CIS INFRA · INTERNAL OFFERING PROPOSAL · FOR SENIOR LEADERSHIP REVIEW

Azure AI Platform Portfolio

Five defined CIS Infra offerings for the Azure AI platform: leadership chooses which to test

Master portfolio view for decks 01 to 05 · US, Europe, UK and Middle East pursuits

PROPOSED OFFERING

Pick from five defined offerings and fund a 90-day test

Problem Customers scale AI agents on platforms nobody owns end to end: capacity, cost, control and operations.

Offer Five CIS Infra offerings: assess, build, control traffic, govern agents and run. Each sells alone or in sequence.

Outcome Governed Azure AI platforms in production, with recurring CIS Infra revenue from operations.

Value Customers reach production faster with measured cost; Microsoft gains Azure consumption; we gain services.

Decision requested

- Choose which offerings to test: one, several or all five
- Name a sponsor and owner for each
- Fund a 90-day validation with stop rules

Limit: Rates, budgets and sponsors are inputs required. Fee bands use an illustrative $1,000 per role day.

Agent sprawl, model churn and AI rules create 2026 demand

Agent control planes are GA

Agent 365 has been generally available since 1 May 2026, so agent governance is now a budget line.

Source: Microsoft Security blog

Models retire every few months

gpt-4.1 retires 14 Apr 2027 and gpt-5.4 on 2 Sep 2027. Capacity and routing must keep moving.

Source: Foundry retirement schedule

Regulation has dates

EU AI Act high-risk duties apply from 2 Dec 2027 (Annex III); DORA has applied since 17 Jan 2025.

Sources: Orrick (third party; EUR-Lex text not verified); DORA: EUR-Lex

Who buys

CIO or AI platform leader with the CISO delegate, FinOps lead and IT service owner; CFO or head of operations for business cases.

What triggers the purchase

Agents moving to production; unexplained AI spend; an audit or incident; a Microsoft licence or capacity decision.

No pipeline or customer demand is claimed. Account shortlist and qualification scorecard: deck 00 appendix Q1.

ESTIMATE, NOT APPROVED

Each option suits a goal; we would start with 04 and 03

Offering	First sale	First revenue	Good choice if you want
04 FinOps Assessment	$20k to $40k	4 to 6 weeks	A fast, low-risk start
01 Landing Zone	$15k to $30k, then $140k to $220k	3 to 5 weeks	Largest one-time deals
03 AI Gateway	$10k to $20k, then $45k to $90k	2 to 4 weeks	Broad, repeatable demand
02 Agent Governance	$15k to $25k, pilot later	3 to 4 weeks	Edge, once proven
05 Managed Operations	$30k to $60k a month	4 to 8 weeks	Recurring revenue

Author recommendation

Start with 04 and 03.

Fastest to revenue and lowest internal build effort (A9). Pair 03 with a 01 assessment where no landing zone exists. Run the 02 PoC in parallel.

Leadership decides.

Note: Fee bands use an illustrative $1,000 per role day, not a Cognizant rate. Detail: deck 00 appendix A1; business case: deck 00 appendix A8.

PROPOSED BOUNDARIES

M365 Copilot stays with M365 and D365; we own the Azure side

Cognizant M365 and D365 teams	Shared: joint rules apply	CIS Infra offerings 01 to 05
Microsoft 365 Copilot Microsoft 365 apps (M365 team, to confirm)	**Copilot Studio** Power Platform admins it; we govern its agents	**Foundry and AI landing zone** offering 01
Copilot in Dynamics 365 D365 team, to confirm	**Agent 365 and Entra** Security owns policy; we implement	**API Management and API Center** offering 03
Adoption and change licences, rollout, training	**Purview readiness** Security leads; we supply inputs	**Governance, FinOps, operations** offerings 02, 04, 05

Decision: Open: the M365 versus D365 Copilot split and the joint-deal lead (deck 00 register D1, owners named).

CHECKED 11 OCT 2026

Microsoft gains consumption; we gain co-sold services

Consumption for Microsoft	Services co-sell	Funding and assessments
Governed platforms move AI workloads into production, which grows Azure use	Needs a Solutions partner designation, a specialization or Azure Expert MSP	Azure Accelerate where eligible for discovery; we charge for the decision memo
Owner: offering owners	Owner: alliance team to confirm status	Owner: alliance team, per customer

Decision: Specializations to confirm: AI Platform on Microsoft Azure; AI Apps on Microsoft Azure. No funding assumed in any price.

ESTIMATE, NOT APPROVED

FinOps assessment: a fast, low-risk start in 4 to 6 weeks

Measure real AI demand, then choose PAYG, PTU, hybrid or self-hosted capacity on evidence; check agent licence costs.

Buyer: FinOps lead or CFO delegate

Trigger: Spend growing faster than usage; PTU or licence decision due

Build first: Cost model and method (15 to 25 role days)

Depends on: Customer cost data and agreement prices

First sale
$20k to $40k

First revenue
4 to 6 weeks

Value metric
Cost per useful AI task

Note: Full detail: deck 04. Fee bands use an illustrative $1,000 per role day, not a Cognizant rate.

ESTIMATE, NOT APPROVED

Landing zone: largest deals, on Microsoft’s accelerator

Assess, extend or establish the Azure foundation for AI workloads on Microsoft’s AI Landing Zone accelerator.

Buyer: Cloud platform owner

Trigger: First production AI workload blocked by platform gaps

Build first: Lab build on Azure Verified Modules (30 to 50 role days)

Depends on: DevOps owning Terraform; UK and Middle East residency gate

First sale
$15k to $30k, then $140k to $220k

First revenue
3 to 5 weeks

Value metric
Weeks to first production workload

Note: Full detail: deck 01. Fee bands use an illustrative $1,000 per role day, not a Cognizant rate.

ESTIMATE, NOT APPROVED

AI gateway: broad, repeatable demand with an MCP allow-list

One governed path for every model and tool call: API Management for traffic, API Center for which tools exist.

Buyer: Platform or API owner

Trigger: Many teams calling models directly; keys found in apps

Build first: Policy library and test harness (25 to 40 role days)

Depends on: Security identity design

First sale
$10k to $20k, then $45k to $90k

First revenue
2 to 4 weeks

Value metric
Share of AI calls governed

Note: Full detail: deck 03. Fee bands use an illustrative $1,000 per role day, not a Cognizant rate.

ESTIMATE, NOT APPROVED

Agent governance: our strongest edge, once the PoC proves it

Configure Agent 365 and the Foundry Control Plane first; add usage evidence and a stop proven in a pilot only where needed.

Buyer: AI platform leader with the CISO delegate

Trigger: Agent sprawl; audit request; an agent incident

Build first: Internal kill-switch PoC (25 to 45 role days) and catalogue

Depends on: Agent 365 licensing; Security as policy owner

First sale
$15k to $25k assessment

First revenue
3 to 4 weeks

Value metric
Agents with an owner; stop time measured

Note: Full detail: deck 02. Fee bands use an illustrative $1,000 per role day, not a Cognizant rate.

ESTIMATE, NOT APPROVED

Managed operations: recurring revenue, priced from staffing

Run the AI platform monthly: health, incidents, changes, agent reviews and cost reviews; drills once proven.

Buyer: IT service owner

Trigger: An AI workload entering production

Build first: Runbooks, tooling, roster (20 to 40 role days)

Depends on: Signed tower agreements; funded 24x7 roster

First sale
$30k to $60k a month

First revenue
4 to 8 weeks

Value metric
Incidents resolved inside target

Note: Full detail: deck 05. Fee bands use an illustrative $1,000 per role day, not a Cognizant rate.

INPUTS REQUIRED

Decide today: which offerings, who owns them, what budget

Offering	Budget	Sponsor, owner	Stop at day 45 if	Success by day 90
04 Assessment	Input	Input	no data access	two assessments signed
03 AI Gateway	Input	Input	no qualified account	one readiness sold
01 Landing Zone	Input	Input	lab build fails	lab built, one deal qualified
02 Governance	Input	Input	PoC fails a K4 test	PoC passed, stop time measured
05 Managed Ops	Input	Input	no tower agreements	agreements signed, one onboarding

Decision: Input: budget and sponsor from leadership; headcount from the delivery lead. Day-30 checkpoint; deck 00 register D1.
