COGNIZANT · AZURE AI PLATFORM SERVICES

AI Platform / Landing Zone

A governed Azure foundation for your first AI workload, then the next

Built on Microsoft Azure

The challenges we hear most often

Pilots stall

Network, identity and environment gaps block the move from pilot to production.

Every team rebuilds

Without a shared platform, each AI project repeats the same setup.

Residency questions

Model processing location must match your data and regulatory needs.

Our approach

We assess, extend or establish your Azure AI landing zone on Microsoft’s AI Landing Zone accelerator, with private networking, identity, monitoring and cost controls.

1 Assess
Access, network, capacity and residency checked

→

2 Design
Subscriptions, policy, network, identity

→

3 Build
Infrastructure as code on Azure Verified Modules

→

4 Prove
Tests for network paths, rollback and controls

→

5 Hand over
Runbooks to your team or our run service

What you get

- Reproducible platform built from code
- Private endpoints and controlled egress
- Separate development and production (test optional)
- Monitoring, budgets and recovery tested
- A documented, accepted environment

How we engage

Option	What it covers	Typical duration
Assess	Gap register and plan	3 to 5 weeks
Extend	Add AI to your existing landing zone	8 to 12 weeks
Establish	New foundation plus AI environments	12 to 20 weeks

Note: Typical durations. Scope and price are agreed after a short assessment.

Built on Microsoft Azure

Uses Microsoft’s Azure AI Landing Zones accelerator (Bicep or Terraform on Azure Verified Modules) and Microsoft Foundry.

Note: Preview features are used only in pilots. Production uses generally available services.

Suggested next steps

1. Confirm the first AI workload and region
2. Share current landing zone design
3. Agree the assessment start date
