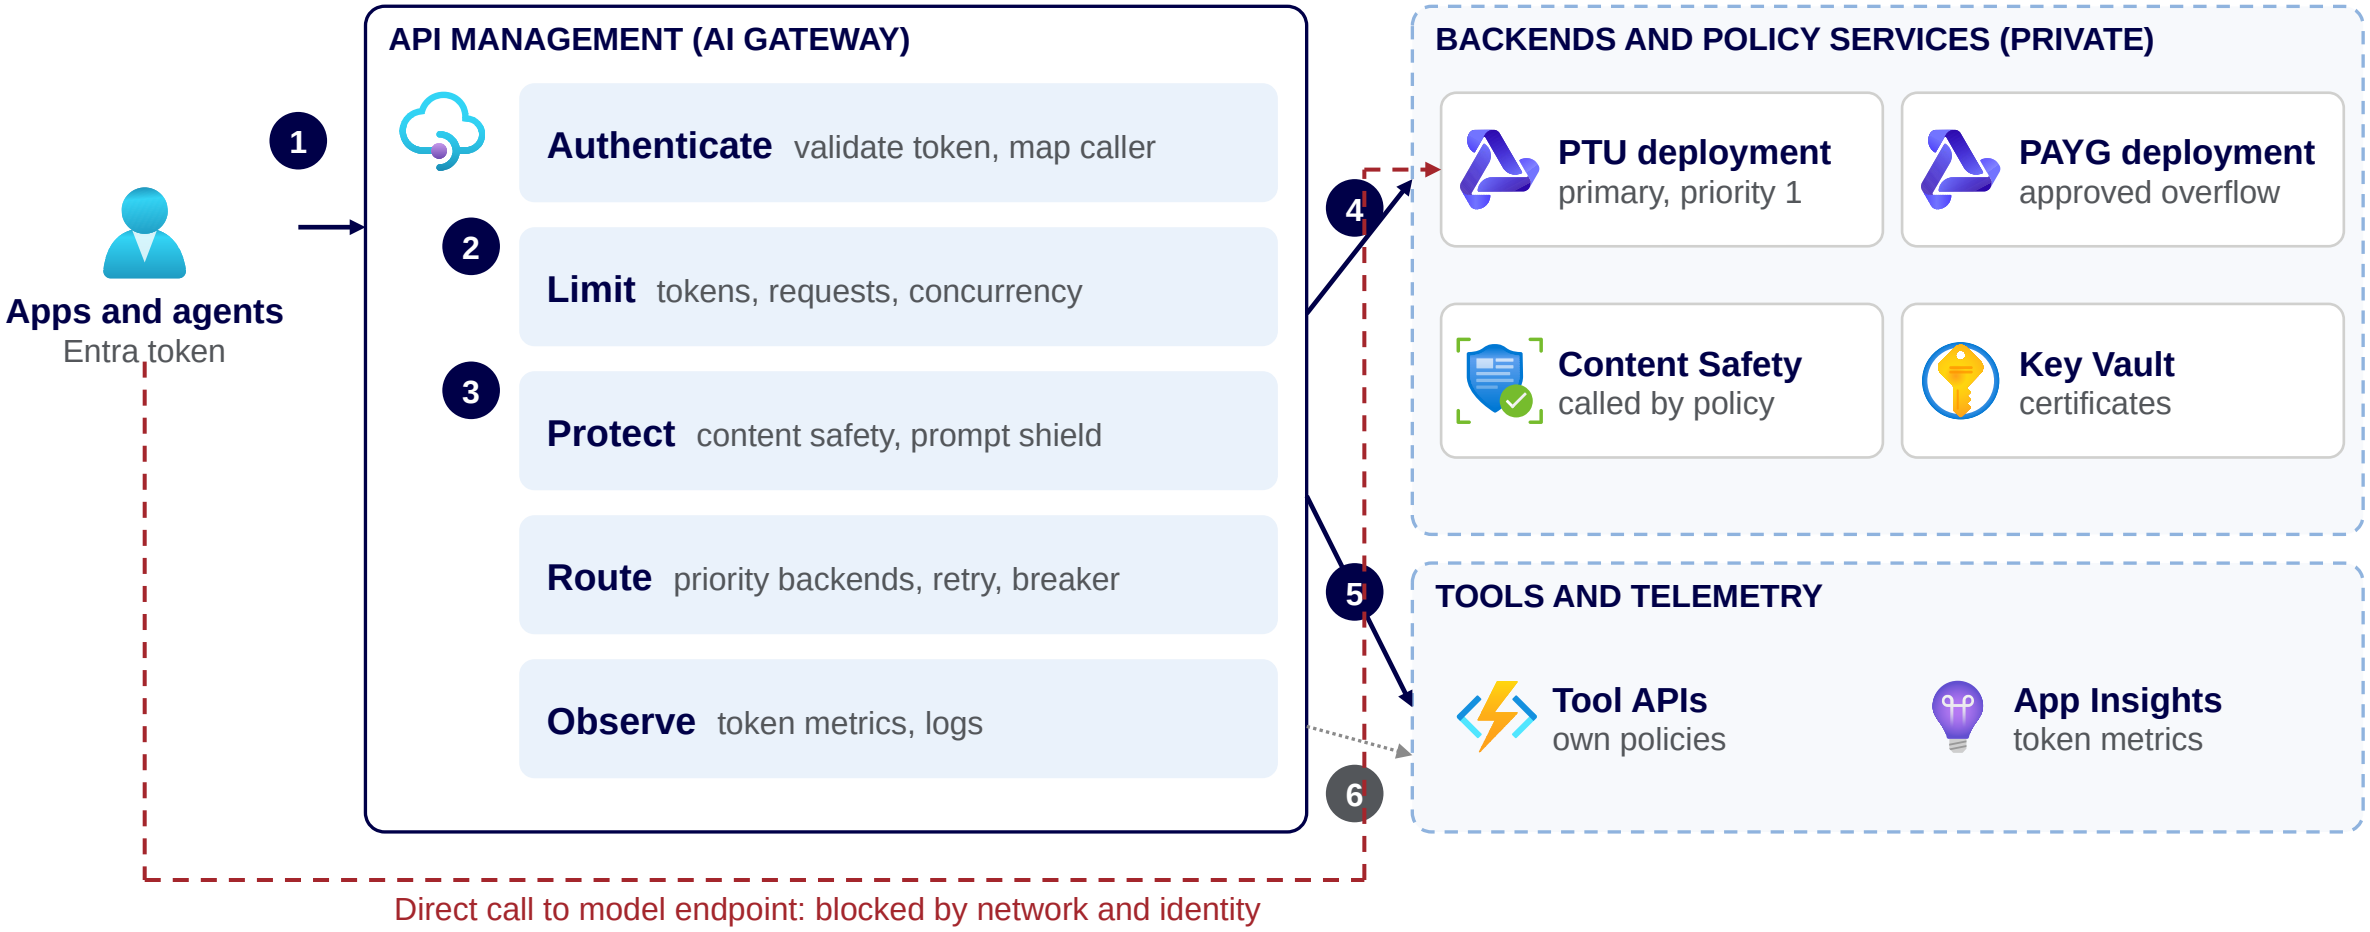

Other owners

- Security: identity, safety policy
- AI: API contracts, routing choice
- DevOps: policy CI/CD
- Finance: allocation rules
- Tool owners: tool authorisation

Limit: CIS Infra does not own model quality, application behaviour or security operations.

PROPOSED REFERENCE ARCHITECTURE

The gateway sits in every call and blocks the bypass

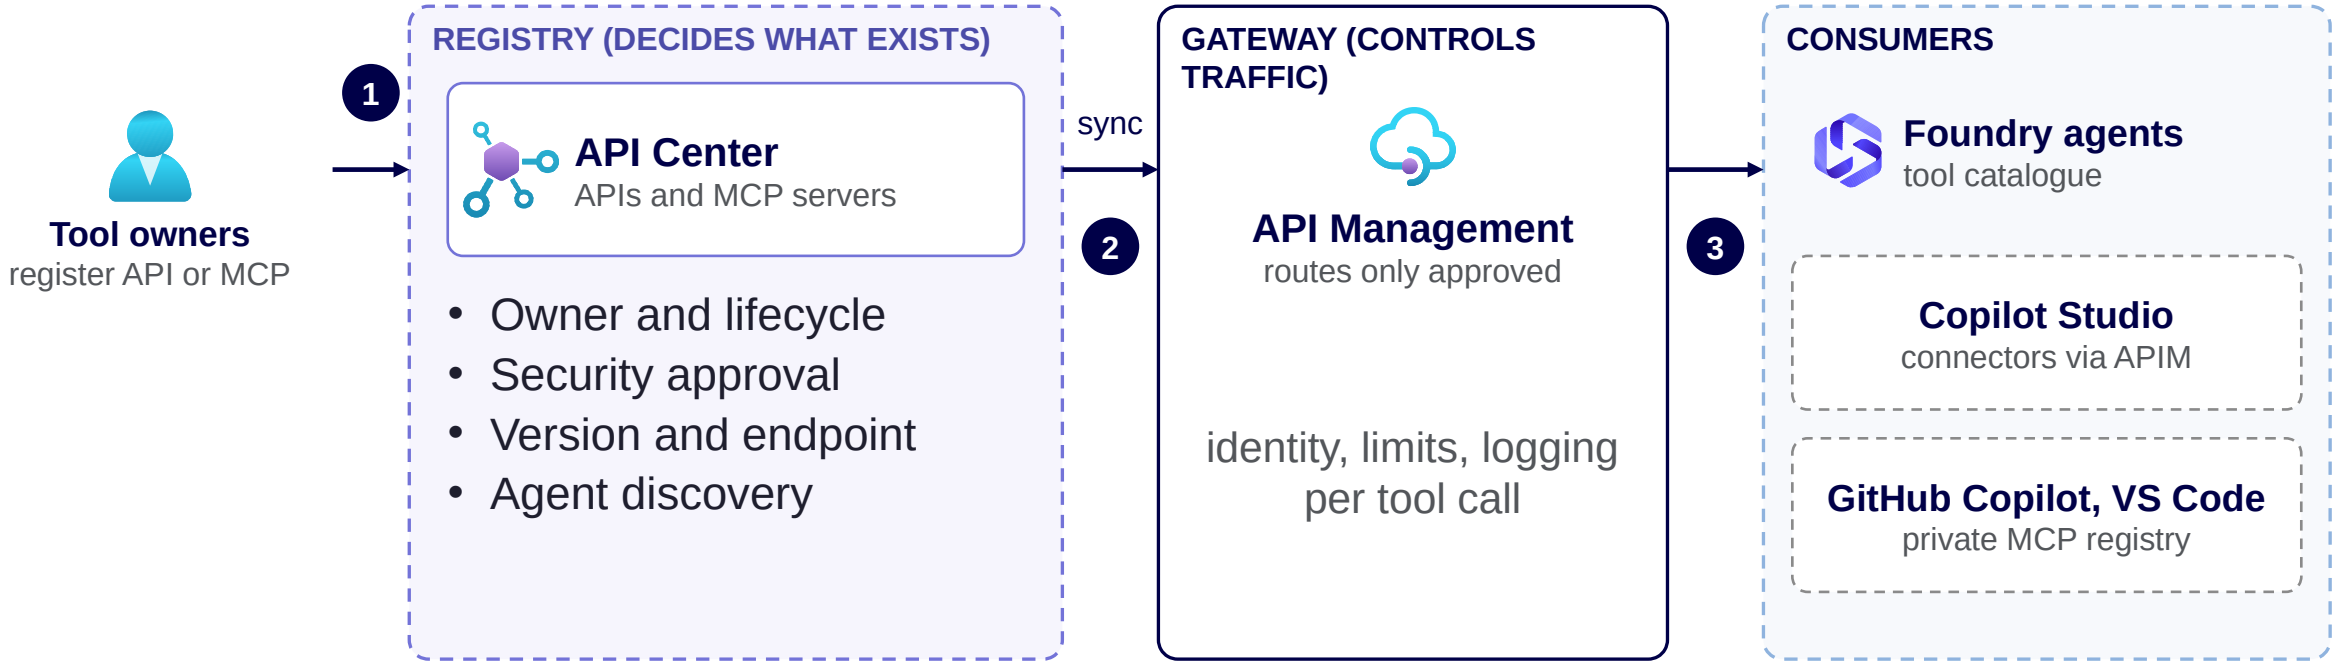

Request / data flow Telemetry or state read Path that must be blocked

Proposed reference architecture · CIS Infra custom design · not a Microsoft-published or Microsoft-endorsed architecture

PROPOSED REFERENCE ARCHITECTURE

API Center decides which tools exist; APIM routes them

Proposed rule: a tool is allowed only if it is registered and approved in API Center, and its traffic goes through API Management.

→ Request / data flow

Proposed reference architecture · CIS Infra custom design · not a Microsoft-published or Microsoft-endorsed architecture

ESTIMATE, NOT APPROVED

Readiness in 2 to 4 weeks; one-region build in 8 to 14

Package	Effort (role days)	Elapsed time	Indicative fee band*
Readiness assessment	10 to 20	2 to 4 weeks	$10k to $20k
Build, one region	45 to 90	8 to 14 weeks	$45k to $90k
API Center and tools	15 to 30	3 to 6 weeks	$15k to $30k
Multi-region add-on	20 to 40	4 to 8 weeks	$20k to $40k
Chargeback add-on	10 to 20	3 to 4 weeks	$10k to $20k

What moves an engagement to the high end: many consumers to move, complex private network, several regions, many tools or MCP servers.

Note: *Fee band = role days x illustrative $1,000 per day. Not a Cognizant rate or quote. Azure and licence spend are separate.

Most gateway failures are bypass failures

Direct endpoints left open

Effect: Controls bypassed

Handle: Private endpoints; local auth off; bypass tests

Owner: CIS Infra with Security

Preview tier in production

Effect: No SLA; limits change

Handle: GA tiers for production; preview only in pilot

Owner: Architecture owner

Unregistered tools reachable

Effect: Agents call unapproved tools

Handle: API Center rule plus network rules

Owner: Tool owners with Security

PAYG overflow unbudgeted

Effect: Spend spikes

Handle: Approved overflow, alerts, quota

Owner: Budget owner

Security threat model and regulatory notes: appendix SEC1 and SEC2.

TARGETS AFTER PILOT

Measure coverage and bypass; choose GA tiers today

Success measures

Coverage share of AI calls routed through the gateway

Bypass direct-call tests denied

Tools reachable tools that are registered and approved

Budget accuracy measured overshoot under load

Latency added p95 delay, measured per test plan

Decide today

- GA tier for production
- API Center as the tool allow-list
- Counter key from validated identity

Decide after evidence or approval

- Region and tier (capacity check)
- Overflow budget (budget owner)
- Sell rates (Finance)

90-day ask: budget and sponsor are inputs (deck 00 slide 10). Stop at day 45 if no qualified account.

APPENDIX

Technical and commercial appendix

Gateway choice, request flow, identity, token limits, routing, safety, tool registry, latency, caching, chargeback, resilience, SKU and regional detail, pricing, data handling, delivery bench, account play, RACI and sources.

Appendix index

13 **A0** Gateway controls and limits
14 **A2** Model API and tool API governance
15 **A3** Identity pattern (rebuilt)
16 **A4** Token rate limits and quotas
17 **A5** Token-limit policy flow (rebuilt)
18 **A7** Request, concurrency and budget controls
19 **A8** Backend pools and routing (rebuilt)
20 **A9** Circuit breaker (rebuilt)
21 **A10** PTU primary, PAYG overflow options
22 **A11** Content safety (rebuilt)
23 **A12** Tool authorisation and approval
24 **A13** Token metrics and cost allocation (rebuilt)
25 **A14** Private connectivity and regional resilience
26 **A15** Bypass prevention
27 **A17** Tier feature matrix
28 **A18** Regional availability snapshot
29 **A19** Verified API Management list prices
30 **A22** Acceptance gates
31 **K** Kill-switch cross-reference
32 **A23** Gateway choice guide
33 **A24** Latency test method

VERIFIED 11 OCT 2026

What the gateway controls, and what it cannot

Controls for routed traffic

- Caller identity and managed identity to backends
- Token rate limits and quotas per caller
- Content safety and prompt-attack checks
- Priority routing, retries and circuit breakers
- Token metrics per caller, app or agent

Limits leaders must accept

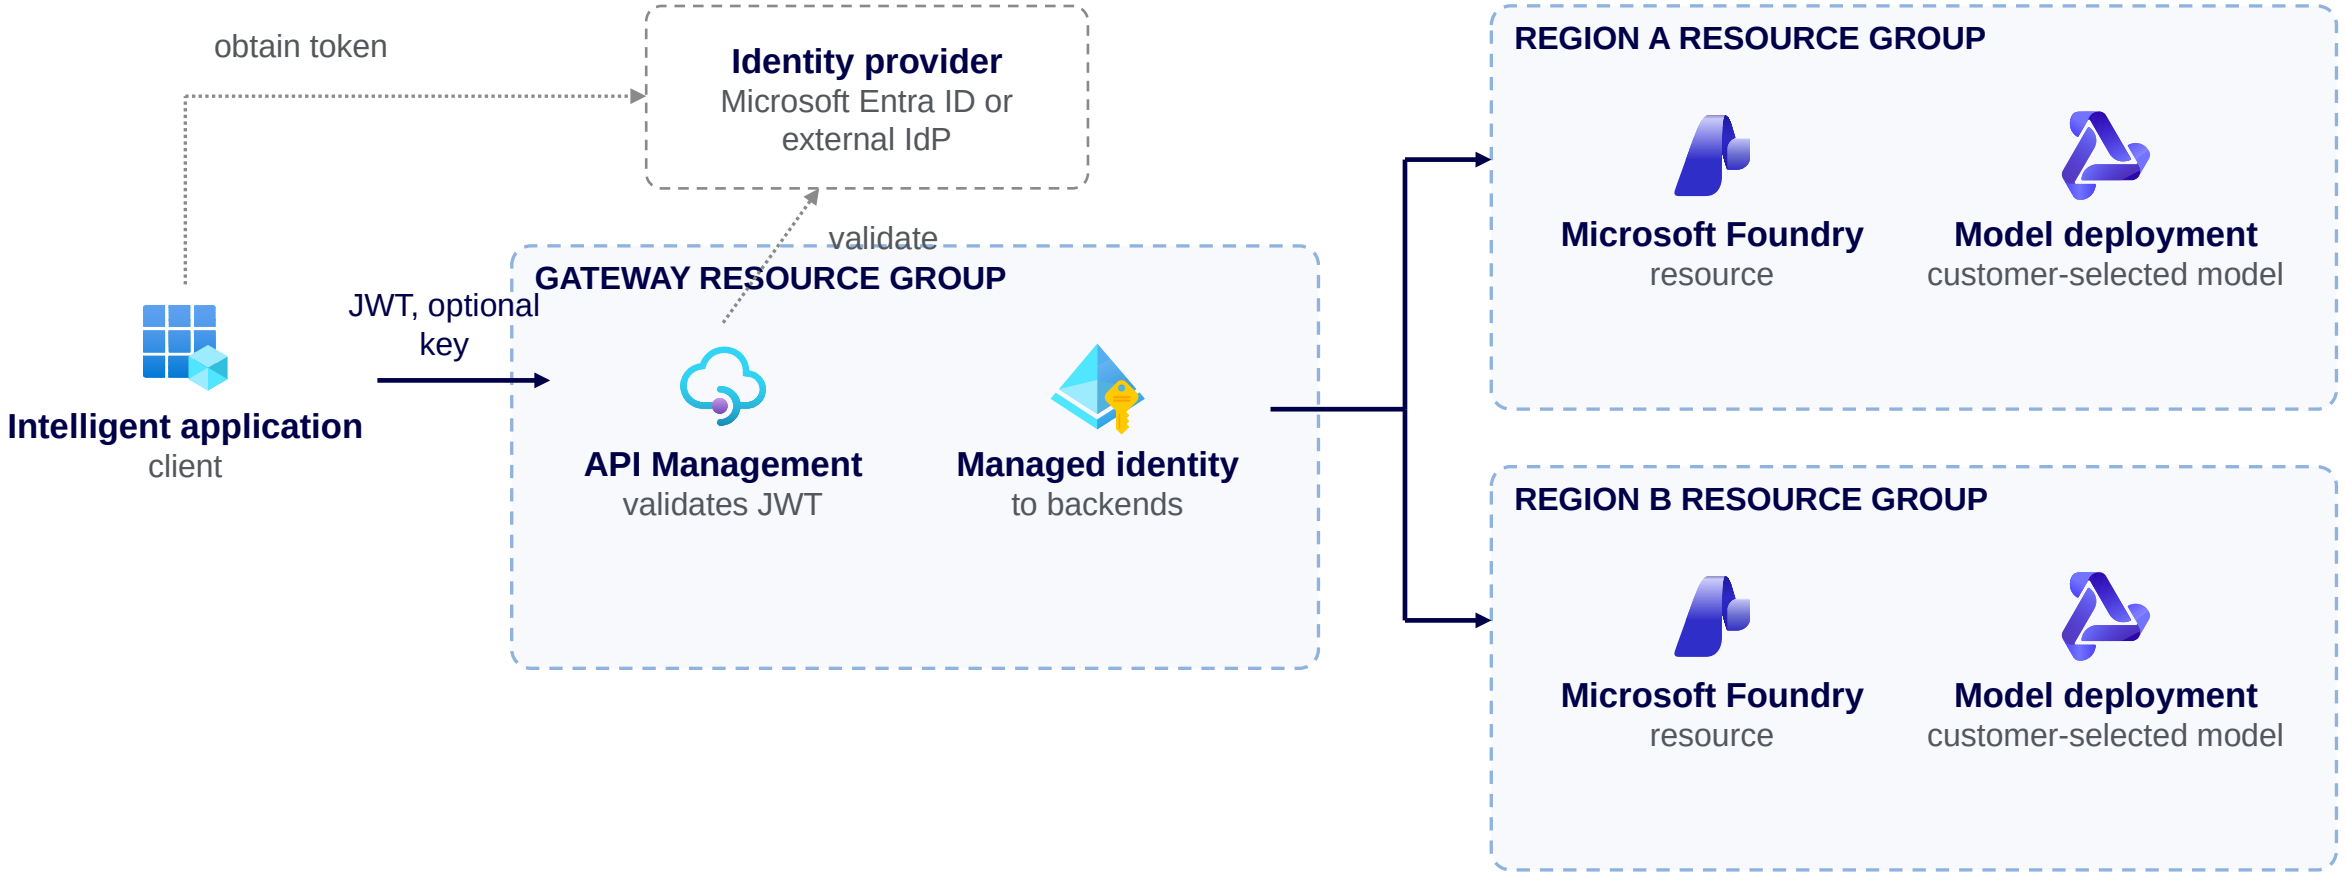

- No control over calls that bypass it
- Counters are per gateway, not global
- Concurrent calls can overshoot a limit
- Streaming usage is estimated
- Token caps are not exact currency caps

Decision: For a hard financial cap, add a budget service designed for bounded overshoot.

Model APIs and tool APIs need separate governance

Concern	Model APIs	Tool APIs (REST, MCP)
What a call does	Generates text or embeddings	Reads or changes business systems
Main limit	Tokens per minute and quota	Requests, transaction value, allowed operations
Authorisation	Caller may use this model deployment	Caller may do this operation on this target
Safety	Content safety, prompt shield	Input validation, approval for high-impact actions
Containment	Deny further model calls	Deny at gateway and at tool side
Owner	AI with CIS Infra	Tool owner with Security

Gateway identity pattern with current labels

Request / data flow Telemetry or state read

Adapted reference architecture · rebuilt from Microsoft source with current labels; original kept as historical reference

VERIFIED 11 OCT 2026

Token rate limits and quotas need a trusted counter key

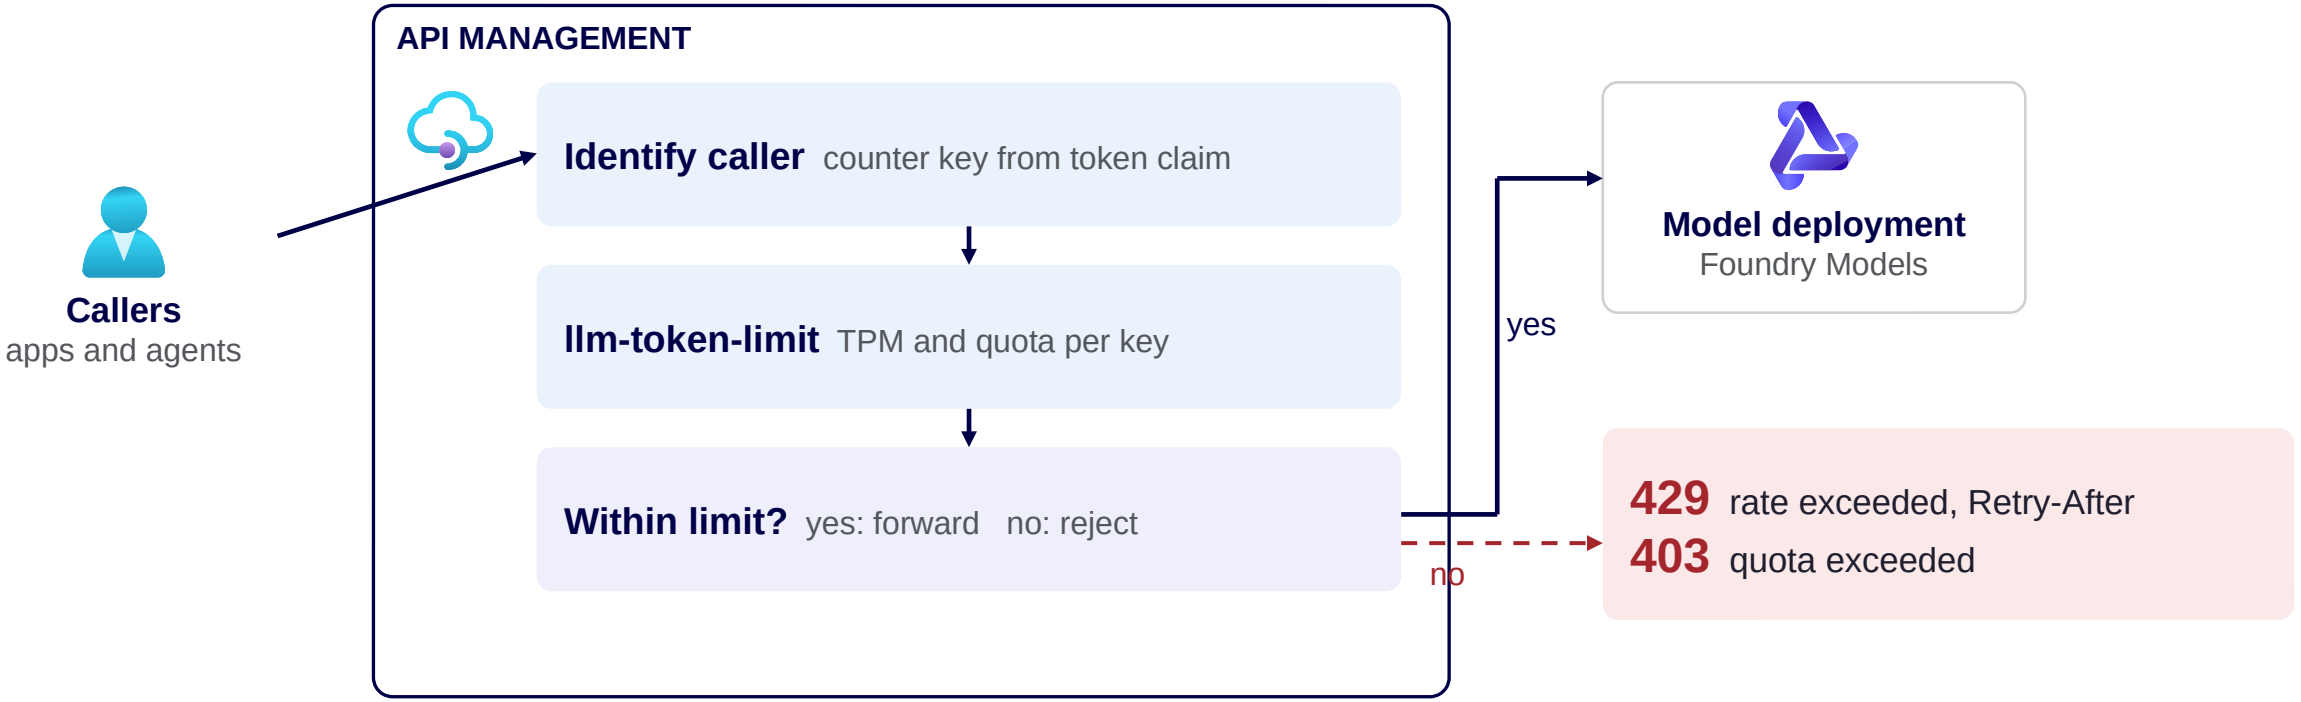

Control	Scope	Response when exceeded	Use for
tokens-per-minute	Per counter key, per gateway	429 with Retry-After	Smoothing bursts
token-quota (hourly to yearly)	Per counter key, per gateway	403	Allowance per team or agent
estimate-prompt-tokens	Per policy	Rejects earlier using estimates	Reducing wasted backend calls
Counter key	Expression on validated identity	n/a	Who the limit applies to

Limit: Token caps are not currency caps: price differs by model and by input, cached and output tokens.

Illustrative design only: 20,000 tokens per minute and 2 million tokens per day per application. Set real values from measured demand (offering 04).

REBUILT FROM LOW-RES SOURCE

Token-limit policy flow

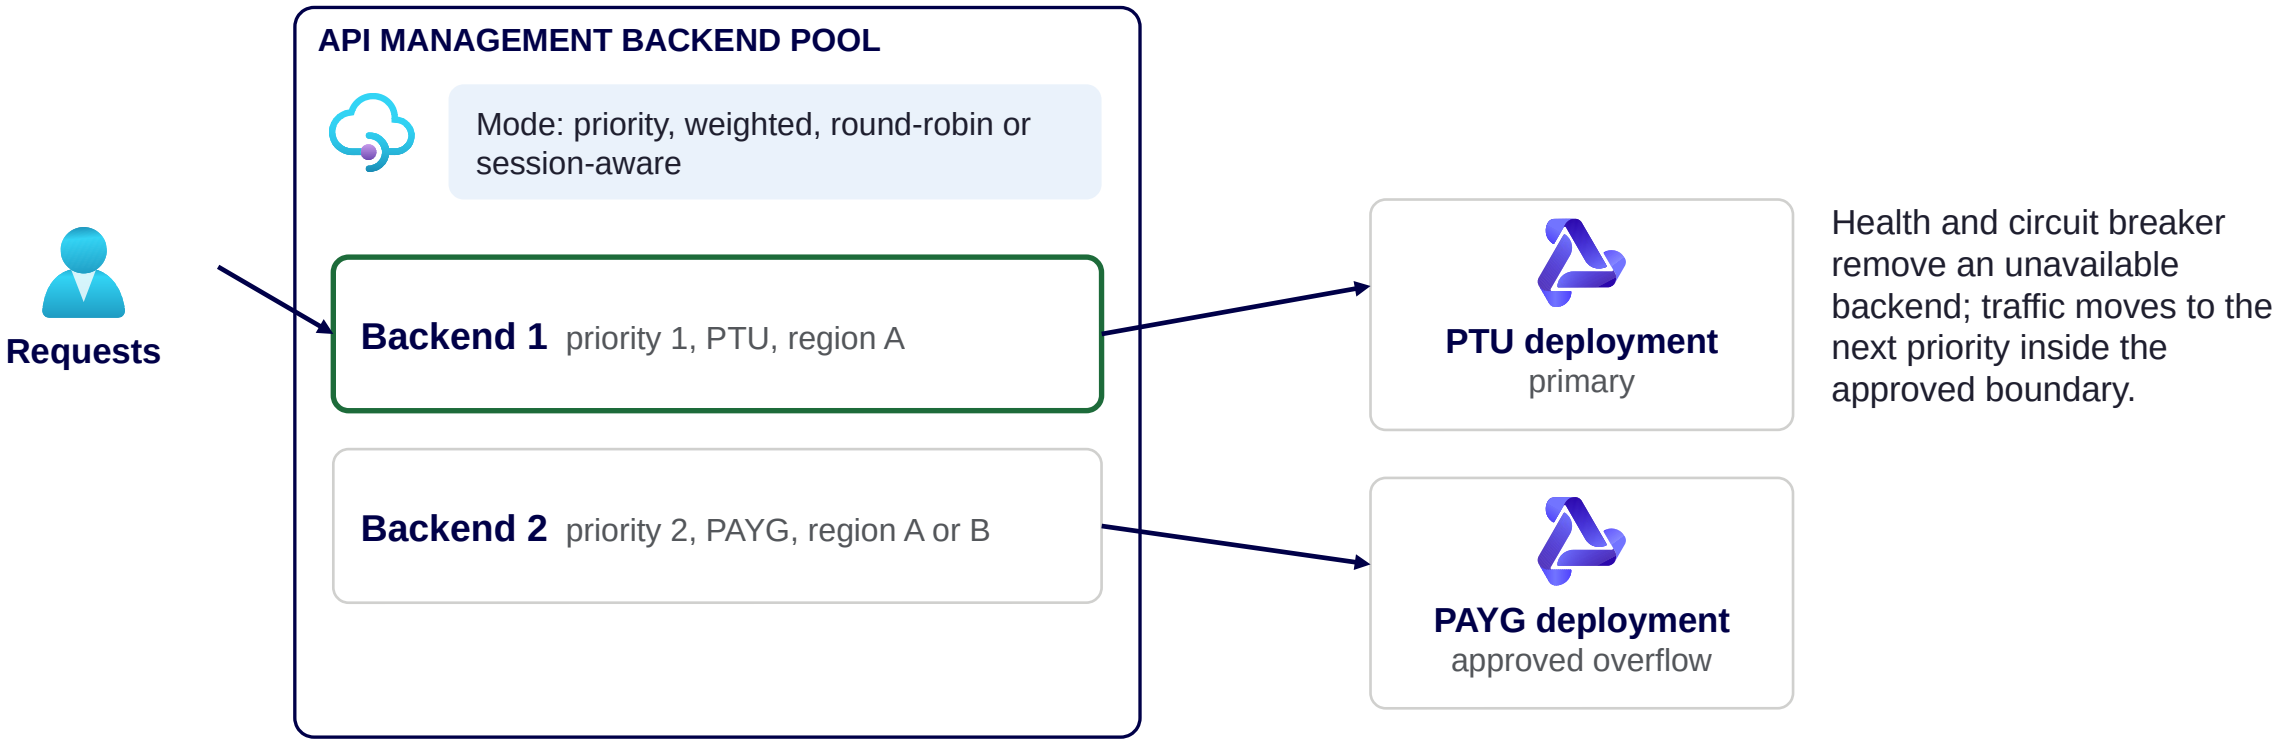

Limit: Counters are per gateway and in-flight requests can overshoot before the limit takes effect (appendix A0).

Rebuilt reference flow · official Azure icons; source image kept in the original references pack

Request limits, concurrency and budget controls

Control	Mechanism	Limit
Request rate	rate-limit-by-key on validated identity	Counts calls, not cost
Request quota	quota-by-key per period	Per gateway counters
Concurrency	limit-concurrency per key or backend	Queues or rejects; tune timeouts
Token allowance	llm-token-limit quota	Tokens, not currency
Currency budget	Custom budget service: price table x metered tokens, reservation before call	Custom build; bounded, not zero, overshoot
Azure budgets	Cost Management budget alerts	Alerts after spend; not a gate

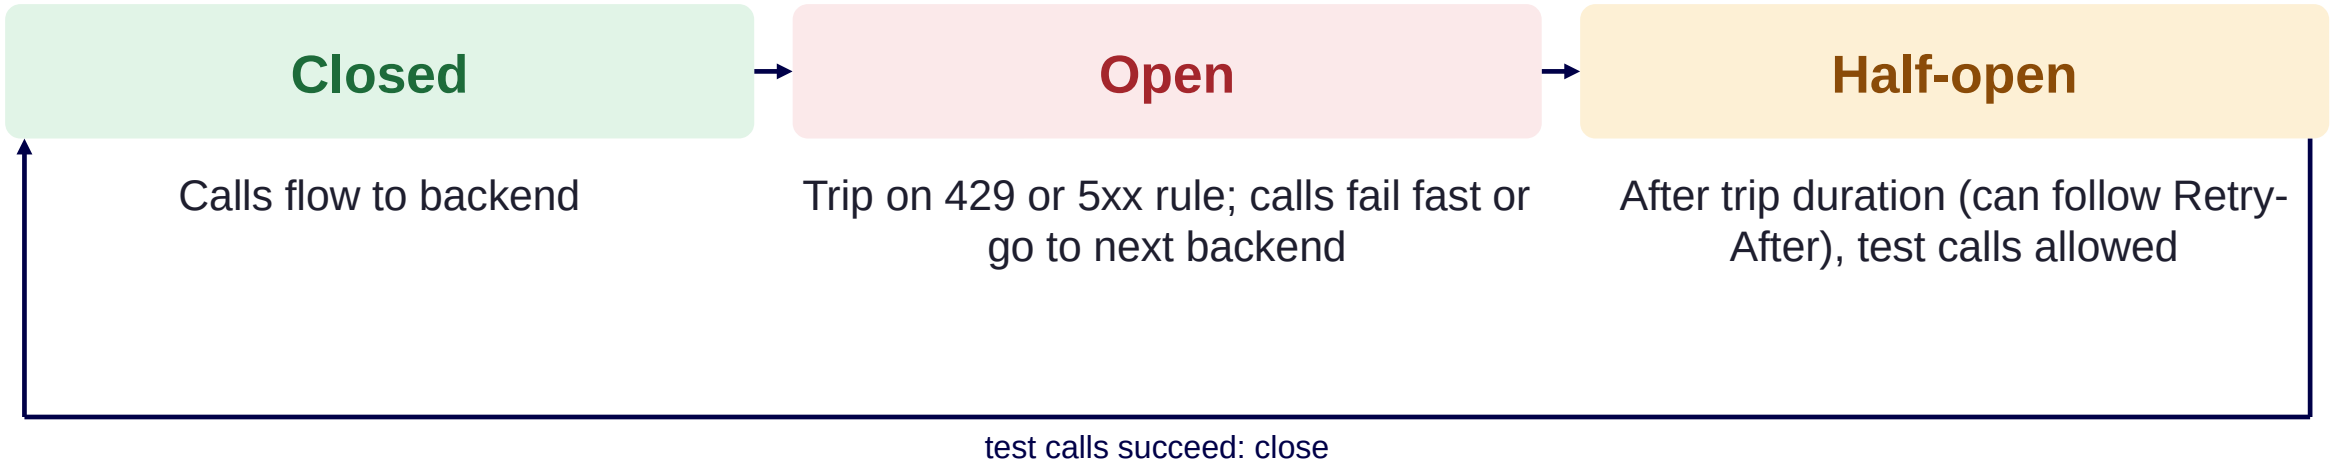

Backend pools and routing

Limit: Overflow and retries can raise PAYG spend. Fallback must stay inside the approved processing boundary.

REBUILT FROM LOW-RES SOURCE

Backend circuit breaker protects a dependency

Configured on the API Management backend; pairs with the backend pool for fallback.

Limit: Not an agent kill switch: it does not stop running work or revoke tool access. See appendix K.

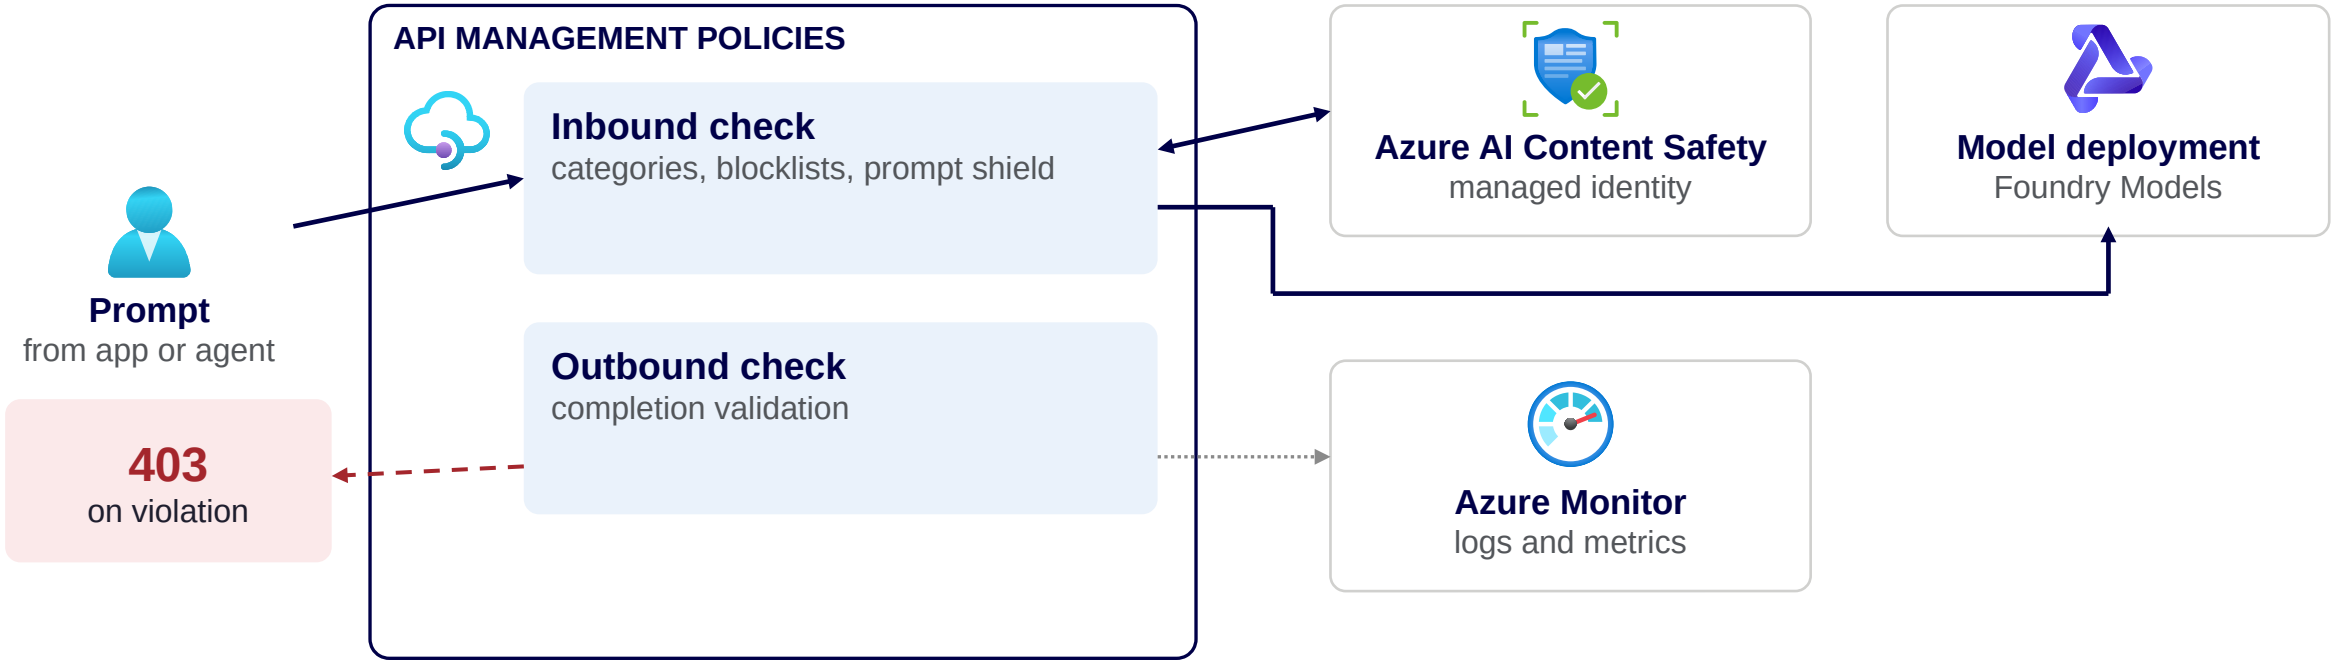

VERIFIED 11 OCT 2026

PTU primary with approved PAYG overflow: two ways

Aspect	Foundry spillover	API Management priority backends
Where it decides	Inside the Foundry resource	At the gateway
Scope	Same resource, standard deployment	Any approved backend, any region
Trigger	Provisioned deployment returns non-200, such as 429	Circuit breaker or health rule
Model support	Azure OpenAI models; not DeepSeek or Llama today	Any backend the gateway can call
Cost control	Overflow billed at standard rates	Overflow billed at standard rates; per-key limits apply
Choose when	Single resource, simple overflow	Several resources, regions or policies

Limit: Overflow is conditional capacity, not unlimited. Budget the PAYG share and alert on it.

Content safety in the gateway flow

Limit: Streaming: forwarding stops on violation without a 403. Test thresholds, false positives, latency and service failure.

Rebuilt reference flow · official Azure icons; source image kept in the original references pack

Tool authorisation and human approval

Moderate

Harm categories and prompt attacks on prompts and completions

Authorise

Allowed tool, target and operation per agent identity, enforced at gateway and tool side

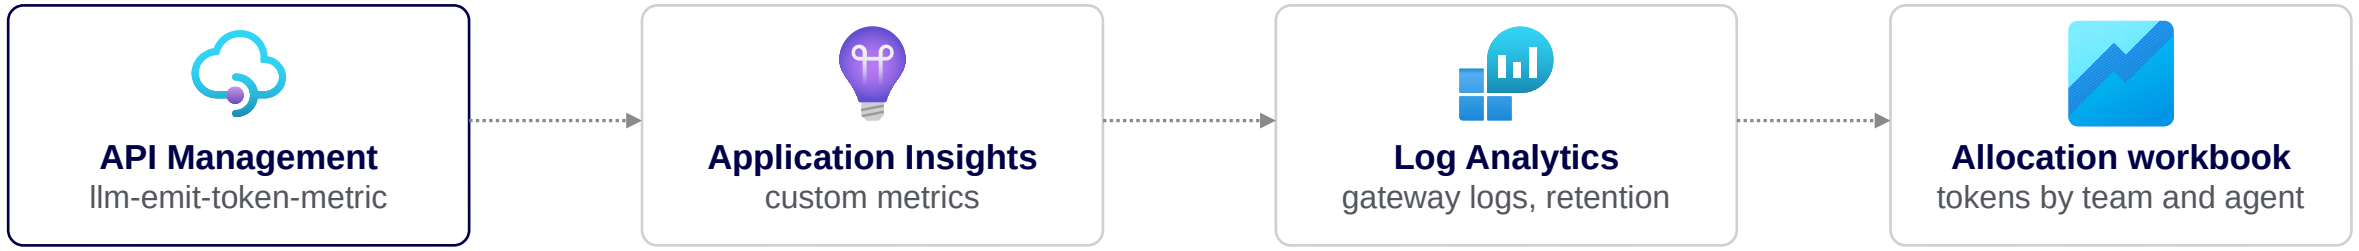

Approve

Human approval before high-impact actions, recorded with the request

Limit: Test fail-open versus fail-closed for each control. Approval services are custom and owned by the AI tower.

REBUILT FROM LOW-RES SOURCE

Token metrics, logs and cost allocation

Dimension	Source	Used for
Application or agent ID	Validated token claim	Allocation and containment scope
Team or cost centre	Product or subscription mapping	Showback
Model and deployment type	Backend selected	Price per token type
Region	Gateway and backend	Residency evidence

VERIFIED 11 OCT 2026

Private connectivity and regional resilience options

Pattern	Gateway failure domain	Network	Tier fit
One gateway, regional backends	Single gateway region	Private endpoints to each backend	Standard v2 or Premium v2
Multi-region gateway (built in)	Regional gateways, one control plane	VNet injection	Premium (classic) only
Two independent gateways	Separate instances, separate counters	Per-region private network	Any production tier
Zone-redundant gateway	Zones within one region	VNet injection	Premium v2 or Premium (classic)

Limit: Backend failover across regions leaves a single-gateway failure domain in place. Counters do not aggregate across gateways.

Bypass prevention checklist

Control	How	Negative test
No public model endpoints	Public network access disabled; private endpoints only	Call from internet fails
No keys in apps	Local auth disabled where supported; managed identity at gateway only	Key-based call fails
Data-plane RBAC only for gateway	Apps have no role on the Foundry resource	App identity call fails
Network path	NSG and UDR allow model endpoints only from gateway subnet	Direct call from app subnet fails
Detect drift	Azure Policy deny or audit; Resource Graph query for public endpoints	Policy flags a test resource

API Management tier capabilities that drive SKU choice

Capability	Developer	Basic v2	Standard v2	Premium v2	Premium (classic)
Inbound private endpoint	**Yes**	No	**Yes**	**Yes**	**Yes**
Outbound to VNet backends	**Yes**	No	**Yes**	**Yes**	**Yes**
VNet injection	**Yes**	No	No	**Yes**	**Yes**
Availability zones	No	No	No	**Yes**	**Yes**
Built-in multi-region	No	No	No	No	**Yes**
Self-hosted gateway	**Yes**	No	No	No	**Yes**
Production SLA	No	Check SLA	Check SLA	Check SLA	Check SLA

Limit: SLA terms are tier-specific and not stated on the feature page. Confirm on the Azure SLA page before contract.

Regional availability snapshot for v2 tiers

Region	Basic v2	Standard v2	Premium v2	AI Gateway tier (preview)
East US 2	Listed	Listed	Creation blocked	Listed
East US	Listed	Listed	Not listed	Not listed
Sweden Central	Listed	Listed	Creation blocked	Listed
West Europe	Listed	Listed	Not listed	Not listed
Germany West Central	Listed	Listed	Creation blocked	Not listed
France Central	Listed	Listed	Not listed	Not listed
Norway East	Listed	Listed	Listed	Not listed
UK South	Creation blocked	Creation blocked	Creation blocked	Not listed
UK West	Listed	Listed	Not listed	Not listed
UAE North	Listed	Listed	Not listed	Not listed

Limit: UK South has temporary creation blocks on all v2 tiers. Recheck before any quote or design commitment.

VERIFIED 11 OCT 2026

API Management list prices used in estimates

Meter (East US 2, USD list)	Unit price	About per month	Note
Basic v2 unit	$0.20548 per hour	$150	No inbound private endpoint
Standard v2 unit	$0.9589 per hour	$700	Calls: $0.025 per 10K after included tier
Standard v2 secondary unit	$0.68493 per hour	$500	Scale-out unit
Premium v2 unit	$3.83562 per hour	$2,800	VNet injection, zones
Premium (classic) unit	$3.829 per hour	$2,795	Built-in multi-region
AI Gateway tier requests	$0.00 per 10K (listed)	Unknown	Pricing to be announced; not free

Acceptance requires demonstrable evidence

Gate	Pass evidence	Approver
Access	Unauthorised and bypass calls denied	Customer security owner
Budgets	Rate and quota tests pass; overshoot measured and accepted	Customer platform owner
Resilience	Fallback stays inside approved boundary	Customer architecture owner
Safety	Thresholds tested; failure behaviour agreed	Customer security owner
Operations	Telemetry, rollback and runbooks accepted	Integrated service owner

Agent containment: how this offering contributes

1. **Block new requests**
   API Management ingress
2. **Cancel or isolate**
   runtime adapter
3. **Deny actions**
   outbound gateway, tool guard

What this offering provides

- Ingress enforcement point: reject quarantined agent IDs before work starts
- Outbound enforcement point: deny model and tool calls for quarantined scopes
- Per-agent token metrics that show whether containment worked
- A circuit breaker is not a kill switch: it protects backends, not the agent scope

Note: No universal instant stop, and the design is unproven until the PoC passes. Deck 02 builds it; deck 05 operates it.

Which gateway: choosing the right option

Option	Status	Use when	Watch out for
API Management Standard v2 or Premium v2	GA	Production gateway in one region; VNet integration (Premium v2 for injection)	Built-in multi-region needs Premium (classic)
API Management Premium (classic)	GA	Multi-region gateway, availability zones	Higher fixed cost per unit
API Management AI Gateway tier	Public preview	Pilot of AI-only gateway	No SLA; East US 2 and Sweden Central; pricing to be announced
Foundry AI gateway (APIM linked in Foundry)	Preview	Teams working inside the Foundry portal	Preview features; governance still in APIM
Existing third-party gateway	Customer choice	Strong existing investment	No CIS Infra accelerator; scope separately

Decision: Recheck status and regions before every quote. Preview features are pilot only.

Latency: how the added delay is measured

1 Baseline	Call the model deployment directly from a test client in the same region
2 Gateway only	Same calls through API Management with authentication only
3 Add policies	Switch on limits, then content safety, then logging, one at a time
4 Streaming	Measure time to first token with and without the gateway
5 Report	Added p50 and p95 delay per policy group; agree targets after

Azure Load Testing
repeatable runs

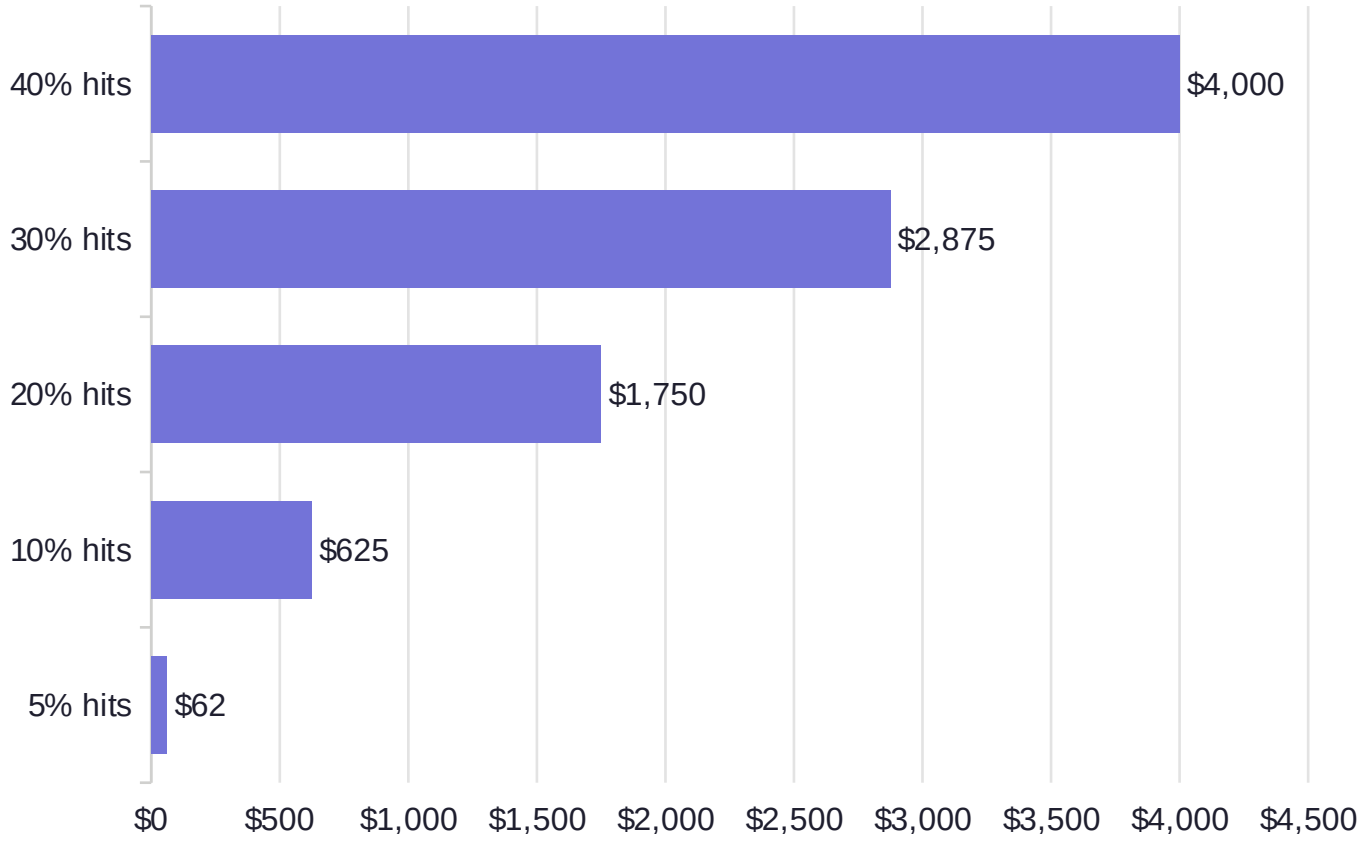

Not claimed

No latency number is promised before the customer baseline run.

SYNTHETIC EXAMPLE

LIST PRICES

Semantic caching: when it pays for itself

Break-even

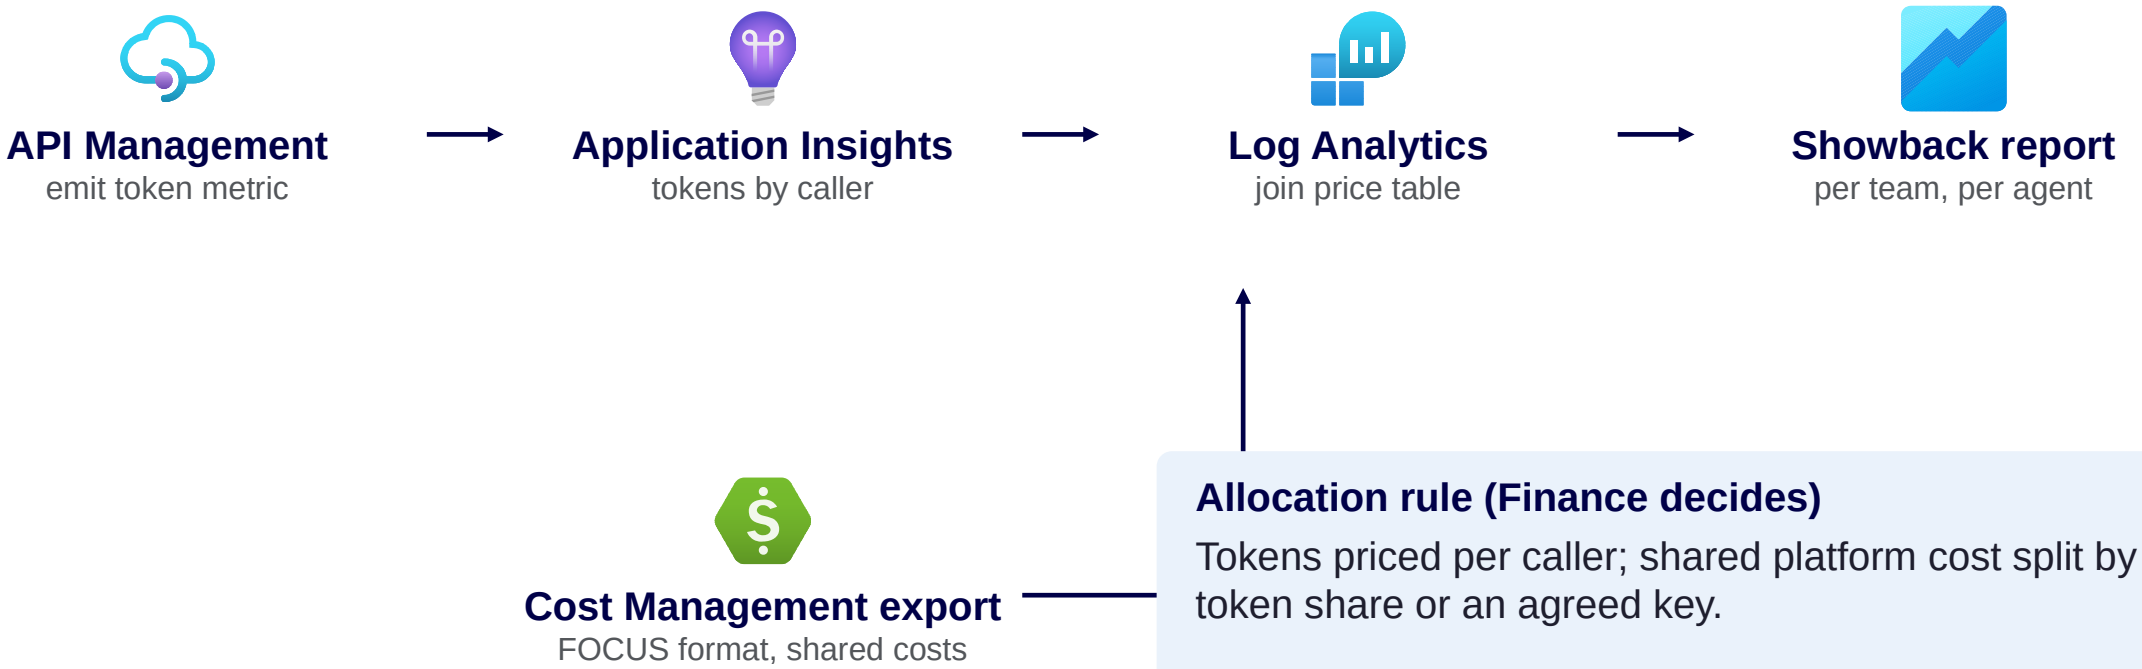

4.4% hit rate

Synthetic: 1M calls a month, $11,250 model spend, $500 cache cost.

Use for repeated, non-personal questions only.

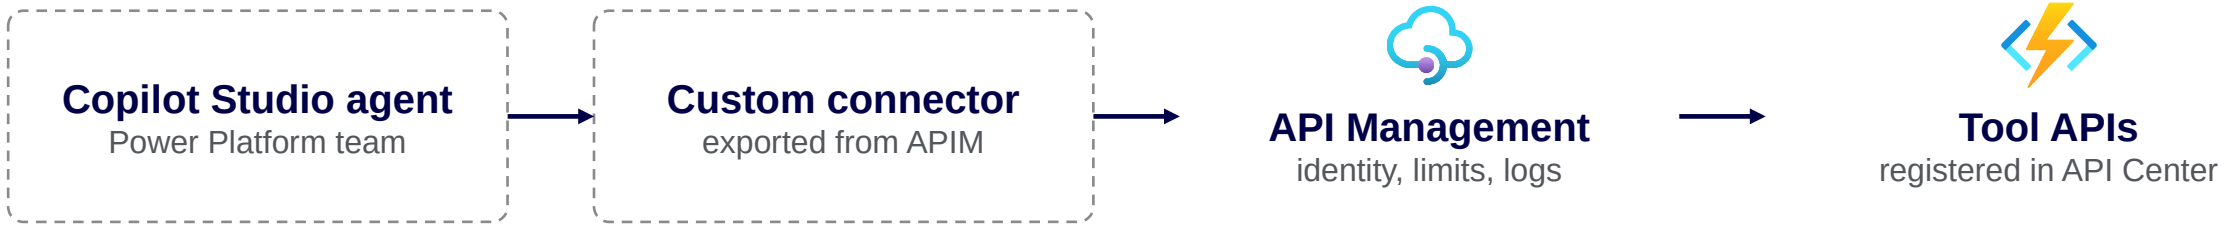

Note: Synthetic workload and cache cost. Model prices are gpt-5.4 Global list prices. Measure hit rate on real logs first.

Chargeback: from token metrics to a team bill

Decision: Showback first. Chargeback only after Finance approves the allocation rule. Streaming token counts are estimates.

Copilot Studio tool calls through the gateway

Who	Does what
Power Platform team	Environments, DLP policies, connector approval
CIS Infra	Gateway APIs, connector export, limits, logging
Tool owners with Security	Tool authorisation and registration
M365 and D365 teams	Microsoft 365 Copilot (outside this offering)

Limit: Copilot Studio model calls are Microsoft-managed and do not pass through the customer gateway.

Fixed price only after an assessment, with change triggers

1 Assess first
Short paid assessment before any fixed price

2 Name the triggers
Change triggers written into the SOW

3 Hold contingency
Amount set by Finance (input required)

4 Accept by gates
Evidence-based acceptance at each gate

Change trigger for this offering	Why it changes effort
More consumers than scoped	Each consumer needs migration and testing
Complex hub network	Private routing, DNS and firewall changes
Multi-region gateway	Premium (classic) units, failover tests
Many MCP servers or tools	Registration, approval and policy per tool

Telemetry stores counts and IDs, not prompts, by default

Data	Logged by default?	Protection	Retention (proposed)	Access
Token counts by caller, agent, model	Yes	Identity-derived dimensions only	13 months	Platform and FinOps roles
Request metadata (status, latency)	Yes	No content	90 days	Platform team
Prompt and completion content	No (opt-in)	Redaction, restricted workspace	7 to 30 days if enabled	Approved named engineers
Safety filter results	Yes	Category and score only	90 days	Security
Chargeback reports	Yes	Aggregated by team or agent	Per Finance policy	Finance, budget owners

Decision: Content logging is opt-in only, approved by Security and the data owner. The customer sets final retention.

Qualification scorecard and account shortlist template

Criterion (score 0, 1 or 2)	Evidence
Funded workload	Named owner, budget route, decision date
Platform authority	Who can approve tenant and network changes
Executive sponsor	Named and engaged
Data access	Source owner and rights confirmed
Region and capacity	Model, deployment type and quota checked
Data residency gate	UK or Middle East in-country need checked (deck 01)
Regulated bank	Model risk and DORA position known
Consumers	Several apps or agents calling models
Tool estate	Count of APIs and MCP servers to register

Account shortlist (template, empty)

Account	Sponsor	Workload	Blocker	Score	Next action

Decision: Quote implementation at 14+ with no zero on funding, authority, sponsor or residency. Otherwise sell the assessment.

ESTIMATE, NOT APPROVED

How the effort and duration ranges were built

Package	Low case assumes	High case assumes
Readiness assessment	One region, existing APIM, few consumers	Several regions, no APIM, many consumers
Build, one region	One region, five consumers, standard hub network	Complex hub, twenty consumers, custom policies
API Center and tools	Up to ten tools, owners known	Fifty tools, owners unknown, MCP servers in several runtimes
Multi-region add-on	Two regions, backend failover only	Premium classic multi-region gateway, DR tests
Chargeback add-on	Showback by product	Chargeback by team and agent, FOCUS reconciliation

Basis and recalibration plan

Basis: bottom-up author estimate. Readiness = consumer and network survey, design note. Build = APIM instance, about 10 policies, private networking, load and bypass tests, per consumer migration. Recalibrate after every pilot: record actual role days per package, compare with the band, and reset bands each quarter. Owner: integrated service owner with Finance.

AI threat model: what can go wrong, and who controls it

Threat	Example	Control	Owner
Bypass	App calls model endpoint with a key	Private endpoints, local auth off, bypass tests	CIS Infra
Prompt injection	Malicious text in a tool result	Prompt Shields, tool-side validation	Security, tool owner
Unapproved tool	Agent calls an unregistered MCP server	API Center allow-list, network rules	Security
Spoofed caller	Counter key set by the client	Key from validated token claims	Security
Data leakage	Sensitive data in prompts or logs	Purview, log redaction, Defender alerts	Security
Denial of wallet	Runaway agent burns tokens	Token quotas, concurrency, alerts	CIS Infra, budget owner
Supply chain	Compromised MCP server or connector	Registration review in API Center; pinned versions	Security, tool owner
Agent identity misuse	Agent token reused by another caller	Validated token claims as counter key; Conditional Access for agents	Security

Regulation: who holds which duty, and where we help

Party	Likely EU AI Act role (indicative)	What this offering supports
Customer deploying AI systems	Deployer (usually)	Logging of model and tool calls; safety filtering
Customer building its own AI system	Provider	Records of model use and safety controls
Cognizant CIS Infra	Usually neither: infrastructure service provider	Role stated in the contract; Legal confirms

Area	Checkpoint	Status (checked 11 Oct 2026)
EU AI Act	Annex III high-risk duties from 2 Dec 2027; Annex I from 2 Aug 2028	Third-party summary (Orrick); EUR-Lex not verified
EU DORA	ICT risk and ICT third-party contract terms for financial entities	Applies from 17 Jan 2025 (EUR-Lex)
EU NIS2	Cyber risk management for essential and important entities	National laws; deadline 17 Oct 2024
UK	Regulator-led AI principles; UK GDPR	Not re-verified: confirm current position
UAE	Federal Decree-Law 45 of 2021 (personal data)	Executive regulations: verify status
Saudi Arabia	PDPL (enforceable Sep 2024); NCA cloud controls CCC-1:2020	Third-party summary; verify transfer rules
US banks	Interagency model risk guidance (17 Apr 2026) replaced SR 11-7	Generative and agentic AI out of scope; governance still expected

Glossary of terms used in this deck

Term	Meaning
A2A	Agent-to-agent protocol for agents calling other agents
Agent 365	Microsoft control plane to register, observe and govern agents (per-user licence)
API Center	Azure registry for APIs and MCP servers; decides which tools exist
APIM	Azure API Management; the gateway that controls traffic
Copilot Studio	Microsoft low-code tool to build agents; consumption in Copilot credits
Data Zone	Model processing inside a Microsoft data zone (US, EU or APAC)
DORA	EU Digital Operational Resilience Act for financial entities
FOCUS	FinOps Open Cost and Usage Specification for cost data exports

Term	Meaning
Foundry	Microsoft Foundry: Azure platform for models and agents
FTE	Full-time equivalent person
MCP	Model Context Protocol: standard way for agents to call tools
MRM	Model risk management (banking supervision)
NIS2	EU directive on cybersecurity for essential sectors
PAYG	Pay as you go: pay per token used
PDPL	Personal Data Protection Law (Saudi Arabia, UAE)
PIM	Entra Privileged Identity Management: just-in-time admin access

Term	Meaning
PTU	Provisioned throughput unit: reserved model capacity, billed per hour
RACI	Responsible, Accountable, Consulted, Informed
RFP	Request for proposal
RTO / RPO	Recovery time objective / recovery point objective
SOW	Statement of work
Token	Unit of text a model reads or writes; the main pricing unit
TPM	Tokens per minute

INPUT REQUIRED

Who delivers it, and what sellers need before day one

Role	Skills needed	Certification (verify current)	Ramp-up (estimate)	Bench now
Gateway engineer	APIM policies, API Center, MCP	Azure Developer Associate	2 weeks	Input required: delivery lead
Network engineer	Private endpoints, DNS, VNet integration	Azure Network Engineer Associate	1 week	Input required: delivery lead
Security engineer	Entra identity, content safety, prompt shields	Identity and Access Administrator Associate	2 weeks	Input required: delivery lead
Test engineer	Load and bypass testing	None required	1 week	Input required: delivery lead

Presales kit item	Status	Owner
Executive deck, talk tracks, customer pitch	Exists (v4.0 draft)	Offering owner
Demo environment	To build	CIS Infra lab owner (input required)
SOW template and estimator	To build	Presales lead with Finance
RFP answer bank	Draft exists (register)	Presales lead
Case study	After first pilot	Account team
Policy library and test harness	To build	CIS Infra gateway lead

How account teams use it, and the contract risks to manage

Fits in the account plan

API or integration programme where many teams call models.

First deal (illustrative)

Readiness $10k to $20k; build $45k to $90k.

Expansion path

API Center tools, multi-region, chargeback, then managed operations (05).

Business-led entry

CFO: AI cost attributed to each team and agent.

Contract topic	Proposed position	Owner
Liability cap	Per Cognizant standard terms; no uncapped liability for agent behaviour or customer data	Legal
Service-level penalties	Only on response targets inside coverage hours; none on Azure availability	Legal with delivery
IP of accelerators and code	Cognizant keeps reusable accelerators; customer owns its configuration and code	Legal
Change control	New scope, regions or runtimes priced by change request	Delivery with Finance
Bypass	Customer closes direct endpoints named in the SOW; coverage reported	Delivery

Microsoft motion: engage the Azure AI apps and agents specialist (Cloud and AI Platforms); drives API Management and model token consumption.

NO APPROVED QUOTE

Six cost layers are priced and owned separately

Layer	Applies to this offering	Pricing formula or unit	Missing input (owner)
1 CIS Infra services	Gateway design, build, policies, tests	Role days x approved sell rate	Sell rates (Finance)
2 Specialist towers	Security identity and safety; AI routing; DevOps CI/CD	Tower role days x tower rate	Tower estimates (tower leads)
3 Recurring managed service	Gateway operation (offering 05)	Base + APIs x rate + coverage	Service rates (Finance)
4 Azure platform consumption	APIM units, logs, private endpoints, Content Safety	Units x hours; GB; calls (appendix A19)	Customer agreement prices (customer)
5 Model consumption	Traffic routed through the gateway	Tokens x price or PTU x hours	Volumes (AI); PTU reservation price (Microsoft)
6 GPU hosting	Only for self-hosted backends	See offering 04	n/a unless selected

Revenue recognition (Finance owns): Fixed-price milestones per gate (readiness, design, build, acceptance). Owner: Finance.

Limit: Layers 4 to 6 are customer Azure spend unless a resale agreement says otherwise. They are not CIS Infra services revenue.

PROPOSED, VALIDATE WITH TOWERS

Delivery RACI: one accountable role per activity

Activity (proposed, validate with towers)	CIS Infra	Secu-rity	Dev-Ops	AI	Data	Data Eng.	Integr. service owner	Cust. work-load owner	Comm. / fin.
Agent 365, Entra CA, Purview and Defender policy	R	A	I	C	I	I	I	C	I
Gateway design and integrated plan	A/R	C	C	C	I	I	R	C	I
Identity and safety policy requirements	C	A/R	I	C	I	I	I	C	I
API contracts and model routing choice	C	C	I	A/R	I	I	I	C	I
APIM build, network, private endpoints	A/R	C	C	I	I	I	I	I	I
Policy CI/CD and rollback	R	C	A/R	C	I	I	I	I	I
Load, bypass and failover testing	A/R	R	R	R	I	I	C	C	I
Service acceptance	R	R	I	R	I	I	R	A	I
Gateway operations and health	A/R	C	C	C	I	I	R	I	I
Agent containment via gateway	R	R	I	R	I	I	A	C	I
Recovery of gateway service	A/R	C	R	I	I	I	C	C	I
Budget and cost allocation rules	R	I	I	C	I	I	C	C	A
Pricing, attribution and quote	C	C	C	C	I	I	R	I	A

A accountable (one per row) **R** responsible C consulted I informed. **Integrated service owner** = named Cognizant delivery lead for the end-to-end outcome.

Delivery and commercial readiness checklist

Item	This offering
Entry criteria	Several consumers or agents, named API owner, approved models and regions, landing zone network
Discovery inputs	Consumers, models, tools, identities, traffic shape, regions, existing APIM
Deliverables	Gateway, network, policies, policy register, dashboards, tests, runbooks
Scope boundaries	Agreed APIs, policies and regions; tool-side authorisation by tool owners
Dependencies	Offering 01 network, Security identity design, AI routing, DevOps CI/CD
Delivery phases	Discover, design, build, prove (estimate per engagement)

Item	This offering
Acceptance criteria	Appendix A22 gates
Customer responsibilities	API ownership, budget rules, approval of overflow and regions
Pricing units	Role days per work package; Azure meters separate
Change-control triggers	New region, tier change, new API classes, caching, multi-region gateway
Support handoff	Offering 05 or customer API platform team
Success indicators	Gateway coverage, bypass tests, measured overshoot, attribution

Decisions that need an owner and a date

Decision	Decide when	Proposed owner	Evidence needed
Production on GA tiers; AI Gateway tier as pilot only	Now	Architecture owner	Preview status (A23)
Counter key derived from validated identity	Now	Security	Identity design
Tier and region per pursuit	Before quote	CIS Infra	Region snapshot recheck
Overflow budget and alerts	Customer approval	Customer budget owner	PAYG share forecast
Hard currency cap needed or not	Customer approval	Customer budget owner	Overshoot test results
API Center as tool and MCP allow-list	Now	Security with CIS Infra	Tool estate count
Copilot Studio connector routing	Per pursuit	Power Platform team	Connector inventory
Sell rates and attribution	Finance approval	Finance	Costing model
