AI Capacity and FinOps Assessment

Measure demand first, then buy AI capacity on evidence

Built on Microsoft Azure

The challenges we hear most often

Spend grows faster than use

Agent loops and retries multiply model tokens.

Commitments outlive models

Models retire within months; reserved capacity may not move with them.

New licence lines

Agent licences and Copilot Studio credits add costs outside the Azure bill.

Our approach

A fixed-scope assessment that measures your real usage, compares pay-as-you-go, reserved, hybrid and self-hosted options on one cost basis, and sets clear decision gates.

1 Instrument
Usage telemetry baseline

→

2 Profile
Workloads and demand shape

→

3 Model
Options on one cost boundary

→

4 Test
Sensitivity and break-even

→

5 Decide
Decision memo and gates

What you get

- Measured demand by workload
- Break-even price for reserved capacity
- Model lifecycle and commitment risks
- Licence cost view for agents
- A decision memo with next steps

How we engage

Option	What it covers	Typical duration
Assessment	Fixed scope	4 to 6 weeks
Benchmark add-on	Capacity or GPU benchmark	2 to 4 weeks
FinOps operating model	Showback and review cadence	4 to 6 weeks

Note: Typical durations. Scope and price are agreed after a short assessment.

Built on Microsoft Azure

Uses Azure Cost Management exports (including FOCUS format), API Management token metrics and Microsoft Foundry deployment metrics.

Note: Preview features are used only in pilots. Production uses generally available services.

Suggested next steps

1. Choose one or two workloads
2. Share cost data access and agreement prices
3. Agree the assessment start date
