cognizant

Original Microsoft reference diagrams

Unchanged source diagrams behind the editable architectures in decks 01 to 05

Moved out of the offering decks in v4.0 to reduce appendix length · kept for traceability

REFERENCES

Original reference diagrams

Grouped by offering deck: 01 landing zone, 02 agent governance, 03 gateway, 05 operations.

Appendix index

04 **01-O1** Original: AI landing zone with platform

05 **01-O2** Original: Foundry baseline

06 **01-O3** Original: landing zone networking

07 **01-O4** Original: landing zone egress

08 **01-O5** Original: CAF landing zone conceptual

09 **02-O1** Original: multiple-agent workflow

10 **02-O2** Original: agentic RAG loop

11 **02-O3** Original: Foundry baseline

12 **03-O1** Original: gateway conceptual

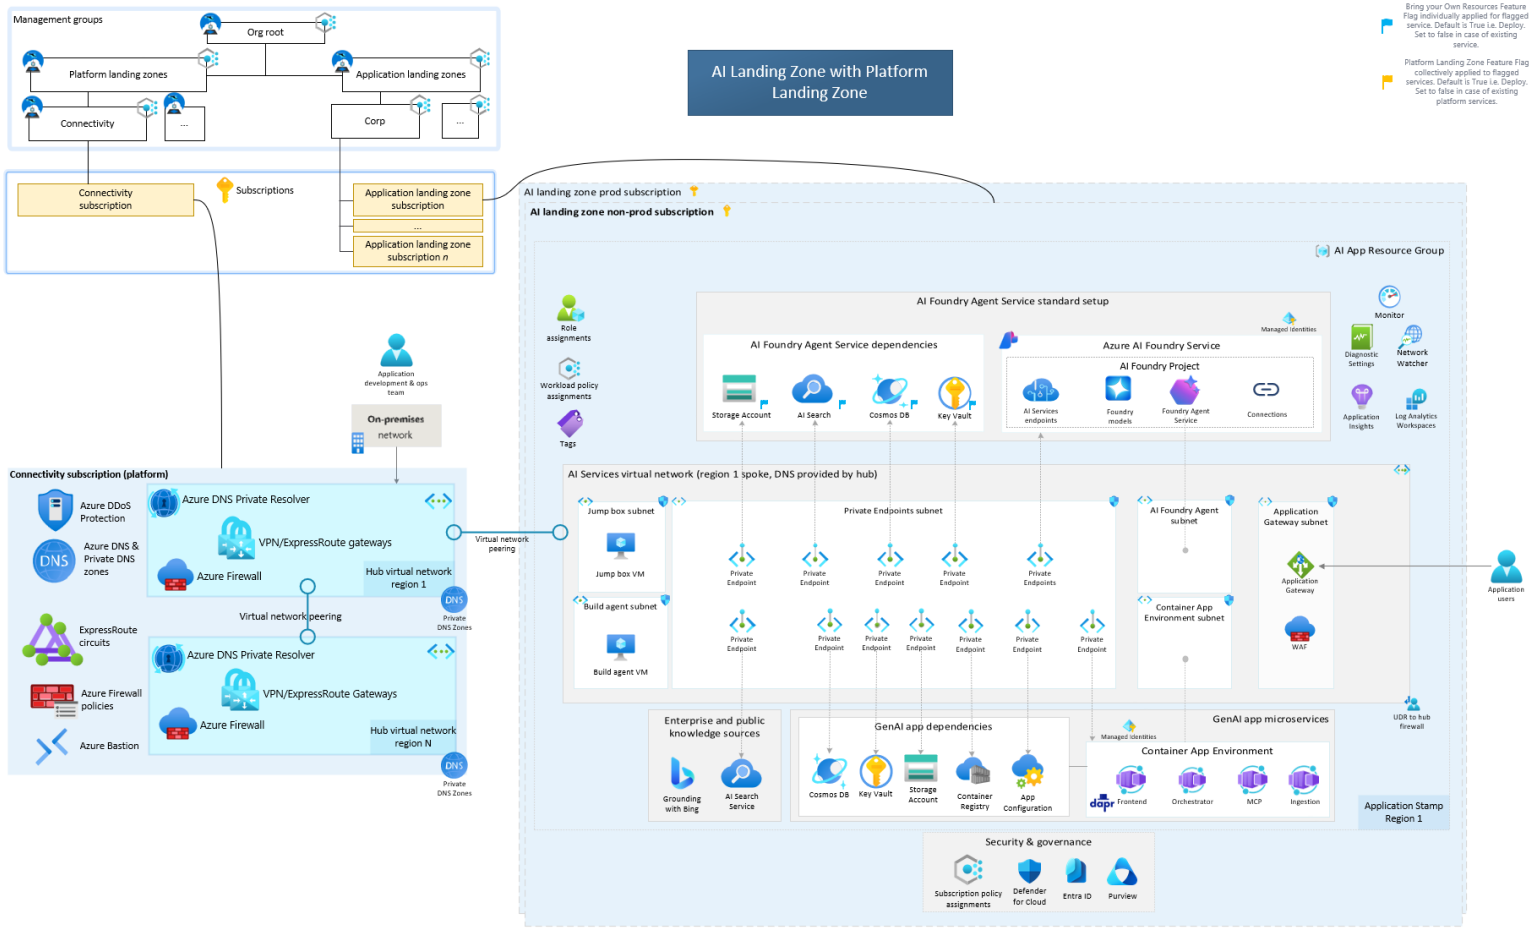

13 **03-O2** Historical: legacy identity diagram

14 **03-O3** Original: single gateway, regional backends

15 **03-O4** Original: multi-region gateway

16 **05-O1** Original: Foundry baseline network flows

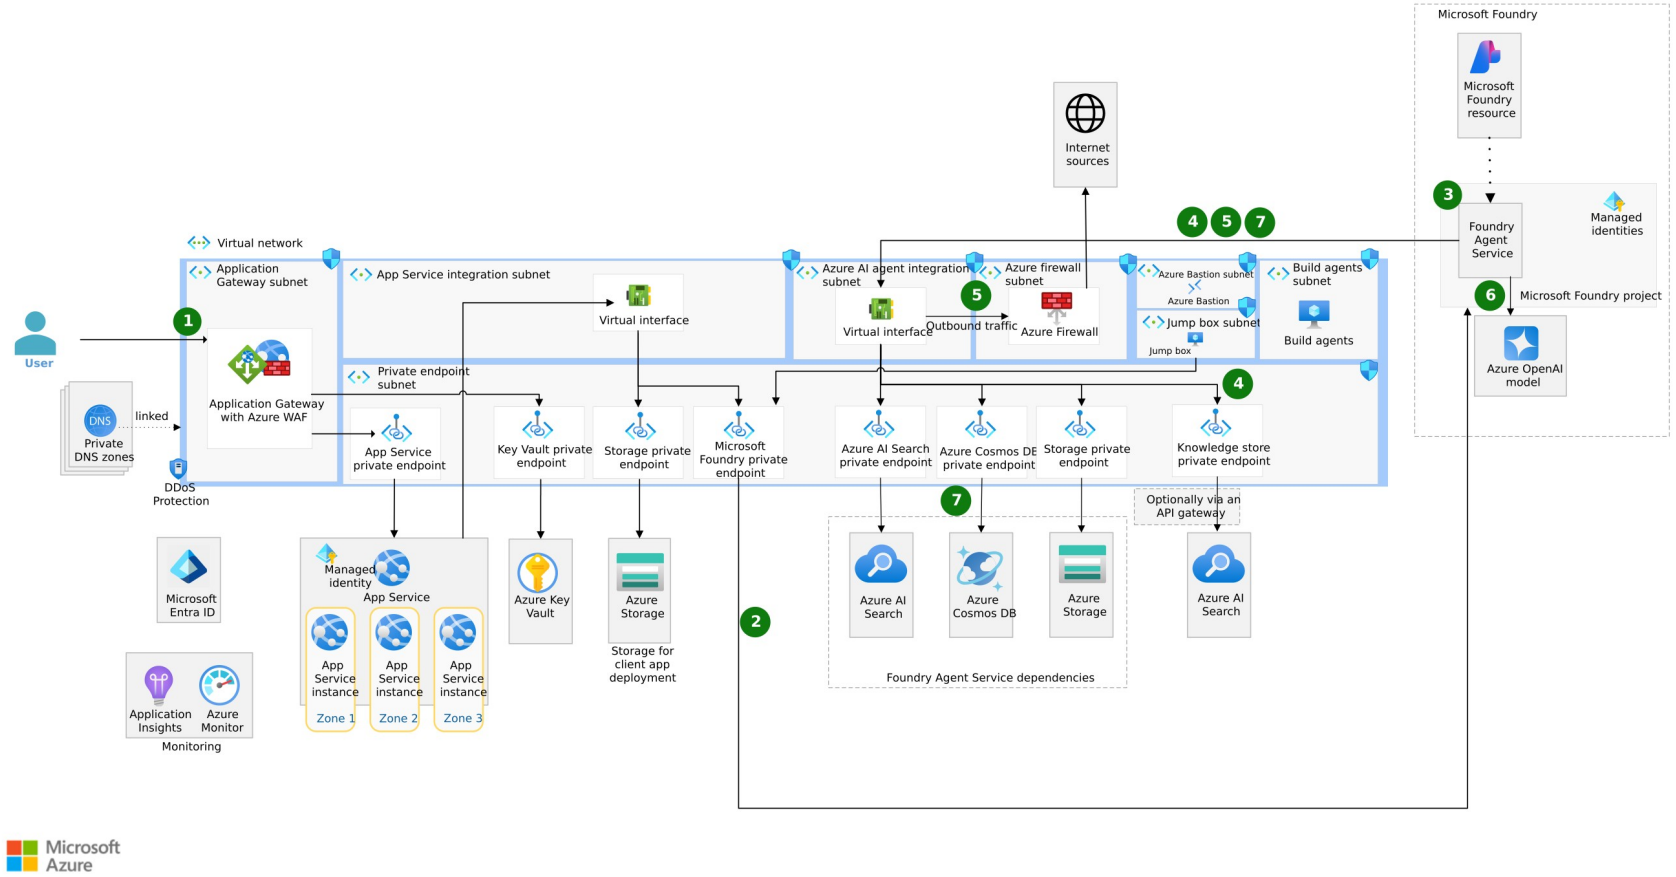

Original reference: AI landing zone with platform

Source: 04_AI-Landing-Zone-with-platform.png in the GTM repository · **Microsoft page:** link

Source labels use the earlier "AI Foundry" naming; the simplified executive view uses current Foundry names.

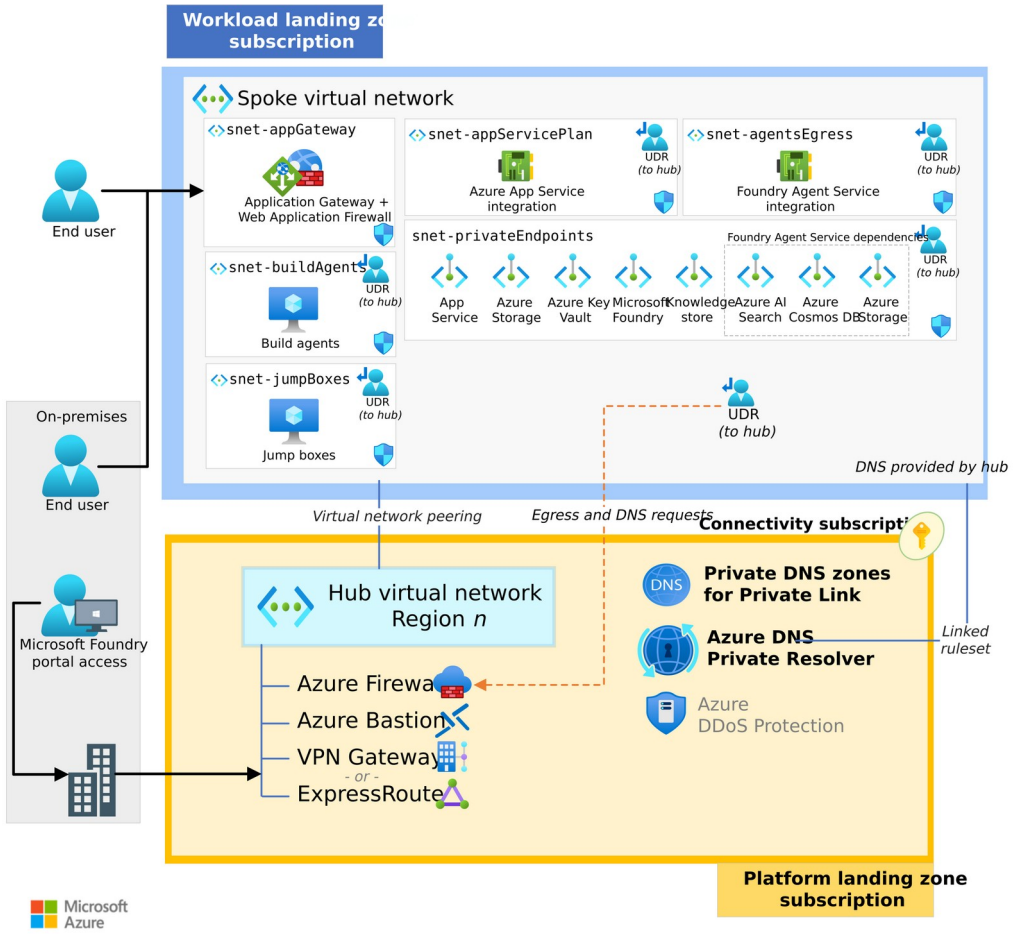

Original reference: Microsoft Foundry baseline

Source: 07_baseline-microsoft-foundry.png in the GTM repository · **Microsoft page:** link

Source shows "Azure OpenAI model"; adapted view (A8) uses Foundry model deployment.

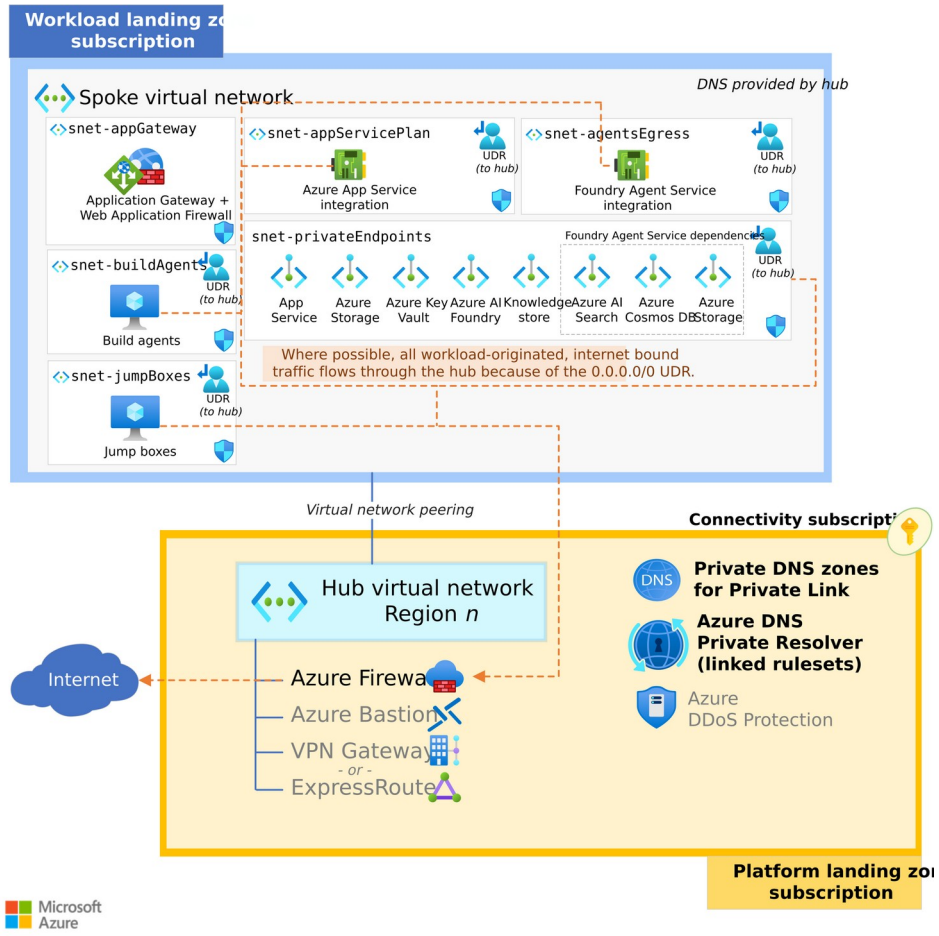

Original reference: landing zone networking

Source: 11_baseline-landing-zone-networking.png in the GTM repository · **Microsoft page:** link

The source PNG clips some labels in its own render; the editable reconstruction is appendix A5.

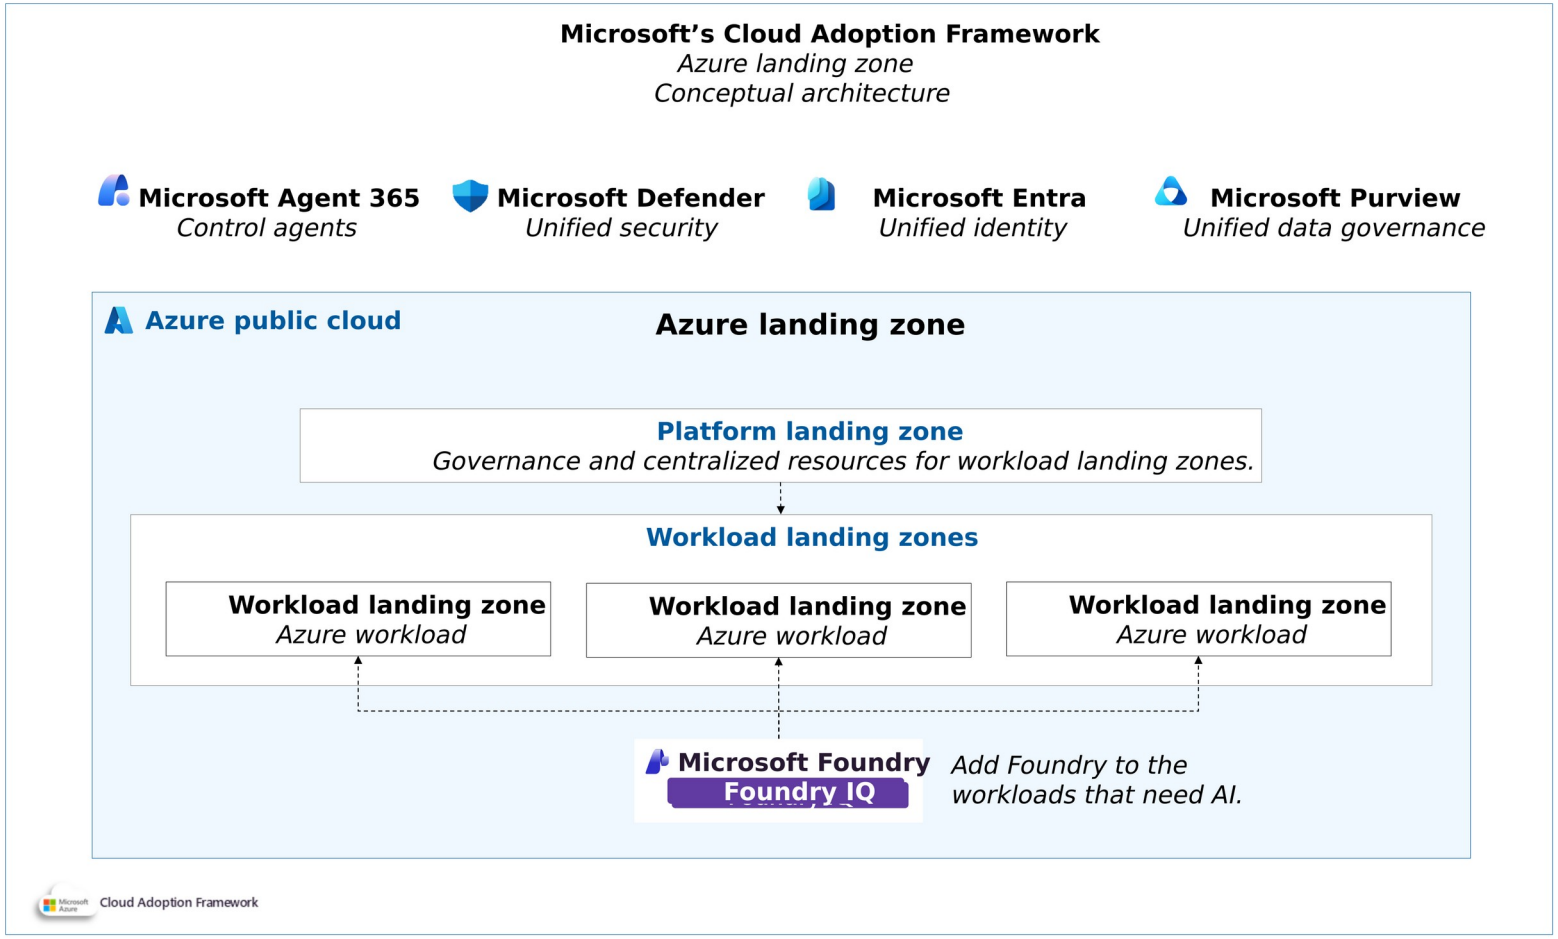

Original reference: landing zone egress

Source: 12_baseline-landing-zone-networking-egress.png in the GTM repository · **Microsoft page:** link

The source PNG clips some labels in its own render; the editable reconstruction is appendix A6.

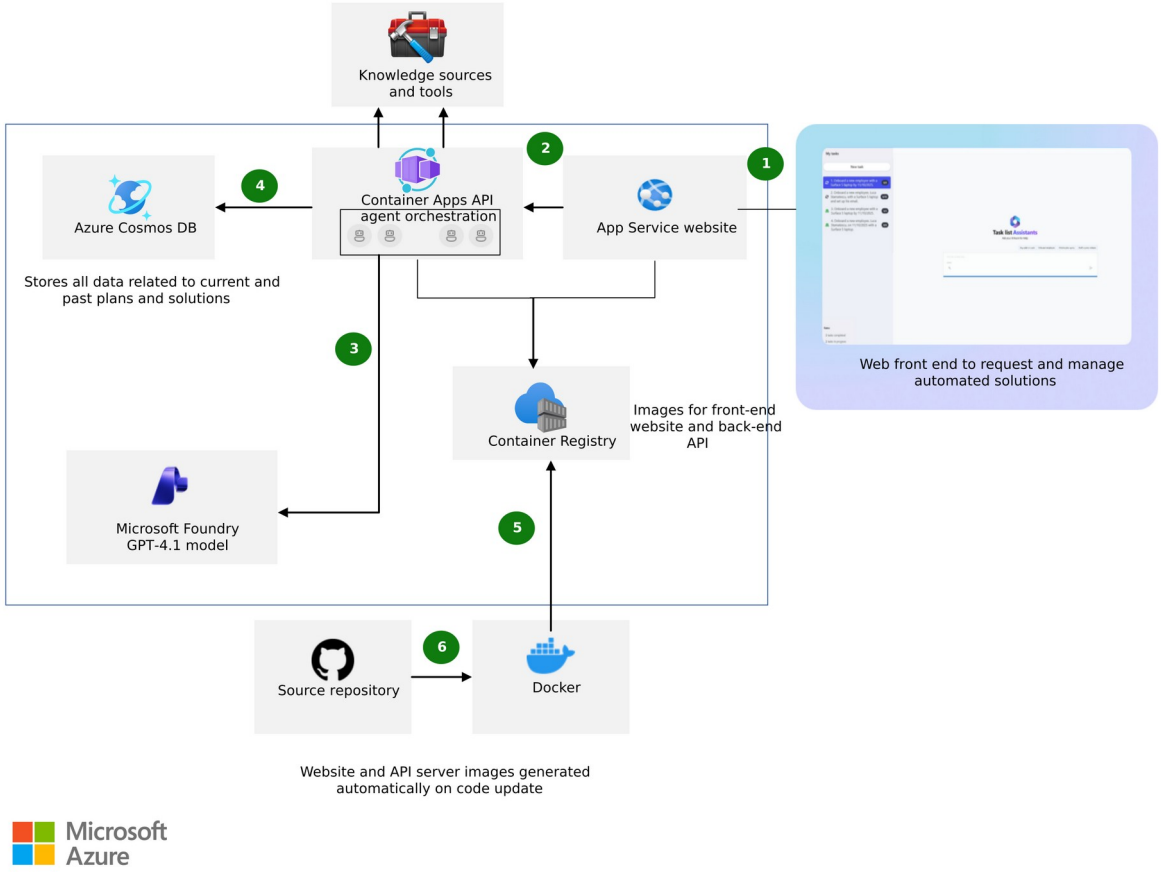

Original reference: Azure landing zone conceptual view

Source: 35_azure-landing-zone-conceptual-architecture.png in the GTM repository · **Microsoft page:** link

Microsoft CAF conceptual view showing Foundry added to workload landing zones that need AI.

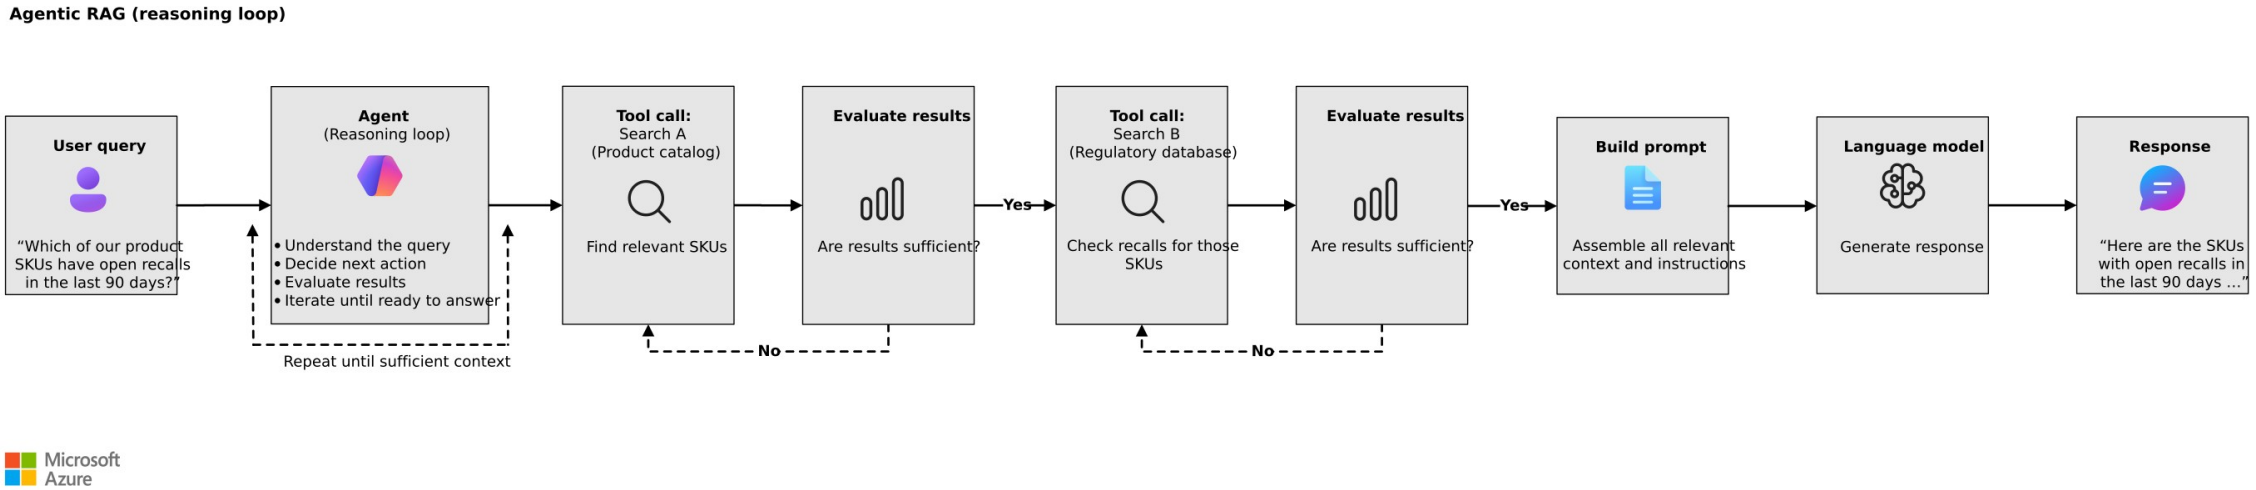

Original reference: multiple-agent workflow

Source: 15_multiple-agent-workflow-automation.png in the GTM repository · **Microsoft page:** link

Source labels the model GPT-4.1, which retires 2027-04-14; adapted view (A11) uses a generic model deployment.

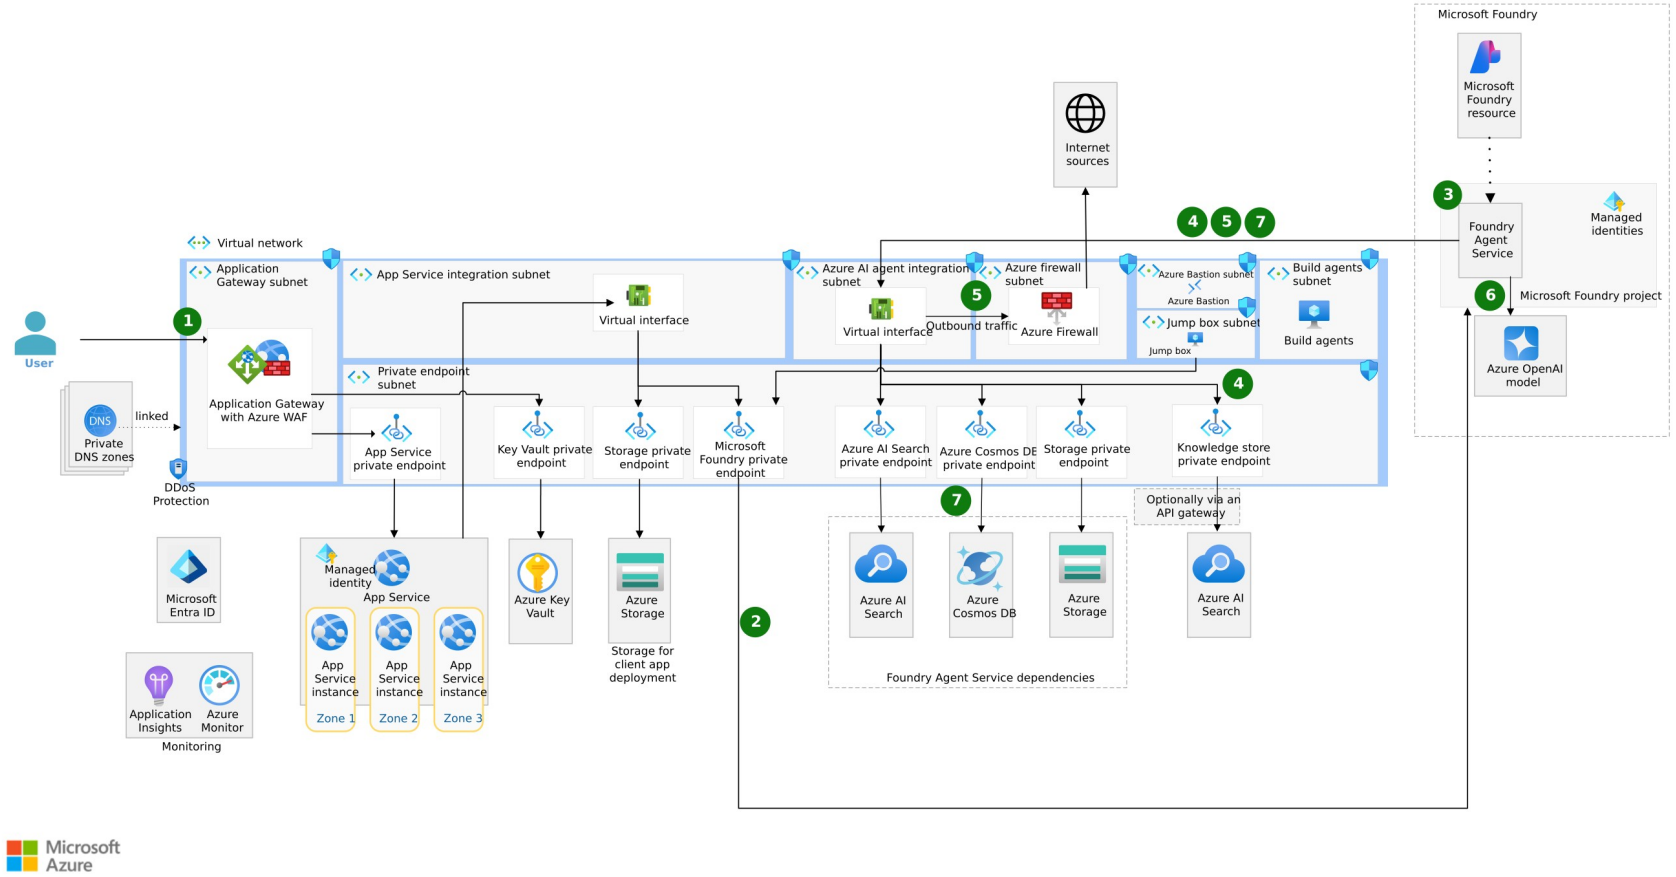

Original reference: agentic RAG loop

Source: 14_agentic-rag.png in the GTM repository · **Microsoft page:** link

Reasoning loop only; it does not show an implemented kill switch.

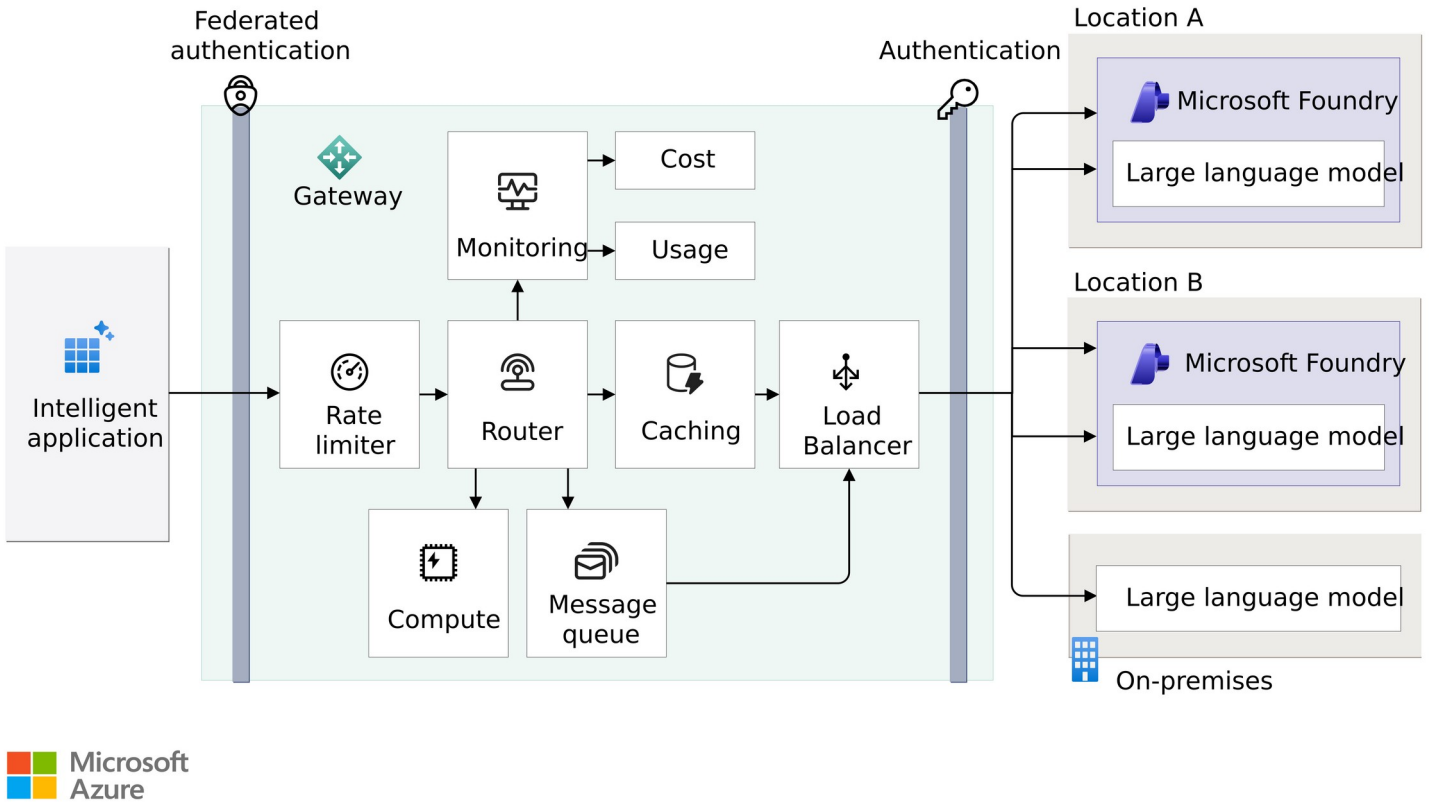

Original reference: Foundry baseline monitoring scope

Source: 07_baseline-microsoft-foundry.png in the GTM repository · **Microsoft page:** link

Use to map agent registrations, runtime, search, storage and network to monitored assets.

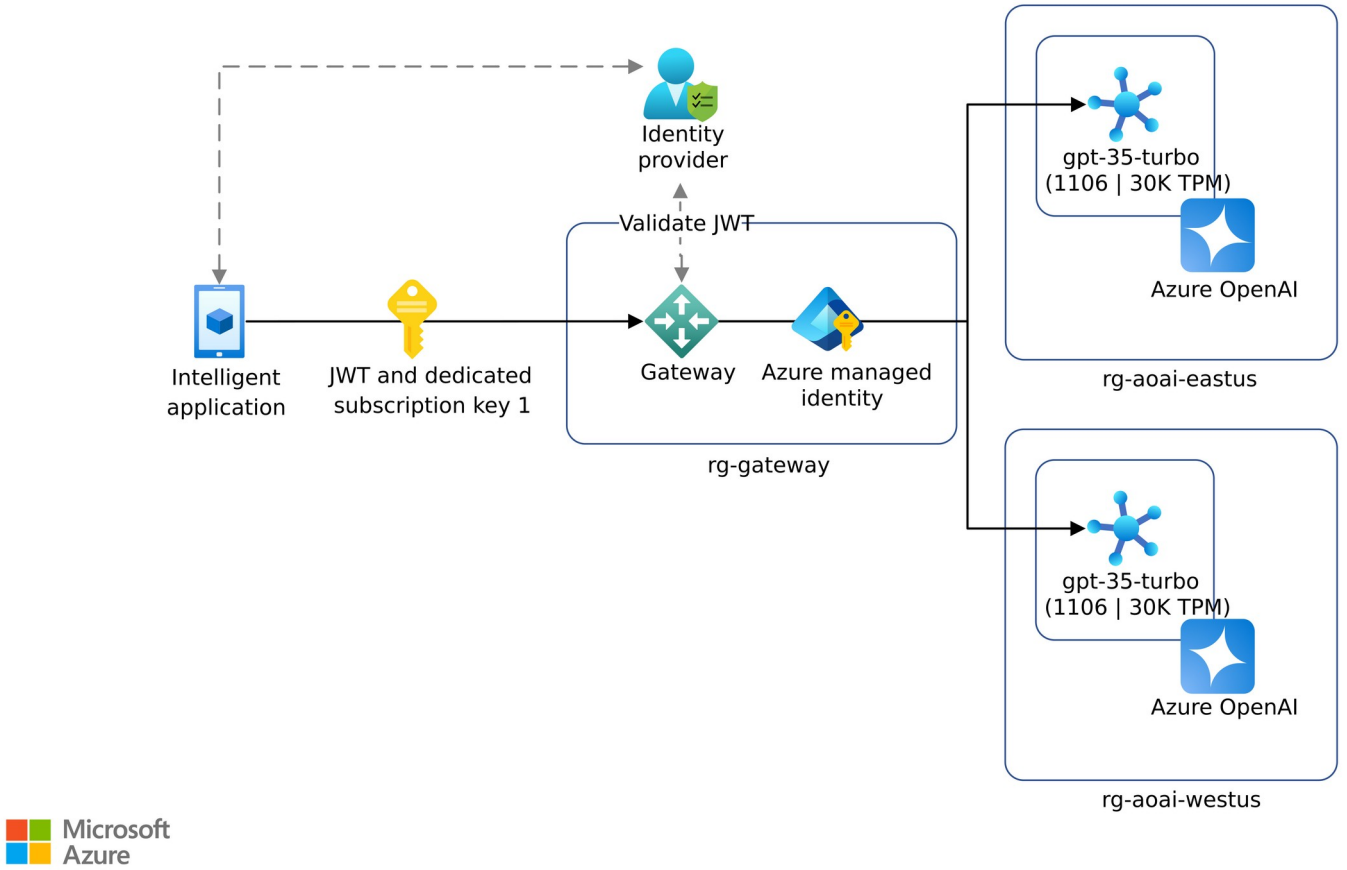

Original reference: gateway conceptual architecture

Source: 38_foundry-gateway-conceptual-architecture.png in the GTM repository · **Microsoft page:** link

Conceptual functions; queuing and compute may need services beyond one API Management tier.

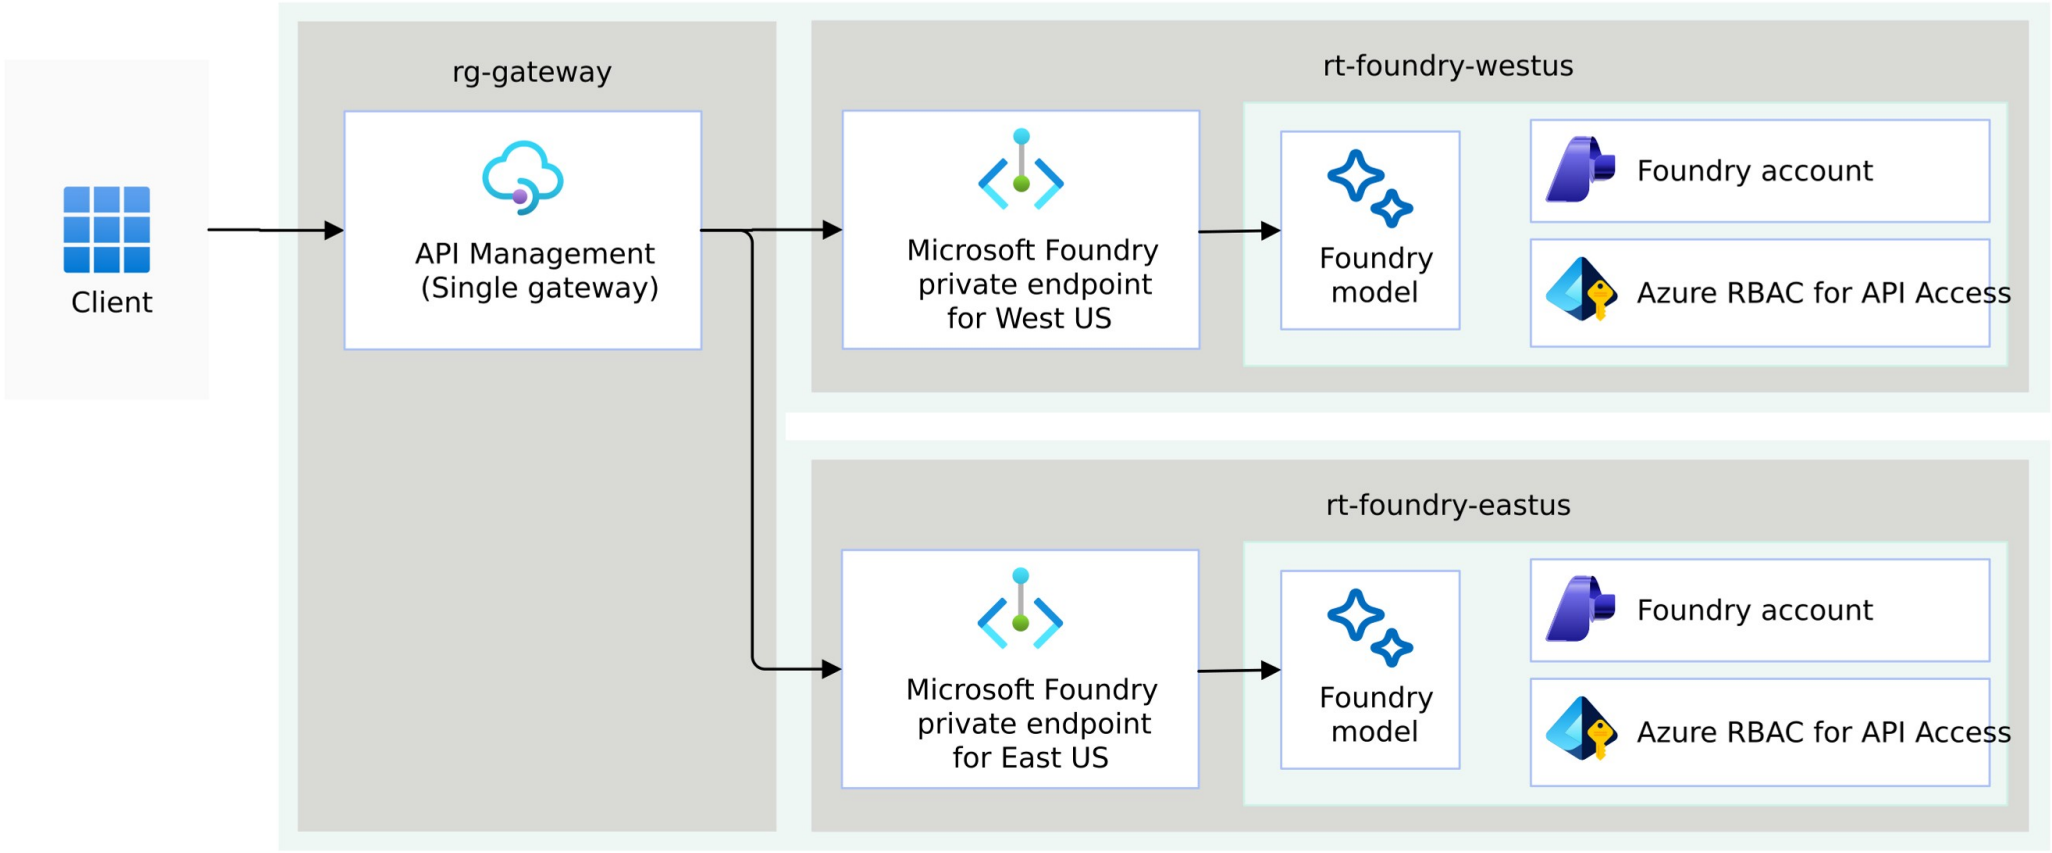

Historical reference: legacy identity diagram

Source: 44_azure-openai-gateway-identity-solution-combined.png in the GTM repository · **Microsoft page:** link

HISTORICAL: legacy gpt-35-turbo and Azure OpenAI labels. Do not use in proposals; use appendix A3.

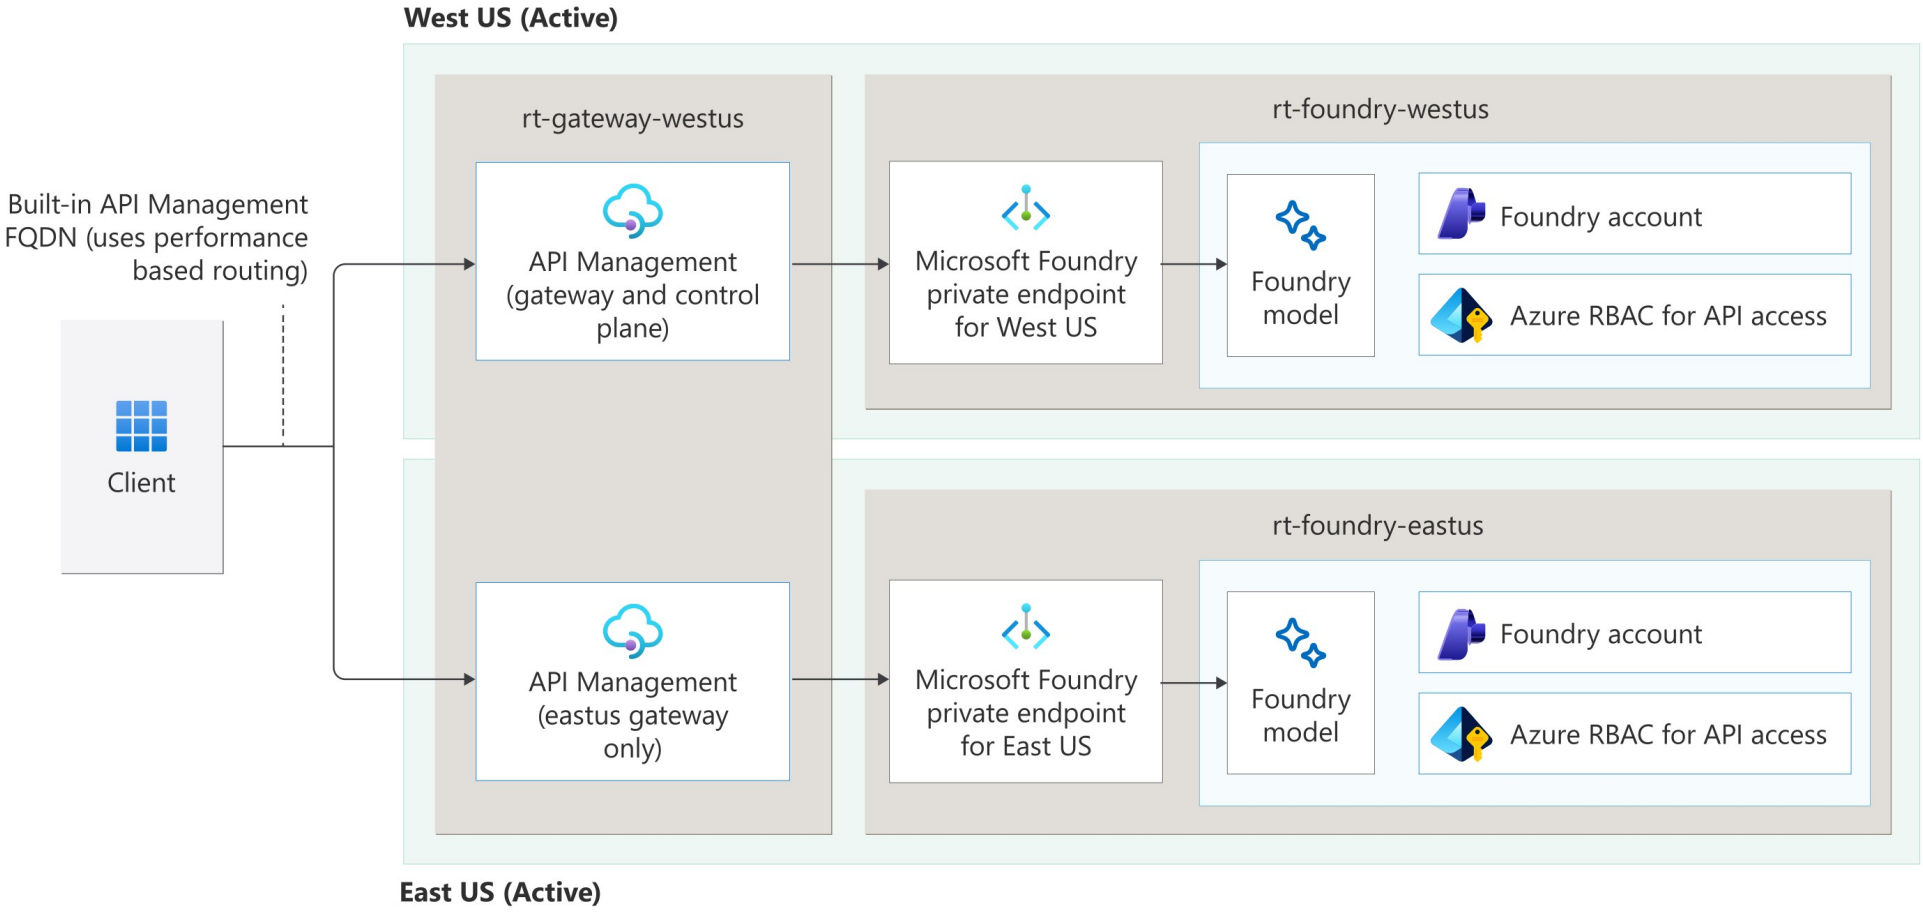

Original reference: one gateway, regional backends

Source: 20_multiple-regions-api-management-single-after.png in the GTM repository · **Microsoft page:** link

Source labels "rt-foundry-westus" appear to mean resource group; backend failover keeps one gateway failure domain.

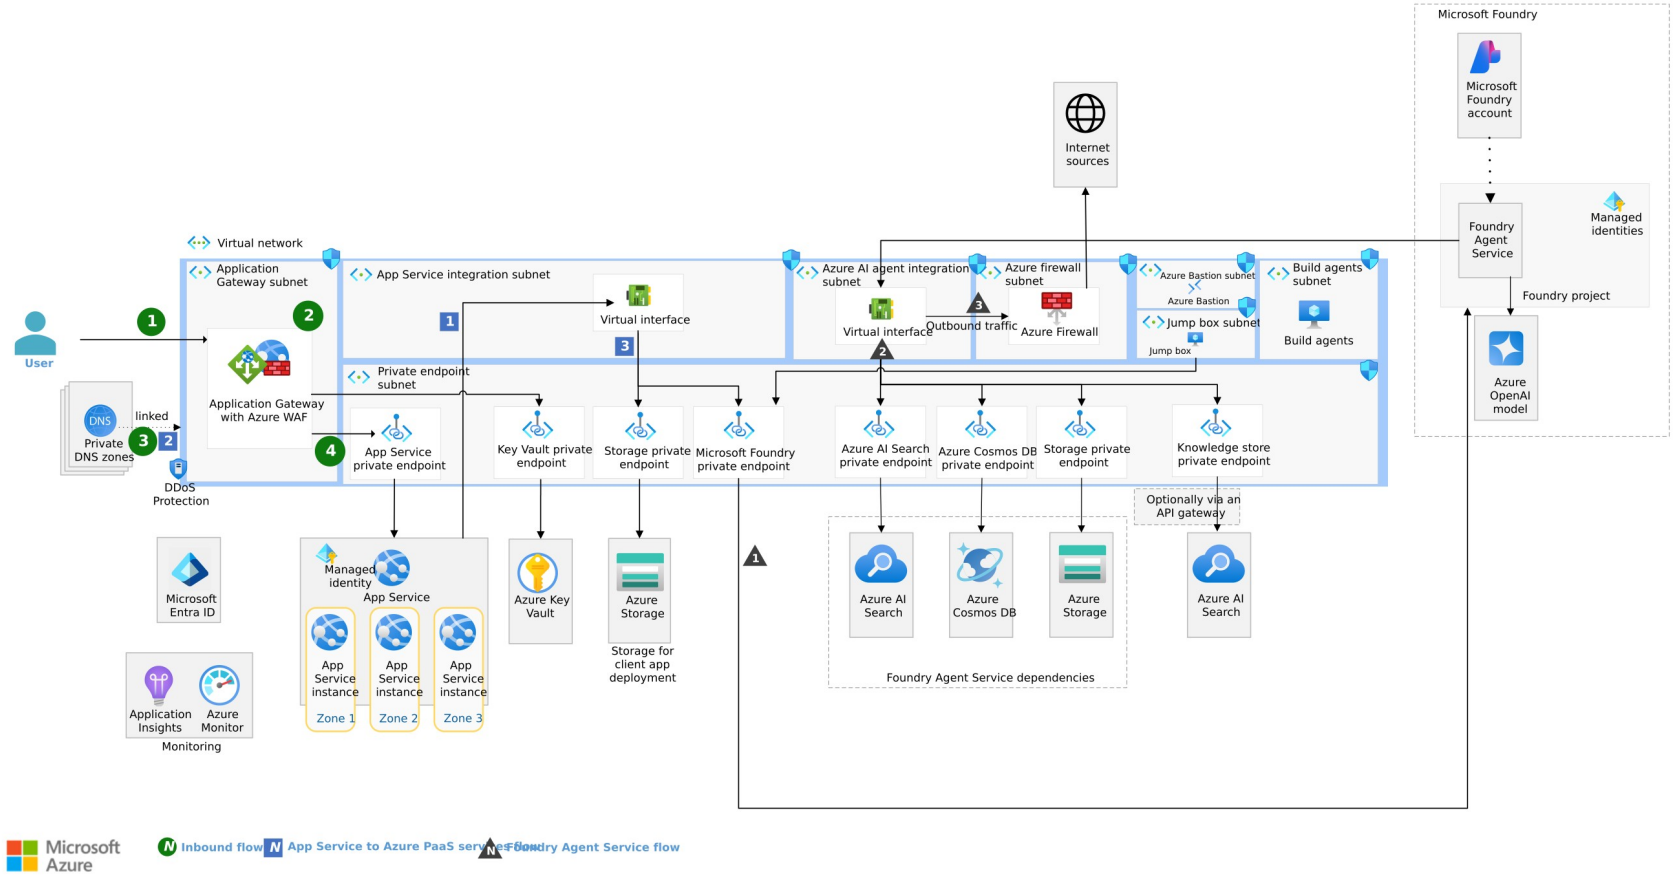

Original reference: multi-region gateway

Source: 21_multiple-regions-api-management-multiple-after.png in the GTM repository · **Microsoft page:** link

Built-in multi-region API Management needs Premium (classic).

Original reference: Foundry baseline network flows

Source: 08_baseline-microsoft-foundry-network-flow.png in the GTM repository · **Microsoft page:** link

Use to derive the monitored dependency map (A3). Source labels the model "Azure OpenAI model".
