COGNIZANT · AZURE AI PLATFORM SERVICES

Azure AI Platform Services

From first assessment to a governed, operated AI platform on Azure

Built on Microsoft Azure

The challenges we hear most often

Agents spread fast

Teams build agents in several tools; few organisations can list, own or stop them all.

Costs are hard to predict

Agent loops multiply model usage; reserved capacity can outlive the model it was bought for.

Rules are arriving

EU AI Act and sector rules expect an inventory, ownership and oversight.

Our approach

We help you build, govern and run your Azure AI platform, using Microsoft's own tools first and adding only what they do not cover.

1 Assess
Measure demand, cost and gaps

→

2 Build
AI landing zone on Microsoft accelerators

→

3 Control
One governed path for model and tool calls

→

4 Govern
Every agent owned and observed; stop path proven first

→

5 Run
Monthly operations and cost reviews

What you get

- A platform your AI teams can deploy to in weeks
- One governed gateway and an approved tool list
- An agent inventory with owners; a stop path proven before it is relied on
- Cost evidence to buy capacity and licences wisely
- A named operator with monthly service reports

How we engage

Option	What it covers	Typical duration
Assessment	Short, fixed scope	2 to 6 weeks
Build	Landing zone, gateway or agent governance	8 to 20 weeks
Run	Monthly managed service	Ongoing

Note: Typical durations. Scope and price are agreed after a short assessment.

Built on Microsoft Azure

Built on Microsoft Foundry, API Management, API Center, Agent 365, Entra, Defender and Purview, configured first and extended only where needed.

Note: Preview features are used only in pilots. Production uses generally available services.

Suggested next steps

1 Pick the area that matters most today

2 Agree a short assessment scope

3 Share access to the relevant subscriptions and cost data
